Let's all tell the FCC we want Rich Whiten brought to justice for his jamming
and selling illeagal Amps on the internet.

>to put these controls to about 2 to bring down the carrier and once it
>starts coming down it almost jumps to 0w and same thing for the mic

ED: almost sounds like it's oscillating....Does it mainly do this on
upper bands? Had trouble with mine where the meter would peg when you
brought the gain up slightly from full off. The fix was to tighten the
screws holding down the RF board (right side top under bandswitch shaft),
and clean all the plug in connectors on the board. Not a bad thing to
do to this rig anyway as they sometimes cause trouble.

You definitely don't have to pay $200 for a power supply. You can find a new Astron or Pyramid supply for much less than that. You can also troll around on rec.radio.swap for a used one for even less. I have been in your situation a few times and just used a spare automotive battery and a cheap recharger to get me on the air until I got ahold of a proper power supply. (just don't use both at the same time!)

Will these power supplies (Pyramid) have the proper connectors for my
FT-5100 or do I need to buy some additional adapter for it?

Folks,

After some testing, I have sufficient evidence to suggest that the HRO representative was correct -- the recieve "problem" with the W32A was indeed related to intermod and desensing. I've installed a dual-band antenna on my vehicle and it works much better than the rubber duck that comes with the radio. Now the only problem is that the case of the radio gets very hot when transmitting! It happens faster on the 5W setting (as expected), but even on the 0.5 watt setting it gets too hot to hold after a moderate QSO. Is this a peculiar characteristic of this radio, or have others observed this phenomenon on other W32A's and/or other HTs? It is my belief that this is due to Icom's use of the metal case of the HT as a heat sink for the PA transistor. My older 2 watt radio has a plastic case and doesn't have this problem at all.

Any comments? I would particularly be interested in hearing from owners of other HT brands as well as W32A owners.

Thanks,

Curt Breneman

What does the SWR of the antenna look like? This sounds like a problem
that I had on a Yaesu radio with an 80m antenna that was too far from
resonance.

For your info, I bought one 5 years ago, and it's the only radio among the Maxtracs, Mitreks, and GE radios strong enough to have withstood 2 lightning strikes. Fantastic packet radio.
If you like packet they're great for that. If you bought one for voice, well you know.
Opinions are like your backside, everyone has one, and they all stink. Better to keep them to yourself.

TO: Jeff Herman, don't bother. Ain't a sole listening to you.

I have used my FT-1000MP for about two year's now. All I can tell you is
that it is one grand machine. I contest and like to low band DX. My rig
is fully loaded. I can recomend it highly.

ARE YOU BEING INVESTIGATED?

Has your personal and credit information been stolen? Has someone
assumed your identity?

Would you like to locate an old friend, relative, military buddy
or sweetheart?

Do you want to find a person's assets to collect a debt or
judgement?

Would you like to check a person's criminal record before renting
them space or giving them employment?

Would you like to fix up your credit bureau report, create a new
identity or even disappear?

Are you going to have surgery? Would you like to know how many
malpractice
suits have been filed against your doctor?

Now you can learn all this plus much, much more with our
brand new 45 page report

"INTERNET SLEUTH"!

Learn the Internet tools and resources that are used to
investigate you,
your relatives, friends, neighbors, enemies, employees or anyone
else!

We will give you thousands of Internet locations to look up
people,
credit, social security, current or past employment, driving
records,
criminal records, medical information, military records,
addresses,
phone numbers, immigration, divorce, labor and criminal laws!

We will also give you sources to find missing children and
parents,
hazardous waste sites, how to do Freedom of Information Act
information
searches, how to do skip tracing and backround checks on
prospective dates,
brides or grooms, employees, renters, vendors, new clients and
competitors!

You will also learn about and where to get surveillance and spy devices,
private mail forwarding and annonymous email forwarding sites, search
for copyrights, patents and court cases and how to make your assets untraceable! We will show you how to get copies of credit reports, adoption databases, information on drugs, poisons and how to get your share of government programs and benefits!

Can you find this information by using the Internet Search Engines?
The answer is MAYBE if you get lucky and if you want to spend many hours going through 25,000 plus hits per subject! We and our staff
have spent hundreds of hours and many thousands of dollars compiling
this information for you! Now you can have it on a silver platter for LESS THAN TWENTY BUCKS during this special email promotion!

You frequently hear over the media, television, radio, the newspapers,
how personal information is being used, traded and
sold over the Internet...usually without your permission or knowledge.
Our report will show you HOW IT IS DONE!!!

Would you like to find that old romantic flame...find telephone, address or email information on almost anyone...even unlisted phone numbers? How about your family "tree"? We will teach you how to turn years of work into hours of fun!

Military? Check Army, Navy, Air Force and Marine records.
extensive Vietnamese war records, MIA info, much more!

Looking for a job? Find the job you are seeking...even in another state
or another country! We will teach you how!

Looking for a new love interest or spouse or even sex partner?
We will show you where to look for fast results!

Want up-to-the-minute health and medical information? Learn how to
cure fears and phoebias, the latest drugs and treatments for almost
any ailment or desease from the drug companies themselves as well as
from universities and the Center for Desease Control. Want to learn
the most effective way to loose weight? It's all here in our report!

If you believe that the information compiled about you should be as
available to you as to the people that compile it about you without
your knowledge or permission than you must order "THE INTERNET
SLEUTH REPORT" immediately!

Our "INTERNET SLEUTH REPORT" is normally sold by direct mail for
$39.95 and will soon be in book stores for $29.95. However, to
generate publicity and "get the word out" we are making this
10 day Email Special Offer of our Complete 45 Page Report for
only $19.95 plus $3 for shipping and handling [total $22.95].
Sold with our 10 Day Money Back Guarantee!

This is the biggest bargain on the Internet and the information it
will give to you will give you great power! It can really change your
life in a positive way. Order Now!

The Complete 45 page "INTERNET SLEUTH REPORT" only $19.95 plus
$3 shipping and handling - total $22.95. Shipped in plain wrapper
by First Class Mail.

Add $5 for priority mail delivery. Add $20 for overnight Express!

We accept Visa, MasterCard, American Express or Discover.
We can also accept your check by phone or Fax.

John,
Wish I could help but I am in Ohio. Stick with it and listen and pick your spots to get in, like just checking into a net with no traffic. I would like to still be able to use the term QSO in 10 or 20 years, but am afraid if we don't get new hams in and accepted there will be no one to talk to. Don't give up--a lot of new hams do and that is a great loss to the hobby. Keep up with ham current events (like through reading QST, CQ, and using the ham-related web sites) and you will have plenty to talk about, outside of just what you like about life. Good luck,

Chris WO8USA

18. KENWOOD TS430

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-01 00:00:00 UTC
From: latin31@aol.com
Message-ID: <19981001002800.07221.00000667@ng106.aol.com>
Source record: 160903

I have a TS 430 radio that has a problem with the out put power when transmitting on SSB. When I first start operating the radio it works okay, but after few seconds of operation or some times after few minuts the the out put power goes dow to just few watts.

Does anybody have any ideas on how to fix this problem?
Please send any replay to Latin31@aol.com

Thanks
Jose (KC7KXN)

I've recently bumped-into a new "net-speak" word
I just had to share with you. The spirit of the
radio arts lives on in the "new" communication form.

nether: (nee'-ther) noun; derived from "net-ether";
analogous to the "ether" of physics, a rarefied fluid
or field once thought to be infused throughout the
universe and to be the carrier of all forces,
such as radio waves. The nether is the ocean or
stream of "internet" or global network data,
taken as a whole.

Useage:
"The competitors have a new marketing plan.
Get in the nether and find out about it."

"Where ya been all evening?"
"Oh, been sailin' the nether."

(as salutation)
"Yours from the nether,
Becky User"

Pretty neat, huh?
And cooler then "cyber-" anything.

Even today when tech is going super-sonic,
Old Radio Lives!

==========

I had the same problem, and can tell you how to fix it.

The RF power transistors are riveted to the Printed Circuit Board, and
the connection goes to high resistance/open circuit intermitently.
The fix is to solder those connections. Full details are below.

Below are several other items of interest pertaining to the Kenwood
TS-430s.

--Scott, KD5CAS

==========

KW TS-430 TX probs

----------=
This sounds suspiciously like a problem I had with my 430 on voice.
It would behave quite similarly, losing power and becoming distorted
on an occasional basis. There was a well reported problem with early
430's where the finals were riveted, but not soldered, and the rivets
could eventually develop a high electical resistance, with ensuing
power problems. This was diagnosed and corrected by Kenwood early, so
I doubt it would be a problem in a unit manufactured as late as yours.
(I bought mine in late 1984, and it already had a modified PA --
believe me, I checked!)

My problem turned out to be a marginal connection in the internal
switch on the XVTR jack on the back of the rig. This is the connector
with 8 pins. The switch is integral to the connector and works when
the plug is inserted. The fix was to insert and remove the plug in the
jack several times. Since I have done this, my 430 has never shown
this symptom again.

==========
To all Kenwood users:

The 430 has a corresponding problem to the older rigs:
specifically the 520(S), 820(S), 530S, and 830S rigs....

Power drops while running... if this occurs, tighten the screws on the
driver board and IF board.

Had this happen to me and friends a few times...also watch out for the
coax connector on the back...they get loose too...no lock washer on
the back
.--

I had a similar problem with a 430. Mine was intermittent. Finally one
cold day it became permanent. I traced my problem to an open via
connection on one of the final transistor bases. This resulted in that
device not getting a dc return to ground. I re-soldered the via to
my success!

I found it by checking dc bias on each final transistor and found one
being different in voltage reading.

==========
KD7EV advises intermittent power output problems on his '430 was cured
by installing a more conventional nut on the rear panel UHF style
antenna connector. Apparently a faulty ground connection at this
point caused a change in the VSWR which affected the sensing circuit
and thus reducing the RF output power.

------------------------------****

Subject: TS430S intermittent power output

A recent bulletin, from WA2PAY, asked for help for a TS-430S which had
intermittent power output; it would suddenly drop to ten watts, then
go back to full power on its own. Interestingly enough I just
recently fixed a TS-430S which had precisely this symptom. The
intermittent nature gave me fits, since there was nothing I could do
to it to make it come and go. I tried heat (hair dryer and running
the rig under a towel on the bench), cold (overnight in the fridge),
beating, pounding, thumping, probing, all to no effect. The problem
finally turned out to be bad feedthroughs in the base circuits of the
final amplifier. The base leads of the finals are soldered onto PCB
foils on top of the board. They go nowhere else on the top. The
signal is carried through the board to the foils on the bottom sides
by some feedthrough rivets. When I lifted out the final amp PCB, the
bad feedthroughs were immediately obvious. (I have been fixing bad
rigs for years and years, and solder joints are always a prime
suspect). There were some very obvious cracks in the solder around
them, and they were only making contact intermittently. Soldering
them with sufficient heat and solder cleared the problem. I also
found a few bad solder joints on other parts of the PCB, by the way,
but the ones on both final amp transistor bases was the main cause of

the trouble. By the way, if I kept the key down continuously while
the rig was in the ten watt mode, one of the base resistors eventually
started to smoke. If you have this problem, inspect all the resistors
in the base area of the final amp PCB for signs of overheating. In
many cases, they will be burned. Over the years I have cleared a lot
of problems in a wide variety of Kenwood rigs, both HF and VHF, by=20
resoldering PCB connections. It never hurts to give the evil eye
to the solder side of PCBs when you have problems.

Why don't you tell us where this is on the RT Systems' Web site Clint. When I bought a VX-1 FROM RT Systems at a hamfest I couldn't get any sort of a break on the software. They didn't have any of their "upgrade" kits with them so it was $20 plus $6 shipping. Load a copy on the computer I had with me for the radio I just bought Ha. So tell us Clint where is the free upgrade.

Here's my two cents:

I "tried" to use mine with both a 1/4 wave and a 5/8 wave mobile antenna (both have gain, the 5/8 is around 3 db for 2M) and it made the receive signal worse. However, my signal getting out improved and I had signal reports that I was making the machine "full quieting." I was on hi power into a hi-level machine (5000+ft) that is 40+ miles away, driving down the freeway. The received signal was SO bad, I opted to use the stock rubber duck instead. On 70cm, the gain antenna worked flawlessly. Go figure. I just figured that it was overloading the receiver with too much signal.
I've also got a Comet CH-72S rubber duck that supposedly has some gain. It also makes the 2M signals sound kind of scratchy. Maybe we should get a collective list of W32A owners and contact Icom for a solution/explanation? There's strength in numbers...

Get a HAM (Amateur) radio license, (pass 2 easy 30 question tests - no morse code needed), get a 2 meter radio, and find a HAM radio club that has a "phone patch" hooked up to their repeater. Then you can make calls of a personal nature to a telephone without having any kind of phone service. I know people who get by this way, using this as their only phone service, and once in a while, augmenting it with the use of a pay phone for long distance calls. (with a phone card). You can free yourself of fees, but your quality of life will suffer.

October 1, 1998
Target: rec.radio.amateur.policy

Have you filed your comments regarding W.T. Docket 98-143 yet? Comments must be filed with the FCC by December 1.

In the proposal, the Commission calls for several changes to the amateur radio licensing structure, including reductions in Morse code requirements for high frequency operations.

I believe that both the FCC and ARRL proposals are bad news for amateur radio ... and I am a Technician class operator! I am strongly opposed to any "watering" down of the licensing system. It is too easy as it is now. I have worked hard over the last couple of months to prepare for my upgrade. It is a struggle. However, to reduce the requirements even more would be detrimental to the hobby that I truly enjoy. It would surely be a step towards the end of Morse code requirements altogether.

Just look at what happened to the citizen's band, when licensing was eliminated. Citizen's band used to be a decent band, where one could enjoy a good conversation with someone, without interruption. The band is a hell-hole now, and the FCC has pretty much given up on any form of enforcement. I do not want amateur radio to take that road.

Enclosed is my letter to the FCC on this matter, and I would urge others to write letters as well. Let the Commission know how you truly feel on this matter.

You can email comments to fccinfo@fcc.gov, but I find that is usually best to mail them directly.

73 de,
Dan/W8MMQ
w8mmq@juno.com
http://www.qsl.net/w8mmq/

September 30, 1998

Honorable William E. Kennard
Chairman
Federal Communications Commission

Board of Commissioners
Federal Communications Commission

Re: License Restructuring in the Amateur Radio Service

Dear Mr. Chairman and Commissioners:

I am writing, on the behalf of the Radio Society of Central Michigan, to express my strong opposition to recent proposals released by the Federal Communications Commission, and the American Radio Relay League, with regards to the amateur radio licensing structure.

I feel that the license restructuring mentioned in both proposals will not benefit the amateur radio hobby, and in fact, I believe that it could prove most detrimental, in the long run.

As it stands now, the requirement of Morse code testing acts an effective "screen" for the amateur high frequency bands, and by lessening the requirements for Morse code, these high frequency bands would be exposed to increased activity that could prove most harmful to the hobby. The
Federal Communications Commission has already failed to take action against certain licensed radio amateurs, operating on frequencies such as 3850-kHz, 3950-kHz, etc. How does the Commission propose to enforce the amateur radio spectrum when they allow for much easier access to these frequencies, where inappropriate activity will only increase? The problem will grow continually worse, and when there is very little or no action taken now, there is no reason to believe that there will ever be.

The current licensing system should be left alone. There is no need to change the current system, which has worked successfully for so many years. The minimum Morse code requirement for high frequency privileges should remain as 5-WPM; for General class license privileges, 13-WPM; and Extra class license privileges, 20-WPM.

I feel that this proposal, along with other proposals recently submitted by the Federal Communications Commission, represent great harm to a hobby that I thoroughly enjoy. There are other ways of heightening interest in the hobby, and attracting new licensees, and reductions in Morse code requirements is certainly not one of them.

I propose that the Commission withdraw its recent proposal, and concentrate on more important matters, such as enforcing the clearly illegal activity taking place on certain frequencies throughout the amateur high frequency spectrum. You will only create for yourselves a greater problem than the
one that already exists.

Thank you,

Daniel Hicks, Jr.,
President
Radio Society of Central Michigan

If people are putting so much time into thinking a-priori about the legality of transmitting on police frequencies in an emergency, I have to wonder if this is not being driven by fantasies of being a hero someday. This type of hero complex sets off some warning bells in my head - namely that it will cloud the very judgement that's required to determine that you really have looked for every other means possible or that life was really in danger. ("Hey, maybe I can tell them that I thought running across the street to use the phone would waste precious seconds" will not likely cut it in your defense).

For me, the answer lies as follows: If and when I get into a situation like this, the litmus test would be that the situation at hand is so grave that I'm willing to take my chance and risk my HT and fines to transmit on police frequency. If I can be true to that, then there's probably a good chance that the authorities will see it that way too. If you save a life and they really don't see it that way and you lose your HT, at least you saved a life (maybe your own). It's kind of a hedge. I would be prepared to lose my HT to save a life and not look to be praised on the front page of the local paper with my HT in my hand.

But I really don't understand all this pre-meditation.

> bothered. Any contact or replys would be appricated.

No way I can QSO on 2 meter (I don't have one) but I think what
would really help you is to find an old timer who is willing to help.
You can learn a lot from an "Elmer," and once you make contact with
someone who is willing to take on that role, you may not be able to quiet
them down. ;-)
You might consider looking for clubs in your area and going to a
few of the meetings. Talk to the folks and see what comes up. Another
thing to do would be to go ahead and continue making contact on the
repeater. Let everyone know that you are new -- my bet is that you will
find more understanding that impatience.
Keep trying, it gets easier faster than you would expect. Like
everyone else, I remember my first QSO (which was very recent). It was
CW on 15 meters and I felt like an utter idiot. I was fortunate to get
the name, call sign and RST. It gets easier with practice.

>really sure you know what you are talking about?

Clint are you for real. Climb down off your high horse before you fall
and hurt yourself. The upgrade kit to ADMS versions before "D" consists
of new software and a 2 ring 1 tip to 3 ring 1 tip adapter. The
original poster was looking for the software upgrade only because he,
like myself did not need an adapter. To answer your question yes I do
know what I am talking about but apparently you do not. Just because
you do not know about soemthing does not mean it does not exsist.

>
>> So tell us Clint where is the free upgrade.
>
>Sorry you have so much difficulty navigating the Internet and talking
to
>customer support representatives.

I have no difficulties do a little research before you come down on someone you make less of ass out of yourself. Vendors are not always right Clint no matter what they tell you down at the Chamber of Commerce.

Hi,

Just bought myself a mobile Yaesu FT-5100 from the last swap meet to use a base station (per recommendations from this NG). How in the world do I get power to the radio?? It comes all the accessories and cables for the car. No AC adapter or anything of sorts.

The manual mentions an optional FP-700 power supply/speaker for base station operation. I called the local Ham shop and they want $200.00 for it. Ouch!! I can't afford that. The manual also says that it requires 13.6VDC and at least 12A. The DC transformers they sell at Radio Shack only rated at 0.5A.

Please help... 73, Jeannie

My t34sra works just fine all the way below 440. Like the Mitrek, If the
front end filter bolts get too short, go to the hardware store- 8mm coarse.

I had a buddy at a two way shop program the prom. Usually $100 but they had
a surplus of the 16ch chips & it wasn't missed.

You've been slammed!

Many carriers contract through AT&T, they got a hold of your billing info
and started billing you (and me) "directly" claiming that I was already a
AT&T customer. The truth was, I was doing my business with GTE, and made no
deal with AT&T. I called GTE and bought one of their LD packages that bills
for individual calls, and told ATT I would no longer deal with them. I don't
appreciate getting a bill for NO usage.

Watch out tho' they're mobsters, and probably own your HMO and will have you
killed next time you go in for a flu shot.

Unfortunately, this does require the purchase of an external power supply to convert the 110 volt alternating voltage in your wall to the required 13.8 volt direct current for the set. These power supplies can also be found for sale in the news group or on other sources from the Internet. A power supply capable of supplying 12 amperes (constant) should be under $100 new and around $60 used. A very common (and good) manufacturer is Astron. Make sure when you look at a power supply that you look at the rating which is commonly given in two terms, intermittent duty and continuous duty. A power supply that is rated at 7 amperes continuous is often rated at 12 amperes intermittent. Check the info to see which you need.

Many of your questions are contained in the Users Manual. Looks like to need to buy a copy for $15 and have it ready. The price of a set of tubes is more than 5 times the cost of the manual. If you are going to operate a classic rig, the manual is a must. There are other posts in this newsgroup on info you want. Do a PowerSearch for the term "FT-101 FT101" matching ANY terms. Follow the threads. 99% will answer what you are looking for.

Until then: Here is a scan from the Yaesu FT-101 Service manual:

You have to look a bit further than the end of your nose to see the problem.

The average age of HF licensed US amateurs is 63. As of the last FCC database giving date of birth information, that average age was rising at a rate of nearly 1 year per year. What that tells us is that not enough younger people are entering the ranks to keep the average age of the group stable.

Now project that trend out 11 years. The average age will then be 74. 74 is the average age of mortality for US white males. That means half of current HF licensed amateurs will be dead in 11 years, and most of the rest won't last much longer. In 20 years, nearly all of them will be dead, and they aren't being replaced at a sufficient rate to prevent a population collapse of HF amateurs.

To prevent a population collapse of HF licensed amateurs, we have to stablize the average age of the group. That requires attracting enough younger people to counterbalance the effect of aging out to mortality of current HF operators. We currently aren't doing that.

To keep the HF licensed population stable, we need to replace the losses the actuary tables tell us will occur. But our current upgrade rate is only one fourth the rate needed just to stay even, and most of those upgrading are themselves older people. So we continue to march toward that demographic cliff 11 years ahead. Ideally, we'd want to do more than stablize the average age, we'd like to lower it to something closer to the average age of the general population, which is currently 35.5. That would ensure the health of amateur radio.

Of course we're unlikely to get it that low in the next 20 years because amateurs tend to stay licensed for life, and there are no infants being licensed, so the average age will be higher than that of the general population for the foreseeable future. A target value in the range of 45-50 is a realistic hope, however.

As a side note, the average age of HF licensed amateurs in 1963 was 29. That was a result of the very large number of younger people who became licensed in the 1950s (most via high school radio clubs). They easily offset the number of hams from pre-war days who were seniors. Amateur radio was demographically younger than the general population

in those days. For that to happen again today, we'd need at least 10 times as many people under 35 to become HF licensed as are currently licensed, ie about 3.6 million. That's not likely to happen no matter what we do (short of handing out licenses in maternity wards), so we can expect the average age to remain relatively high until the demographic bulge represented by those who became licensed in the 50s and early 60s pass the age of mortality.

But we have to stop the average age from increasing, and at least make modest progress in lowering the average age, if we hope to have a viable population of HF amateurs 20 years from now. We can't afford to wait very much longer to start this reversal either. Every year we wait, the larger the number of new amateurs we'll have to absorb each year will become. If this annual number becomes too large, we won't be able to integrate these new amateurs into our social order, and the character of amateur radio will change radically.

That's what most current amateurs seem to fear most. So it behooves us to reform HF licensing now in such a way that we'll at least quadruple our annual upgrades. If we don't, we will have to accept annual increases on the order to 10, 20, or even 100 times the current rate as the years go by or face extinction of HF amateur radio. I don't think we can handle those latter sorts of increase without sharp social changes, and at least for me the prospect of extinction of HF amateur radio is an unacceptable alternative. So we'd better reform licensing now while the increases are still within the parameters of what we can absorb.

Just wanted to know what happened to the ICOM 756? It seemed to be the
all singing and dancing black box for all of two months then it vanished
into a black hole or up its own proverbial ant socket. I noticed that
most retailers could not wait to get rid of their stock fast enough
offering heavy discounts. Surely large companies such as ICOM plan
longer production runs than a few months or is it the financial
considerations that abound these days in Japan and the far East?????
What say???

Keep up with the studing and soon you will have it. Just a thought, is there
a club or school in the area that is giving instructions on getting a ham
license. I know here is the Dallas area the local Jr. College gives classes
and also the Alcatel club is having classes and then having a VE session
after words. Gud luck and hop to hear you on the HAM bands soon.

David

I got my license in 1957 at age 14. If computers and the net were around then I doubt that I would have taken the time to study or learn the code. And the high school ham club would surely have been a computer club instead. Computers also satisfy the tinker urge. Even as you make the license easier to obtain, I doubt that the numbers will improve that much. I hope I'm wrong, but I doubt it.

To all radio amateurs

SB PROP ARL ARLP040
ARLP040 Propagation de K7VVV

Solar activity was down a bit last week, with the average solar flux off by six points and average sunspot numbers lower by almost 27 points.

Now that September is over it's time to look at some long term trends. The last quarter of 1997 had an average solar flux of 94.3. The next quarter, January through March of 1998, the average flux rose to 98.8. The second quarter of this year the average flux was 107.8, and this last quarter the average flux was 129.2.

The average flux for September was 137.7, and for May through August it was 106.7, 108.5, 114.1 and 136. The average flux over this past week was 125.6, and for the same period one year ago it was only 88.2. We can see that the general trend in solar activity is up, although there was only a negligible increase from August to September.

Last week the really active geomagnetic day was on Friday, when the planetary A index was 121 and the planetary K index went as high as 9, which signals a major geomagnetic storm.

Over the next few days, Friday through Sunday, the solar flux is forecast to be 115, 113 and 112, and the planetary A index for the same period is predicted at 20, 20 and 15. Unsettled to active conditions are predicted around October 15 and for October 18-23 as well. The solar flux is expected to rise after the weekend, to above 130, then drop down to 120 around October 12-14, then peak around 145 around October 20. Now that we are in the fall season, look for good HF propagation when the K and A index is low.

If you have access to the web, check NASA Space Science News at www.astronomynews.com and look for the September 29 article under Astrophysics titled Crusty Young Star Makes its Presence Felt. This

is about the big gamma ray flash which blasted the earth on August 27, which was widely reported this past week in the news media.

On that day the planetary A index was 112, and it was assumed at the time that this was caused by a proton flare from our sun about 4 days earlier. Now some scientists are wondering if perhaps the resulting disturbance on earth may have been enhanced by a wave of energy from a Magnetar, or super-magnetized star about 15,000 light years from earth. Paul Harden, NA5N of the National Radio Astronomy Observatory in New Mexico wants to hear from hams who may have been listening to medium wave or HF radio around 3:22 AM Pacific Daylight Time (1022 UTC) in the Western United States on August 27. He can be reached at pharden@nrao.edu.

Paul says that this is the first known event from outside our solar system that has affected the earth's environment. He also invites us to look at his institution's web page on this event at www.nrao.edu/pr/magnetar.html. He noted that if only the SOHO satellite had been working, meaningful measurements could have been made which could easily separate the effects of the solar flare and the magnetar gamma ray burst.

The October 1998 issue of the magazine Astronomy has a couple of items of interest to solar observers. Page 28 has a stunning picture from the NASA Transition Region and Coronal Explorer spacecraft showing loops of plasma from an active solar region on April 25. The same issue on page 60 has an article about forecasting solar storms titled Blowin' in the Solar Wind.

Sunspot Numbers for September 24 through 30 were 156, 118, 115, 87, 127, 86 and 59 with a mean of 106.9. 10.7 cm flux was 135.4, 122.1, 126.9, 135, 122.5, 115.9 and 121.5, with a mean of 125.6, and estimated planetary A indices were 28, 121, 14, 12, 6, 10, and 8, with a mean of 28.4.

jeannie,

I have a backup system in my base station where several radios operate off of
12 Vdc. Instead of buying a power supply I bought a car battery and connected
a small battery charger to it. The battery is about $40 average price. The one
I bought is the same kind used in my car, so if it dies in the middle of
winter, I have a ready backup for that too.

FCC RENEWS AMATEUR ENFORCEMENT EMPHASIS

Things may be changing for the better on the Amateur Radio enforcement
front. The FCC announced this week that all Amateur Radio-related
enforcement investigation, evaluation, and processing has been
transferred to the Compliance and Information Bureau. The change,
effective September 1 but not announced until more than three weeks
later, was made "by internal arrangement" between the CIB and the FCC's
Wireless Telecommunications Bureau. The Wireless Bureau handles amateur
licensing and, for the past several years, has coordinated enforcement
with the CIB.
```

The FCC said the main objective of the change was to "facilitate the Commission's pursuit of compliance," especially in the area of resolving interference complaints, a hot-button issue within the amateur community.

"Amateur enforcement should have gotten more direct attention over the last few years," conceded Riley Hollingsworth, K4ZDH, the CIB's legal advisor for enforcement. "A lot of people think the FCC doesn't care."

Hollingsworth will be the FCC's point man in handling the complaints. He says FCC Chairman William Kennard "wants greater respect with respect to enforcement" at the FCC. Putting enforcement in the CIB's hands should mean "a much faster, more effective response," he said.

ARRL General Counsel Chris Imlay, W3KD, says he's "cautiously optimistic" that the change will improve the dismal amateur enforcement situation. "Now, CIB doesn't have to just gather evidence and forward it to another bureau," Imlay said. "It can act on it when it is ready. That's a good situation compared to where we were."

The FCC's public notice said the CIB staff now handles Amateur Radio enforcement matters "from initiation to resolution." That includes complaints, amateur testing issues, warnings, monetary penalties, revocation hearings, and "in extreme cases" equipment seizure and prosecution through the Department of Justice.

The Wireless Bureau continues to handle Amateur Radio licensing, including new applications and renewals, as well as all Amateur Radio policy and rulemaking matters. The change is expected to have no impact on the Amateur Auxiliary. Hollingsworth said the change could, in fact, mean that the FCC will work more closely and more effectively with amateur volunteers in dealing with enforcement issues.

Under the new arrangement, all amateur enforcement questions and complaints should be directed to the Compliance and Information Bureau, Compliance Division, Attention: Amateur Complaints, 1919 M St, Mail Stop 1500E1, Washington, DC 20554.

The FCC also has instituted an "Amateur Enforcement Line" at 202-418-1184. The automated system prompts callers to leave a name, a number, and a brief message. The CIB will return the call within the next business day.

SPECTRUM PROTECTION BILL TREADING WATER AS CONGRESS TRIES TO ADJOURN

It appears certain that action in Congress on HR 3572--better known as the Amateur Radio Spectrum Protection Act of 1998--will be postponed at least until next year, when a new Congress will be in place. Even so, the ARRL and League members have continued to press for consideration of the measure during the current session. The bill--sponsored by Rep Michael Bilirakis of Florida--has garnered 74 cosponsors.

The projected early October adjournment date for the 105th Congress has become a moving target as the House attempted to juggle its efforts to

complete the major appropriations bills, wade through the charges and countercharges in the ongoing investigation of the President, and find time for some politicking before the November elections.

New additions to the list of cosponsors for HR 3572 include Representatives Neil Abercrombie of Hawaii, Carolyn Kilpatrick of Michigan, Carolyn McCarthy of New York, Sam Farr of California, Owen Pickett of Virginia, Charles Stenhold and Gene Green of Texas, and Rod Blagojevich of Illinois.

For a full review of the bill along with a sample letter to Congress, see "DC Currents," QST, June 1998.--Steve Mansfield, N1MZA

FCC'S NESS: ENSURE ADEQUATE SPECTRUM FOR AMATEURS

FCC Commissioner Susan Ness recently gave amateurs some cause for optimism. In remarks prepared for delivery September at the Personal Communications Industry Association of America's PCS '98 in Orlando, Florida, Ness promoted the notion that some spectrum should be kept off the auction block. The value to the public of certain spectrum uses "does not always translate into pure economic terms," Ness declared.

"For example, we need to ensure that adequate spectrum is available for public safety purposes, for unlicensed--that is, Part 15--uses, for the Amateur Service, and for experimental and scientific purposes," Ness said. "None of these needs would be met if auctions displaced judgment in the spectrum allocation process."

Addressing the topic "Blueprint for Spectrum Management," Ness said auctions work well but are not a substitute for the allocation process. The FCC, she said, must not back away from its fundamental duty to allocate "in accordance with the public interest."

The complete text of Commissioner Ness's remarks are available on the FCC Web site at http://www.fcc.gov/Speeches/Ness/spsn815.html.

GEORGES WEARS OUT HIS WELCOME; HAMS COOPERATE

After devastating several Caribbean ports of call and clobbering the Florida Keys in late September, Hurricane Georges had already worn out his welcome, but he wasn't yet out of steam. Georges spent a weekend regaining strength in the Gulf of Mexico then headed for shore. Heavy rains and high winds along the Gulf Coast, including the Florida Panhandle, Alabama, Louisiana, and Mississippi, presaged the storm's landfall early on September 28 near Biloxi, Mississippi.

The storm packed 105 MPH winds, but gusts of up to 176 MPH were reported at Keesler Air Force Base at Biloxi. Rain totals of 30 inches or more along the hurricane's track caused extensive Gulf Coast flooding. Tornadoes spawned by the storm struck shelters in Mississippi but no one was hurt. Concern for flooding prompted the evacuation of more than 1-million people from New Orleans and vicinity. However, the storm and its copious rainfall veered more to the east, sparing "The Big Easy."

The FCC declared a communications emergency in Mississippi, Louisiana, and Texas to clear frequencies on 40 and 75 meters for emergency and health-and-welfare traffic. Mississippi Section Manager Malcolm Keown, W5XX, said hams in Mississippi, Texas, and Louisiana cooperated in their storm response.

"Disasters don't stop at section lines," Keown said. "It's been a very good cooperative effort, so this has been a very good demonstration on how folks can get together and make it all work." He says hams also worked with the Mississippi Emergency Management Agency and the Red Cross. Keown says many Mississippi repeaters were linked for the first time as well, so hams throughout the region could participate in the emergency response on VHF and UHF.

Only last week, Keown said, hams in Mississippi held their Simulated Emergency Test that included a mock response to a storm similar to the one actually occurring this week.

Alabama Section Emergency Coordinator Joey Carter, AE4WP, reported that Mobile and Baldwin counties were the hardest hit. He said more than two dozen tornado warnings went up in Alabama on September 28. The Alabama Emergency Net on 3965 kHz has remained active. Continued flooding and power outages were reported this week in Alabama.

"We have had a lot of folks helping out on the Emergency Net, and that has been a blessing," Carter said. "We're getting good information back that we are able to send to the National Weather Service."

In Northern Florida, SEC Nils Millergren, WA4NDA, reported shelters opened in several counties. More than 3000 people in Escambia County alone took refuge. Escambia is the state's westernmost county. A VHF net was opened for West Panhandle District traffic. Flooding has closed some highways and bridges. ARES was reported available for emergency communication to the western panhandle counties.

The storm recovery and cleanup were gearing up by week's end along the Gulf Coast, even as some flooding continued to plague the region.

Storm cleanup and recovery also was under way in Puerto Rico, which suffered heavy damage and several deaths at the hands of Georges. Hams there have continued to help, especially in areas where conventional communication was knocked out. ARES member Victor Madera, KP4PQ, reports thousands still in shelters, but "FEMA and Red Cross are doing wonders!" Most amateur storm recovery activity in Puerto Rico has been on VHF, he said. "Power is back in about 50 percent of the island," he reported earlier this week. Central Puerto Rico was the worst-affected region because of the mountainous terrain. Power lines knocked out there have been difficult to reach to repair. Telephone service was spotty in some parts of the Commonwealth.

HURRICANE WATCH NET ENDS MARATHON STINT

When Hurricane Georges was downgraded to a tropical storm, the Hurricane Watch Net on 14.325 MHz was finally able to end its marathon operation.

"Our business is done," said Net Manager Jerry Herman, N3BDW, as he got word of the storm's new status September 28. "It went well."

The Hurricane Watch Net remained active for about 10 days straight, passing weather-related information via W4EHW at the National Hurricane Center in Miami as Georges moved from the Caribbean to the Gulf of Mexico.

The lengthy operation took a toll on net control operators, who became scarcer as the storm refused to quit. Herman said the net operated nearly around the clock, although 20-meter propagation was lost during nighttime hours. "It was a long haul for our operators," he said. "Every time I thought we were about ready to run out of operators, some more folks would just jump back in there and do it again."

Herman called Georges "a really unique storm that just kept going." Georges expended his final burst of energy during the last few days of September, dumping heavy rain along the Gulf Coast.

The Hurricane Watch Net formed in 1965 after Hurricane Bestsy. The Net's relationship with the National Hurricane Center dates back to 1970, during Hurricane Alan. Herman says the Net welcomes help from newcomers, but net "regulars" go through a regular training program. To find out more, contact Jerry Herman, N3BDW, e-mail jherman@smart.net. In the meantime, Herman says he's grateful there is not another storm on the horizon.

GAMMA RAY BURST BRIEFLY AFFECTS PROPAGATION

Insomniac hams in the Western US might have witnessed the effects of a startling cosmic event in the wee hours of August 27. And those hams' logbooks may hold information scientists want.

For five minutes, starting at 1022 UTC on August 27, HF propagation changed dramatically for the Western US and Pacific area. "It was as if night was briefly turned into day in the ionosphere," said Stanford professor Umran Inan, leader of a research group that observed the event. That means that your 40 or 80-meter DX QSO may have suddenly faded away, and, for a short time, you could have worked DX on 20 or 15 meters, or maybe even higher frequencies, in the middle of the night.

On HF, Inan said the MUF should have risen to daytime levels for about five minutes. Inan said he'd very much like to hear if any hams noticed the effect.

The cause was a tremendous burst of gamma-rays and X-rays coming from a newly-discovered star type some 15,000 light-years away. The burst of radiation from the distant star was powerful enough to boost the level of ionization in Earth's upper atmosphere from nighttime to daytime levels, according to the Stanford research group.

This was the first time that such a change in Earth's environment has been attributed to an event so far away. The star that emitted the burst

is a magnetar, a superdense neutron star with the most powerful magnetic field ever found in the universe, a magnetic field strong enough to rip atoms apart.

The gamma and X-ray burst "lit up" Earth's ionosphere. Along with the burst a cloud of subatomic particles spewed from the star's surface at nearly the speed of light. Those particles spiraled around the magnetic field lines and emitted microwaves.

At the National Science Foundation's Very Large Array (VLA) radio telescope in New Mexico, astronomer Dale Frail, working with Caltech researchers Shri Kulkarni and Josh Bloom, detected the microwaves emitted by this cloud of particles at frequencies ranging from 1.4 to 8.4 GHz, and made a "movie" of the cloud as its radio emission brightened, then faded away.

The radiation burst affected the ionosphere over the Western US, but the Eastern part of the country was in shadow, so hams in the East would not have experienced the strange propagation effects. For more information, see the National Radio Astronomy Observatory's Web site at http://www.nrao.edu/pr/magnetar.html.--Dave Finley, N1IRZ

SOLAR UPDATE

Propagation prophet Tad Cook, K7VVV, Seattle, Washington, reports: Solar activity was down a bit last week, with the average solar flux off by six points and average sunspot numbers lower by almost 27 points.

Now that September is over it's time to look at some long term trends. The last quarter of 1997 had an average solar flux of 94.3. The next quarter--January through March of 1998--the average flux rose to 98.8. The second quarter of this year the average flux was 107.8, and this last quarter the average flux was 129.2.

The average flux for September was 137.7, and for May through August it was 106.7, 108.5, 114.1 and 136. The average flux over this past week was 125.6, and for the same period one year ago it was only 88.2. We can see that the general trend in solar activity is up, although there was only a negligible increase from August to September.

Last week the really active geomagnetic day was on Friday, when the planetary A index was 121 and the planetary K index went as high as 9, which signals a major geomagnetic storm.

Over the next few days, Friday through Sunday, the solar flux is forecast to be 115, 113 and 112, and the planetary A index for the same period is predicted at 20, 20 and 15. Unsettled to active conditions are predicted around October 15 and for October 18-23 as well. The solar flux is expected to rise after the weekend, to above 130, then drop down to 120 around October 12-14, then peak around 145 around October 20. Now that we are in the fall season, look for good HF propagation when the K and A index is low.

The October 1998 issue of the magazine Astronomy has a couple of items of interest to solar observers. Page 28 has a stunning picture from the NASA Transition Region and Coronal Explorer spacecraft showing loops of plasma from an active solar region on April 25. The same issue on page 60 has an article about forecasting solar storms titled "Blowin' in the Solar Wind."

Sunspot numbers for September 24 through 30 were 156, 118, 115, 87, 127, 86, and 59, with a mean of 106.9. The 10.7- cm flux was 135.4, 122.1, 126.9, 135, 122.5, 115.9, and 121.5, with a mean of 125.6, and estimated planetary A indices were 28, 121, 14, 12, 6, 10, and 8, with a mean of 28.4.

PAUL KRUGH, N2NS, SK

Ohio State Government Liaison Paul Krugh, N2NS, of Reynoldsburg, Ohio, died unexpectedly. September 20. He was 58. In addition to serving as an assistant director in the Great Lakes Division, Krugh was a member of the ARRL Public Service Advisory Committee and a volunteer consulting engineer. He was an ARRL Life Member with 29 years of continuous membership. Krugh also volunteered for the Red Cross and was an ARES member. He retired from American Electric Power in 1996. Survivors include his wife, Judith, and two sons.

IN BRIEF:

* This weekend on the radio: The California QSO Party, the VK/ZL/Oceania Contest (SSB), and the RSGB 21/28 MHz Contest (SSB) are this weekend. Just ahead: The YLRL YL Anniversary Contest (CW) is October 7-9, the Ten-Ten Day Sprint is October 10, and the ARRL International EME Competition, the Rhode Island and Pennsylvania QSO Parties, and the VK/ZL/Oceania Contest (CW) all are October 10-11. See October QST, page 108, for details. A reminder: This is the "official" Simulated Emergency Test (SET) weekend, although ARES teams and nets may conduct their simulated emergency exercises any time between September 1 and November 30. The SET is aimed at simulating the circumstances you could face in an emergency or disaster situation. See August QST, page 104, for details.

* ECFS system reported down: The FCC's e-mail electronic comment filing system (ecfs@fcc.gov) to collect comments on petitions for rulemaking was reported down September 29. An FCC spokesman was not sure when the system would be up and running again.

* Vanity update: The FCC in Gettysburg reported September 30 that it had processed vanity receipts through September 10. This suggests it is taking approximately three weeks from the time an application is received until the day it is processed by the FCC. In the latest batch, the FCC granted 32 new call signs. Another 90 applications landed in the WIPs stack, however.

* Hams pass word on quake: Amateur Radio was the link to the outside world after an earth tremor hit Belgrade and central Serbia September

30. The quake, measuring 5.4 on the Richter Scale, caused minor damage. Amateur Radio reports said pajama-clad residents ran into the open clutching children, but seismologists advised within two hours that it was safe to go back inside. The tremor knocked out power in some parts of Belgrade. No one was reported hurt.

* SATERN Conference: All hams are welcome to attend the Salvation Army Metropolitan Emergency Disaster Services Conference, October 16-18, 1998, at Camp Wonderland, near Kenosha, Wisconsin. Presentation topics will cover the Grand Forks flooding of 1997 as well as the heat wave of 1995 and the 1998 Minnesota tornadoes. Several Amateur Radio-related workshop sessions also are scheduled. The conference fee is $50. For information and reservations, contact Della Bracey, The Salvation Army, 5040 N. Pulaski, Chicago, IL 60630; tel 773-205-3572. For conference details, visit http://www.getnet.com/~n6wa/satcon98.html.

* Mind your Ps and Qs and Cs: We recently discovered a change in the Canadian Postal Codes that could impact timely delivery. During the early 1980s, the Canadian Postal Service changed "PQ" (Province of Quebec) to "QC" (Quebec City) as a province code. Although they made the little-publicized change, they did not implement it since they were still manually sorting a majority of incoming mail. Mass automation now has come to Canada, and postal authorities there are enforcing the change. Canadian Postal Officials tell us that large mass mailings containing PQ rather than QC stand a chance of having the offending pieces returned to the sender undelivered. You might want to keep this in mind when mailing to Quebec.--thanks to Deb Jahnke

* Frontier goes under: New startup Frontier Engineering, which debuted at the 1998 Dayton Hamvention, has called it quits. The team included former Alpha/Power personnel Dave Wilson, G3SZA/AA0RS, and Brad Focken, K0HM. Wilson, who was Alpha/Power's former president and chief technical officer, has indicated he plans to re-enter the commercial sector next year. Frontier, based in Platteville, Colorado, marketed some amateur equipment as well as amateur repair service.

* Milestone announces new CW division: Milestone Technologies of Aurora, Colorado, has announced the creation of a new division, Morse Express, to focus on Morse telegraphy equipment and CW operating aids. The Morse Express lineup includes keys, paddles, and bugs from four manufacturers, plus electronic keyers and the Codemaster V Morse training system. For more information, contact Marshall Emm, N1FN, tel 303-752-3382; e-mail n1fn@morsex.com; http://www.MorseX.com.

* AOR sets up shop in US: Receiver-maker AOR has established a North American sales and support center in Torrance, California. Heading the AOR USA operation will be Takashi "Taka" Nakayama, KW6I, formerly with Alinco. Nakayama says the announcement marks an expansion of AOR's activities and said the Japan-based company is about to introduce some new products. These include the AR-8200B hand-held receiver, the AR-16 "pocket" unit, and the AR-7000 DSP Wide Range Receiver. For more information, visit http://www.aorusa.com; tel 310-787-8615.

* W3GEY new SpaceDev veep: SpaceDev, a commercial space exploration and development company, has named Jan King, W3GEY, as its vice president for space engineering. King has more than 30 years of experience in the small satellite and launch vehicle field. Most recently, he was a professor in the Department of Astronautics in the US Air Force Academy. King is an AMSAT cofounder and former Board member. SpaceDev hopes to launch the first privately financed spacecraft to land on another planetary body.--SpaceDev via AMSAT News Service

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit ARRLWeb at http://www.arrl.org.

The purpose of The ARRL Letter is to provide essential news of interest to active amateurs promptly and efficiently, and in advance of publication in our official journal, QST. The ARRL Letter strives to be fast, accurate, concise, and readable.

Material from The ARRL Letter may be reproduced in whole or in part in any form, including photoreproduction and electronic databases. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, ARRL members should visit the League's Members Only Web Site at http://www.arrl.org/members/ and follow the registration instructions. Registration also provides access to The ARRLWeb Extra, a news and feature magazine.

For members and nonmembers alike, The ARRL Letter also is available free of charge from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. NOTE: The ARRL Letter will be posted each Friday as soon as possible after publication.

* The Netcom listserver operated by volunteers from the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list". (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via the Netcom listserver.)

* The HIRAM BBS: 860-594-0306. The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the

message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published Fridays). For example, to request The ARRL Letter file for Friday, September 4, 1998, type "send ltr0904.txt". Then, on a separate line, type "quit". The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

70. Question for HTX-202 and HTA20 users

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-02 00:00:00 UTC
From: Chad <chad@xtdl.com>
Message-ID: <36150ebe.0@206.25.228.5>
Source record: 160805

Does anyone have stories on problems with the HTA-20 ? (Radio Shack VHF Amplifier - a mate for the HTX-202).

I'm on my third one - it fails very quickly; the store sends it for warranty repair and reports back "unrepairable", and gives me a new one.
Seems like a relay problem. Radio Shack has discontinued the unit and sold them off on clearance. My advice - DON'T BUY ONE, even at $29!

If you have insight or can help, drop me email at
chad@xtdl.com

Thanks

Folks,

I have a Butternut HF6V-X vertical and have been quite pleased with its operation on all non-WARC HF bands (It only does 80,40,30,20,15 and 10 and I don't have a rig which does 30). I noticed that one could really see the effect of improving the ground radial pattern by looking at the 80m VSWR 2.0 bandwidth. When I first installed the vertical, I didn't have any radials set up (this was a ground mounted system in damp soil next to a swimming pool). I originally had an 80m 2.0 VSWR bandwidth of about 125 khz. After adding 12 radial wires about 30' in length, I now have a 53 khz 80m 2.0 VSWR bandwidth. (Operationally this may be extended to over 150 khz with an antenna tuner, but not enough to get both 80m (cw) and 75m (phone) with the same antenna coil settings. I didn't have to change the little loading coil at the feedpoint of the antenna at all, but there are instructions for doing so in the kit. All in all, I like the antenna a great deal.

By the way,the original settings and measurements give for the assembly
of the HF6V-X were very close to perfect if you want to operate in the

phone sections of the low bands.

Folks,

The other problem is that the "isn't radio neat!" bug doesn't get placed in kids as much as it used to because just about everyone is bombarded with information about cell phones, PCS, GPS, FRS (a really bad thing for VHF/UHF ham radio) GMRS and a lot of other very radio-intensive everyday items (radio-controlled car locks and radio controlled toys for example). The urge to explore the wonders of radio is damped by the commonality of it. Would kids get much mileage out of "talk on a light-beam" science fair projects in the age of IR television remotes and laser pointers? I think not. I really hope that there is a "retro" appeal to HF at some point for the younger generation. Our own radio club (W2SZ) could really use some more members....

In spite of some of the things that have been said about the W32A by
myself and others on this netgroup, I still like the radio a lot. If
you are only going to use it at home, I would suggest looking into a 12v
power supply (such as those from RS). With proper antenna placement, I
haven't had any more problems with using gain antennas with the W32A.
The 5 watt power level is quite enough to get into repeaters all over my
area 30+ miles away with full quieting. The back of the HT does get hot
after transmitting on 2m for more than 30-45 sefonds at a time, but with

a speaker/mike this it not an issue. The problem is much, much less at the 0.5 watt level. Most of the time, this is enough power. It seems as if the heating problem is smaller on 440-450Mhz for some reason.

Your post elicited mixed emotions. I'm glad to hear that you got into
the hobby, and I think that it's great that there are other teen-aged
HAMS around in your area. I'm very sorry that you had such a bad
experience with 20m -- but you shouldn't judge a whole group of people
by the actions of a few. The 75m crowd seems to have a specific flavor,
but there are a lot of other bands with different characteristics and
operating practices. Don't give up on HF -- it's really a blast when
you get into it!

Sorry my experience with RT Systems and my local Amateur Radio dealer are 180 degrees opposite yours. I bought my ADMS-1 software about a year ago for my FT-50RD...when I acquired my VX-1R a couple months ago, all I needed to do was obtain a free upgrade from RT Systems' Web site. It installed flawlessly.

I didn't expect any "breaks" on anything ... I obtained what I wanted ... and have had no problems communicating with RT Systems.

You have used the word "hi" or "HI HI" in an inappropiate way.
HI HI is properly uses on CW (code) to indicate something funny. In text
you can say "ha ha" and of course on voice you would sound like an idiot
if you say "HI HI."

Your punishment is to say 5 lines of HI HI, text follows:

HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI

The power cable that should have come with the radio should have a
power cable. If it is missing the cable you will have to buy a new
one, am not sure what Yaesu uses, it could be that you are stuck with
their replacement.

Typically, power supplies have 'binding posts' and all you need to do
is connect the red wire to positive and the black to negative and you
are set. Use of lugs on the cable is preferred, they make for a
cleaner and more secure connection.

If you need any further assistance, you may e-mail me with your
questions.

I have the week on October 12th off. I have been on HF for about 3 months now. Many people want a North Dakota contact. I am considering some Autumn camping and HF'ing and North Dakota is a possibility. How many people would like to make a N.D. contact on 10/17 or 10/18. If I get a good response, I will strongly consider changing my camping itinerary to North Dakota on those days.

Lloyd,

May I suggest before you continue to run off at the mouth with a bunch of
stumperjumper lies you actually check this out. I'll give you the benifit
of the doubt in that you have probably fallen for the "big lie".

If you care to really check this out, and avoid a libel charge, you will
find that Mr. Whiten sold amp's to licensed radio amateur's only, which is
legal. As for the jamming, may I suggest you ask why this is alleged?
Simple, folks like Al Abernathy, George Ashley, and assorted other rif raff
have made a career of jamming 3901. So in other words Lloyd, put your
brain in gear before engaging mouth.

87. Re: Selling ham radios for use by non hams

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-02 00:00:00 UTC
From: gdfthr768@aol.com
Message-ID: <19981002001821.00962.00004749@ng04.aol.com>
Source record: 160859

I don't want to "tick off" any liscensed amateur, but I do have a Kenwood TS850.
Maybe some in here will find it hard to believe, and I can't help them, but I ONLY use it as a general coverage receiver, and occasionally use it to talk on CB bands, that's all. I am into SSBing on CB freq's, so I do use it for that purpose from time to time, but I keep the power down to about 6 watts. I don't even transmit most of the time, I like to listen. Mostly I am a shortwave enthusiast.
It is a great radio, and while I know I can never use it on the ham bands, and DON'T, I can understand the gripes of those who do not want such radios in the hands of non-liscensed op's.
I would suggest that the problem lies not so much with laws and regulations, but with the op's themselves. I hear a lot of hams on that rig, and some of them should NOT have a liscense at all. The others are fun to listen to, and offer a lot of advice and knowledge I can't get just by talking on the CB or reading the trade mags. Listening to Extra Class op's discussing antenna techniques and upcoming events makes me excited about radio, whether I transmit or not.
I wish others felt the same way, and enjoyed HOW they use their gear, not WHAT their gear actually is...
Mike in MO.

88. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6v1m60$50l@news.Hawaii.Edu>
Source record: 160860
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Source record: 160863

I'm thinking about buying a W32A but I've been seeing quite a few gripes
here from owners. Here is my setup and perhaps some of you who have
practical experience with the unit can comment on possible problems.
I plan to use the radio on a MAHA dual band docking booster
connected to a copper J-Pole made of 1/2 copper tubing. It will be
connected with 75ft of Belden 9913F.
Things I'm concerned about are excess intermodulation and whether I
need be worried about excess heating during transmit. I appreciate any
constructive comments or advice.

I have a collection of computer boards
made to run on the S-100 bus standard popular
in the 1970's and 80's.
I would like to add to my collection. I wish
to buy S-100 boards.

I am especially trying to find the Cromemco
Dazzler, Computalker, and cards made by MITS.

I'm also looking for an Altair 680 or 680b
computer

If you have these items and are interested in
selling, please email me at <jukeboxjohny@juno.com>

Thanks,

Jukebox Johny

I use the ADMS-2D, not any version of ADMS-1, but this thread got me interested enough to take a more thorough look. If there is an upgrade for the early version of ADMS-1 to make it work with the VX-1R, it is not mentioned anywhere on the RT Systems web site.

My experience with RT Systems is "180 degrees opposite" itself. After buying a FT-8100R from RT Systems at a hamfest and then buying the ADMS-2D kit from another vendor (cheaper and faster!), I had to contact RT Systems for some tech support on using the software (my error - don't try to balance a laptop and radio late at night while squinting at the gray scale screen on the laptop and the blinking markings on the radio and expect to hit the right buttons). The tech support reply from RT Systems was prompt, accurate, and professional (Clint, you know me so let me just add that I reread and heavily edited my original message before sending it - I knew I was too frustrated and too mad to send out the first thing I typed.) On that count, RT Systems comes across looking pretty good.

On the other hand, I almost didn't buy the radio from them at all. While I was comparing the features/functions of the various dual-band mobiles available at our hamfest, I asked to see the instruction manual of one radio. The "gentleman" working their tables absolutely refused to consider the idea. He was distinctly rude about it. On the basis of his manner of treating customers, I had decided not to buy anything from RT Systems, ever.

Several hours later my wife convinced me to take another look at the RT Systems tables (they were the only major dealer at the hamfest this year). We spoke with a woman who was working the tables. She was polite, professional, and helpful -- and had no trouble opening a display box to let my wife see the radio and letting me scan through the instruction manual.

So, it would seem that RT Systems has its share of good people and (at least) one jerk.

Hello all.

Have a Kenwood TS-520SE that I just acquired. (Getting back into radio after a 20yr lapse.) Rig is execellent condition, but...There is no discernable difference in audio with the Noise Blanker (NB) on or off. The manual says to use the NB to reduce "pulse type noise". Trying it on 80m and 40m where QRM is running +10 and it has no apparent effect. Is this *normal*? What should I hear when the NB is active?

Thanks for the help!
Gil Bishop

Don't get a HAM license just to make personal calls. This is not what the
hobby was intented for. Get a cell phone or another long distance provider
that does not charge for network access. Yes there is a choice.

This could lead to a problem just like "911". Every call to "911" is an
emergency. What people don't understand is that having their cat caught up a
tree or no one picked up their trash today is not an emergency and they should
have not used "911". The same could happen to the police radio if anyone with
a radio capable of operating on the police frequencies starts using it to call
in what they think is an emergency.

The idea of having condo maintenance men install an antenna sort of
sounds like having a convenience-store clerk perform open-heart surgery.
What are the chances of them really doing a good job, anyway?

You can get the tuning close if you set the antenna up in a parking lot
with the counterpoise kit rolled out in approximately the position
it will be in. Some things to keep in mind -- especially on 40 and 80,
the Butternut verticals have a relatively narrow bandwidth, and these
are the frequencies that most need tweaking with the antenna in place.
Choose your section of the band, and cross your fingers.

In addition, you may need to prune the base loading coil for a decent
impedance match. This generally is dependent on the final positioning
of the whole shebang. Cross your fingers and hold your teeth just right.

And don't forget the 20 m transformer!! That's the 18-foot piece of 75 ohm
coax that seems to cause the most problems with these antennas, because
people think they don't need it. The obvious symptoms - good VSWR and
loading everywhere but 20, which shows between 5:1 and 8:1 no matter what.

You will get the best results if the final installation has the counterpoises
pulled out straight and perpendicular to the vertical (parallel to the ground)
and tied off, and held above the roof as far as possible. Like a (gasp)
CB ground plane antenna. Which is basically what a Butternut is.

And this will also allow you to get the best simulation on the ground.

N6OTQ
At least your friend can have an antenna...not all of us are so lucky.

103. Big meteor shower November 17-18th, work some meteor scatter DX on VHF

Newsgroup: rec.radio.amateur.misc

On November 17 and/or 18th, before dawn in the wee hours of the morning, the leonid meteor shower is expected to hit big time. And thus opportunity to do some long distance "DX" communications on VHF and UHF frequencies. These radio waves can bounce off of the ionized meteor trails in the sky. Could be thousands of meteors per hour at the peak. With this many meteors, one might be able to carry on long QSO's (radio conversations). One could monitor FM broadcast band stations of distant cities to listen for "openings". Or NOAA weather freqs.

And we can still do this even if clouds cover the sky.

Precisely why I think that throwing in the risk of losing your HT or fines balances the equation a bit. There are really no penalties for calling 911 on a stuck cat so it's "free" to some people. On the other hand, if you are willing to lose your HT, then it has a better chance of being a real emergency.

I think we agree.

> have had no problems communicating with RT Systems.

Well Clint since your are so adamant I called RT Systems. They deny that
there is any free upgrade from Version 1C to Version 1D. They once again
told me about the upgrade they sell for $20 consisting of an adapter and a
floppy with new software. Their number is 1-800-723-6922 if you want to check.

I think the problem might be you don't understand the difference between
a version change and a service patch. I have to presume that you had Version
1D from the get go and the service patch that they DO have on their web site
made it work properly. By insisting something is true that is not true you are
giving false hope of a free upgrade to people who are not going to get one.

If you want to continue this display of pigheadedness be my guest but I'm
going to take RT Systems word over yours because, well, I think they might
just know what the Hell they are talking about.

Lloyd,

Thank you for your interest in the other side of the coin. There is some truth to all of your statement's. However allow me to clarify what is going on. Before I do so, allow me to state, that I do not support blindly all that Rich does or has done. And the same goes for him to me. We are not involved in a dictorial relationship. We are just on the same side when it comes to the Stumpjumpers, Abernathy Radio Group and the B.A.R.F. That is in total oposition.

Several year's ago Rich left the 3894.5 group, mainly because of the activities of Al Abernathy, K4OKA, then KJ4JX, ex K4OKA. Al would and still does run up and down the band's and jam to his heart's content. Rich left the group. He went up to 3965 with Barry (AC4VO), myself and several other's. The intent was to avoid a confrontation. However this did not work, Al, Polly (W4FQF), Bill (W4LLI) and other's would come up there on a nightly basis and jam the hotel out of us. This also led to a problem with the Alabama net, who used that frequency. We decided to vacate 3965 and find another one to avoid the war being carried on to

the Alabama net.

Eventually we landed on 3.901. There escallated a war between the two groups. One night in fun we founded the "Goodfellows". Rich and several of our group, including ME, would go to 3894.5 and retaliate for their jamming of 3.901. After a period of time we all realized this was not productive, and not in the best interest of amateur radio. We elected to stop.

For the most part we did indeed stop. However some of our group and some of their group kept up the skirmishes. Including Rich and me. For the last year this has not been the case at all. And to my knowledge NO ONE that is involved in our group as a "Goodfellow" engages in this activity now at all.

FYI KF4JYZ is NOT in our group. Nor is Butch, WB5UZS, nor this fool calling himself "Captain Truth".

For the last 2 year's now W4FQF, W4LLI, WA4KBX, WA9KJB and others have engaged in organized
jamming of 3.901 at the behest of Al Abernathy, K4OKA. They were instructed to jam 3.901, and they have done so on a nightly basis.

As for the NAL. You could find all this in the freedom on information act. However here is the facts. Rich was "nailed" for malicious interference to KA4MUJ on 14.315. In the transcript it is obvious that MUJ acknowledged OTK into the QSO. At no time did OTK move off and follow Mike around. Thus no finding could be made. Rich's response ' ticked off the FCC and they increased the fine. Rich countered with demanding a hearing. The FCC did not provide him a hearing. At this point the whole matter mute, since the FCC did NOT pursue the matter.

All of this stupidy goes back to KV4FZ and his unwaranted attack on the organized traffic nets, in particular the INTERCON on 20m and previously on the Caribean nets on 40 meters.

This is the picture as I see it Lloyd. I hope you now have a better understanding about it. Neither side is completly innocent in this idiotic situation.

Unless you've already purchased the docking booster, I suggest you spend the money on a mobile radio. I've used my W32A with a homebrewed groundplane without adverse effects, but a j-pole should have gain, which in my experience, the W32A does not like on 2M. For the cost of the booster ($150 ??) you could pick up a used radio or even get a new 2M for $199 (Icom 2100H.) or a dualbander for $300.

Hi, Gil.

Your noise blanker _might_ be working, but not on the type of noise you're receiving. The noise blanker is supposed to work best on repetive, narrow noise pulses such as ignition noise from motor vehicles. It may or may not work so well on noise picked up by your antenna which is coming from a faulty AC power line. Also, it's very common to pick up QRM from harmonics of TV set horizontal oscillators in the 80m and even the 40m band. The noise blanker will not work on that type of QRM. You can check for this by shutting of any nearby TV sets.

Best regards,
Joe LeKostaj WB9GOJ
--near Chicago

Hi Gil (and others),

Like most noise blankers, the '520s is most noticably effective against impulse noise such as ignition noise when running mobile. I have a TS-520-S; its the same rig but without the capability of running mobile. Check the owners manual and you will find a tune up procedure for the noise blanker. Mine was OK when I bought it 20+ years ago but after touching up the tuning, it worked much better.

Hope this helps.

113. AirNav News: Pacific Radar View / Improved Online Registration

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-02 00:00:00 UTC
From: Andre Brandao <l42303@alfa.ist.utl.pt>
Message-ID: <Pine.OSF.3.96.981002170905.7234P-100000@alfa.ist.utl.pt>
Source record: 160885

Hello

In this email email you can find the following info:

o Improved Online Registration: receive your registration codes
within just 3 hours!

o US West Coast / Hawaii Aircraft Tracking Information

---

o Improved Online Registration: receive your registration codes
within just 3 hours!

Due to an upgrade in the registrations system, it's now possible
to receive your AirNav registration codes within just 3 hours after you
register it Online.
If you register now you can start using the program after you
download it.
This is because the program you may download has all the
capabilities of the registered version.
Just enter your Registration ID that will be sent to you after
registering and the 30 minutes limitation of this downloaded program will
be disabled.
To register now and receive your Registration Code within 3 hours
go to:

'http://www.fly.to/airnav' and follow the Online Registration
Link.

o US West Coast / Hawaii Aircraft Tracking Information

In the image you can find at:

'http://www.geocities.com/SiliconValley/Lakes/9420/shotex8.gif'

you can find a working example of AirNav
All the information included was made with real navigation at
real-time by an US AirNav user located in Houston, Texas, USA.
The attached .gif file shows a complete view of the Pacific
Airspace between Hawaii and US West Coast. It represents a typical
Saturday night, with strong signals from Oakland Center (mainly frequency
8843 KHz very active between 0200-0600 UTC).
The map file used to create the Screen Shot is available for
download at 'http://www.geocities.com/SiliconValley/Lakes/9420/usahaw.zip'
as well as more than 40 maps of many parts of the world.
AirNav makes possible, for the simple owner of a HF/VHF receiver,
to have a complete view at real-time of the skies of the globe. Most of

the Oceanic Control Centers do not have a visualization screen (since radars do not cover huge areas): using AirNav you will have an excellent view better than many of those centers!
Order now via a Secure Web Server (at 'http://www.fly.to/airnav' and following the Online Registration Link), download the program from one of more than 80 ftp's and receive the registration codes within just 3 hours.

Are you kidding? I stay a week behind just on this one. And please don't think I object to this sort of technical debate, because I am serious in wishing more crept in. I just hope others don't claim OFF TOPIC and wish to squelch it.

For example, I once set up a yagi TV ant facing point blank at Mt Wilson, Calif where the TV ant farm was located. I then connected a 300 ohm bal line direct to another yagi pointing 90deg away and 45deg down a Mt to transmitt a TV sig to our small Military Housing base in the Angeles Nat Forest. Strictly passive and it did increas the sig at the Television Rcvr, so then I put in a broad band amp and viola, first TV in the whole valley.. Caused much trouble but another story.

Question: How did the small amount of recvd sig cause enough radiation to reach 5 miles down hill to the Reciever?

>Mike why not study and get a HAM license and enjoy the hobby? Seems you
>would
>be good material for the hobby.
>

Actually, I have been "in the process" of doing just that for about two months now. I happen to have a rather large workday schedule and it prevents me from attaining confidence in the material in the time I WISH I could have it! :-) Thank you for your kind comment about being "good material" for Amateur Radio, it is appreciated. As I said earlier, I mostly enjoy listening, and that does not require a license as we all know. But the urge to start transmitting is rising, so I am just starting to prepare for testing. We'll see.... :-)
Peace-
Mike

FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 03 OCTOBER AND FORECAST FOR 04 OCTOBER - 06 OCTOBER
STATUS INDICATORS SOL:GREEN MAG:YELLOW ION: GREEN

1A. SOLAR SUMMARY
Activity 03 Oct: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number for 03 Oct: 112/63

GOES satellite data for 02 Oct
Daily Proton Fluence >1 MeV: 5.7E+07
Daily Proton Fluence >10 MeV: 8.1E+05
Daily Electron Fluence >2 MeV: 4.80E+07 (normal)
X-ray background: B2.5
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
04 Oct 05 Oct 06 Oct
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 04 Oct: 111/62
COMMENT: Solar wind speed currently at 500km/sec expected to
remain mildly elevated for today due to small coronal hole.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 03 Oct: Initially active, then quiet.

Estimated Indices 03 Oct : A K
Learmonth 11 4332 3211
Fredericksburg 17
Planetary 20

Observed Indices 02 Oct : A K
Fredericksburg 27
Planetary 21 4343 4444

2B. MAGNETIC FORECAST
Date Ap Conditions
04 Oct 15 Quiet to unsettled with isolated active periods
during local night hours.
05 Oct 8 Quiet to unsettled

06 Oct 7 Quiet to unsettled
COMMENT: Field was briefly at active levels, the declining to
quiet levels. Isolated active periods are expected for today
(due to a small coronal hole), then the field is expected to
become quiet.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
03 Oct Normal Fair Fair
PCA Event : No Proton/PCA Event In progress

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
04 Oct Normal Normal Fair
05 Oct Normal Normal Normal
06 Oct Normal Normal Normal
COMMENT: HF comms expected to improve over next three days. Some
degradation may be experienced during local night hours tonight.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
03 Oct 71

Observed Australian Regional MUFs:
Northern region MUFs near monthly values.
Southern region MUFs depressed by up to 20%.
Spread F observed southern region sites.

Predicted Monthly T index for October: 96

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
04 Oct 90 near predicted monthly values
05 Oct 90 near predicted monthly values
06 Oct 90 near predicted monthly values
COMMENT: Southern region MUFs depressed 20-30% during local day.
Depression followed geomagnetic activity on previous day. Northern
region MUFs were unaffected by the disturbance and remained near
monthly values.

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <694>
.....

>From the Editor's Desk:

Ben Green has asked us to delay his EMCOMM Bulletin series #150-153, 'Taking the Challenge' . We have renumbered the bulletins accordingly to reflect the change. Look for Ben's series soon.

Stay safe, everybody -- See you next week! Dave Larton, Editor
.....
Please Welcome:
Rick Maschek / KC6WZY <ricmaschek@aol.com> Hesperia, CA
Hi,

I am a public school science teacher but have been a volunteer/PCF/ EMT for San Bernardino County Fire since 1990 and also served on the county sheriff's Desert Rescue Squad (search and rescue team) for the past 8 years. I am also with the county's Office of Emergency Services as a citizen volunteer/emergency communications operator (RACES). Unfortunately, all the times I have been called out for emergency communications have been after I had already responded either with the fire or sheriff department so have not "officially" worked emergency communications other than for training exercises.

Rick
.....
Patricia E. Gibbons - WA6UBE <wa6ube@ix.netcom.com>
Mt. Hamilton, CA 95110

I am the Communications Repair Shop Supervisor
with City of San Jose's ITD/Comm Division. I have
a 21 year background in land-mobile radio communications,
starting as a communications technician with a /\/\otorola
MSS in 1977, working there for 3 years. Then 6 years as
a systems unit technician with County of Santa Clara
Communications from 1980-86 maintaining microwave,
dispatch consoles, voting systems, and base/repeater
stations.

I have now been with the City of San Jose
since March, 1987.

I am also the Engineering Officer with our City's
RACES program and heavily into HF voice and data
communications for emergency communications purposes.

Anyone is welcome to try a connect to our City's
Gtor mailbox. It is callsign = KF6IIY
set your radio's indicated freq to = 3624 KHz LSB
set mark tone = 1000 Hz
set space tone = 1170 Hz
set shift = modem

We will be upgrading our KAM (enhanced) unit
to a KAM+ shortly and then will be able to leave
the unit in "TOR STBY" mode. This will allow the
calling party to use Amtor, Pactor, or GTor and
our KAM+ will switch to the protocol that the
calling station is trying to connect with..

cheers

Trish

>From the Mailbag:

From: Khalil Ladjevardi <khalil@primenet.com>

Thank you very much for the ACS Newsletters..

I was wondering if there is a DOS/and/or/ WINDOWS software
for the over-the-air "EDIS" messages that is being transmitted
via 39.32 MHz. in the Los Angeles-area courtesy of the San
Diego RACES.

I am presently using PRO COMM / PCPLUS (DOS-version)
for the above. Problem is that saving messages must be done
manually.

Please advise of the availability of such software/freeware/
shareware..

Thank you,

Khalil Ladjevardi, K6FCC

(Anyone have some ideas? Please send them to larton@garlic.com
and we'll publish them in next week's Newsletter! -- ED)

Washington, Sept 20 -- The Federal Emergency Management Agency (FEMA) today intensified federal mobilization efforts as Hurricane Georges drew closer to a potential strike on Puerto Rico and the U.S. Virgin Islands.

In addition to regular briefings with the National Hurricane Center and FEMA advance teams and emergency management officials in the two threatened islands, the agency reported the following activities as part of the continuing federal response build up:

FEMA headquarters began 24-hour Emergency Support Team (EST) operations at 7 a.m. with the partial activation of staff to cover information coordination, public works and engineering, firefighting, mass care, resource support, health and medical services, urban search and rescue, and hazardous materials. Full-scale EST operations begin at 7 a.m. tomorrow.

Disaster medical teams from Kentucky, North Carolina and Massachusetts were placed on stand by and Urban Search and Rescue Task Forces from Florida and Virginia posted for deployment as required.

A liaison from the U.S. Transportation Command was deployed to the U.S. Virgin Islands to complete an airport assessment and a Mobile Air Transportable Telecommunications System put on alert.

Planning for a mobilization center in Roosevelt Roads, Puerto Rico was initiated and a mobilization team dispatched to staff the center.

Sufficient supplies of water, plastic sheeting, tarps, blankets, cots, tents and other emergency materials were identified for immediate

use at a storage facility in Puerto Rico, with back-up supplies and air transportable generators available from depots on the U.S. mainland. Stores of radios and battery supplies also were being identified.

This week's EMCOMM Bulletin:

EMC150 FIRE SERVICES FACE Y2K CHALLENGE 1/2
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio
By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC150 FIRE SERVICES FACE Y2K CHALLENGE 1/2 9/21/98

>From The FEMA Bulletin:

FIRE SERVICES FACE Y2K CHALLENGE

"The approach of the Year 2000 has captured attention and stirred imaginations worldwide. Much has been written about the impact of this date change on computer systems. There are currently many automated and intelligent computer systems not designed to account for the millennial date change of January 1, 2000. If not addressed, there is a legitimate concern that the Year 2000 Problem could consequently affect our nation's telecommunications systems.

"Michael K. Powell, Defense Commissioner for the Federal Communications Commission (FCC), recently discussed the problem in an article entitled "The Year 2000 Bug and Public Safety Communications." With his permission, this piece borrows heavily from his article to address related issues that could impact fire and emergency services.

"The Federal Emergency Management Agency's United States Fire Administration (USFA) and the FCC, are particularly concerned about the public safety communications networks and operational systems that fire departments and emergency service organizations rely upon to ensure prompt and continuous emergency services to the public. It is possible

that the Y 2000 Problem could affect electronic devices as diverse as security systems, communications and dispatch systems, 911 reporting systems, and the microcomputers that help run apparatus and climate control systems.

"Problems with any of these systems would have a negative impact on emergency services ability to respond," said USFA Administrator Carrye B. Brown. "The fire and emergency services community must make checking and correcting these vital systems a top priority for Year 2000 readiness."

"Many fire departments nationwide have already acted to fix Year 2000 Problems. Yet, there is concern that some departments are just now realizing the seriousness of the problem, and have not yet taken the necessary steps to prevent system disruptions. There will be no last minute miracle fix and the deadline cannot be negotiated. No one can afford to put off the inevitable any longer: America's public safety communications networks and operational systems must be made ready for the Year 2000.

This Yaesu NC-50 one hour dual slot battery charger is in mint condition with the original box and operating instructions. Included in this package are the optional Yaesu CA-14 and CA-10 charging adapters. These adapters will allow you to charge all of the available battery packs for the following Yaesu radios: FT-50, FT-10, FT-40, FT-51, FT-11, FT-41. The NC-50 will rapid charge your battery in one hour and then switch to trickle charge. It will then automatically charge the 2nd battery pack if you have one inserted in slot # 2. Price for the complete package is $75.00 plus shipping. E-mail address: jcsarp@aol.com

126. antenna mounts for luggage rack - help!

Unfortunately, the peak won't be visible from the US. The radiant of
the Leonids is out of the constellation Leo, of course, and that won't
be above the horizon for US amateurs during the peak of the shower.
This is supposed to be a 33 year peak, and counts as high as 100,000
meteors an hour have been predicted, but we're going to miss the
show.

Since the peak will be below our horizon, we can't take advantage
of it for meteor scatter contacts either. Sorry. Maybe in 2021.

Source record: 160821

Well, I'm 15 and I'm a no-code TECH. I got licensed when I was 13. I definatly see why teens don't want to get a radio license because of all the other things they could get in to, the Internet, you could use a phone (that's a "land-line" for those of you that are that old,) and so many other things. Why did *I* get licensed? Mainly because of boredom. I had nothing to do most of that summer, and since I was already into scanners and such I figured..... "What the hell.... I'll take the damn test and see if I pass..." I never even spent the $20 for the study book. I downloaded all the questions off the ARRL Web Site. Unfortunatly, no one was there to guide me and no one told me I needed to study the Novice question pool as well as the Tech pool. But I passed anyway. Am I glad I got it? Definatly! I have lots of radios and antennas now, and it's alot of fun. I talk to other teens around the area (yeah, in the Philly area there are actually a few active teen hams.) I tried CW, but I don't really get it. About all I could send and receive is my call and maybe CQ DX, CQ DX. Will I upgrade to HF? Probably not very soon. Why? Simple Answer: I own a Grundig YB-400 which tunes 75 Meters. (I've heard the stuff on there.) Even so, once a local machine had a 2 meter to 20 meter HF link and me and another teen got on there. It wasn't 10 minutes when some ass-hole came back to us and said "What the f**k are you kiddies doing on 20 meters?" Needless to say, the day previous will be my last CW learning session for quite a while. Why should I work so hard just to listen to these moron oath idiots talk BS to me?? I think you get the idea.

132. Help: Removing HF Noise in Toyota Pick Up...

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-03 00:00:00 UTC
From: Bart Hackemack <hackembl@ix.netcom.com>
Message-ID: <3615D1AD.B7A6E5@ix.netcom.com>
Source record: 160822
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I am looking for some information regarding suppressing what appears to
be
ignition noise in my 1992 Toyota Pick Up. I am running an IC706-MKII in
the PU.
I can only work signals approximately S9 or higher while driving, on all
bands.

Noise: When the PU is at rest, the 706 does not "hear" noise with the
noise blanker on,
even when the motor is rev'ed to rather high RPM's. However, when
driving, the 706
hears what appears to be ignition noise. I've tried disconnecting the
coax (thinking that the
noise may be entering the rig via the power cable but disconnecting the
coax removes the
noise.

Work Done: I have grounded nearly everything and anything that I can
find.
Body parts to Frame, Tailpipe (3 places) to frame, bumpers to frame,
motor to frame
(4 places), gas tank to frame (2 places), hood to body, etc. I have
placed torroids on
the power cables, bypass capacitor on the primary coil wire, tried
grounding and removing
the ground from the rig. I have replaced the motor to firewall ground.
All connections have
been made by using a hobby drill to remove paint. I have also checked
for grounds existing
from the manufacturer, I have "improved" the ground of these by removing
paint under the
connection. Oh, yea, I have replaced the Wires with a good set (well
they are supposed
to be anyways) of suppressed spark plug wires, new resistor plugs, new
distributer cap and
rotor. I have removed the drive belt to the alternator to see if the
noise is really alternator
noise, it isn't.

Results: This work has netted my virtually nothing! This work seems to
have removed
very little noise when the PU is in motion.

Other strangeness: I have done some snooping around with a shortwave radio and a
coil of wire for an antenna. I have noticed that the body appears to be radiating
what appears to be ignition noise.

Question: Does anyone have any experience elliniating noise with a Toyota Pick Up?
Any help with this would be greatly appreciated.

Bart,

Have you tried grounding "dangles" which used to be on older cars to periodically discharge any static charge on the body of the car? I haven't seen any of these for years, but it seems as if you only have this problem when the car is in motion. Is this assumption true?

As a long-time meteor jockey (first QSO July '74) I can say that the
predicted "peaks" are often (always?) wrong.

These predictions are "precise" measurements of almost random events.
We have a cloud of debris in orbit around the sun and because 33 years
ago, and 33 years before that, we had big showers doesn't mean that an
exact day and time for recurrence is predictable.

Persieds used to have a *peak*, then it had two, now it has three and
every time I've set schedules for the "optimum" time, it happened
yesterday or tomorrow. This is another example of the danger of
computer programs. Somebody's program predicts the optimum and by
god, that's when you have to make your schedule.

I can't wait until some program predicts an *optimum* frequency too.
"Joe Blow's program says 144.12345 is the optimum for the Flakids
shower, so I'm making all my skeds there." And so is everybody else.

Bah. And what has this to do with antennas anyway?

Source record: 160831

I'm thinking of buying one these dual band antennas used for $60. Any opinions on it? How good is the gain, reception, and everything else on the antenna? I'm going to mount it in my attic to replace my RS Wide-Band Discone (which I use for 440 MHz) and my 10 foot homemade 2m J-Pole. My 440 MHz range is simply *AWFULL*. On 5 watts and my discone, I get about 1.6 miles range in a moderatly hilly area, but on VHF it's alot better. Basicly, I'm looking for any thoughts and opinions on it. Also, how well does it receive out of band around 150-170 and 450-510 MHz? Does the gain immediatly drop when you exit the ham bands? Any opinions on the AR-270B are very much appriciated. Please post it here *AS WELL* as email me (yep..... AOL.....) Thanks alot!

Howdy from rainy Switzerland

Many thanks to all who kindly sent me reports on last weeks
tranmissions.
Looks like 3985Khz and 7120Khz are coming in very well all over Europe.
Wonder if any listeners can pick up our signal in the USA?!

SCHEDULE SCHEDULE SCHEDULE

This weekend you can hear the following stations:

RADIO WAVES INTERNATIONAL
It's always a pleasure to hear what's going on in the country
scene.Plenty
of chat and music keeps this station at the top of my list.

SWING WAVE RADIO
A brand new station!! Radio Wonderful from Germany and Radio Mystero
Ghost Planet
from Italy have teamed up together to bring a very interesting
show.Jasmine,The
Ghost and DJ Chris are all in full swing!

JOKES JOKES JOKES JOKES JOKES

This is a classic:

Two dwarfs decide to treat themselves to a vacation in Las Vegas.
At the hotel bar, they're dazzled by two women, and wind up
taking them to their separate rooms.

The first dwarf is disappointed, however, as he's unable to reach a
certain physical state that would enable him to join with his date.
His depression is enhanced by the fact that, from the next room he
hears cries of, "ONE, TWO, THREE...HUH!" all night long.

In the morning, the second dwarf asks the first, "How did it go?"
The first whispered back, "It was so embarrassing. I simply
couldn't get it up, if you know what I mean."

The second dwarf shook his head. "You think that's
embarrassing?" he asked. "I couldn't even jump up on the bed!"

And here's one from Alex in Germany:

Ein Mann kommt kurz vor 17 Uhr mit einem Messer im Bauch zum Arzt. Er
stï¿½hnt
merhmals: "Herr Doktor helfen Sie mir!" Der Arzt sagt, er hï¿½tte gleich
Feierabend.
Der Mann sagt erneut: "Herr Doktor helfen Sie mir!" Der Arzt ï¿½berlegt,
dann
zieht er das Messer aus dem bauch und sticht es dem Mann ins Auge. Dann
sagt
er: "Gehen Sie zum Augenarzt, der hat bis 18 Uhr geï¿½ffnet".

Keep the jokes coming people...

CHAT CHAT CHAT CHAT

Feel like a good chat with station DJ's and DX'ers? Then try out this
excellent chat room in the USA. Free Radio Network are behind this one.
Nice one guys!

http://www.frn.net/scripts/john/chat/chat.pl?logon

LISTEN TO THE WORLD VIA THE NET

This has to be one of the best sites around for listening to radio
stations
from all over the world.Just click on a country flag and hey presto!

http://www.comfm.fr/sites/tvdirect/index.html

That's all from me until next week.Enjoy life and keep on living.

In America, Barry, there are still a few wild and wooly things we can do legally, like owning transmitters, or publishing subversive information.

> I think you will find that your unlicensed transmitter can be seized.

Not in America, at least not for mere possession. Why would you think so?

> I remember reading about someone losing their transmitting equipment
> but I couldn't find any referance on the FCC web page.

Get back to us when you can substantiate your recollection. (Most likely it was someone who was being charged with an offense by the FCC, and the seizure of equipment was incidental to that).

Hello Drew. I was just worried about you, buddy. By the way, Ryan is
my middle name, hence the R. I haven't been in here in months but I
may come in from time to time. Take care my friend.

146. R71a Battery Replacement

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-03 00:00:00 UTC
From: AMDX <AMDX@worldnet.att.net>
Message-ID: <01bdef12$c4c2ea40$1d4b460c@default>
Source record: 160836

I'm ready to replace the memory battery in my R71a.
It looks like the Ram unit unplugs from a 12 pin and
an 8 pin connector. My understanding is that I must
keep the memory powered to save it.

Do I remove the Ram unit, then apply 5v to the proper
points and proceed to replace the battery?

I have a noise from the display, I think, changing the
display brightness affects the noise. (A whine that
starts low and rises in frequency, then another starts
and this cycle continues).
Any thoughts about correcting this.

Also any common caps that should be replaced
before they cause problems?

Thanks
Mike

Source record: 160838

It gives people a sense of power knowing that if they want or need to,
can transmit on frequencies reserved for the police force. Another
possible reason is that some individuals are trouble makers, they get a
sense of power knowing that they can interfere in police matters and
disrupt normal communications.

I work as a police officer in a small town. I am on call some friday's through sunday. I opened up a FT 50 so I could monitor our local VHF police freq's and our local ambulance that takes calls on UHF. This way, I don't have to carry two radio's. It is also the only way that I can talk to our ambulance when they are responding to the rig. I also use it to talk direct to a towing company to expidite calls. I Know that the radio is not type accepted to use on some of the bands that I am using it on, but it is for emergencies only not just Idle chit chat. I am also a ham and I can monitor my ham repeaters on it.

Folks,
I'm posting the following question for someone... I have an interest in this issue as well. Any words on the subject would be greatly appreciated.

For my part, I have noticed a problem with my HT getting noise pulses in the receive. But that's different from what's being described below. But I'd be interested in any info/ experience on depth finder/ VHF interference

Bill
n2asa

Posted in rec.boats:

I have a Uniden MC795 VHF marine radio that works great....as long as my depth
finder is off. With it on I can receive ok but the transmission is broken to
coincide with the pulse of the depth finder. I have been told to isolate the
radio with a "filter" or capacitor, possibly wire direct to the battery instead
of through the auxially switch on the dash, wrap foil around the radios power
lead in and several other equally questionable solutions. Has anyone had any
experience with this problem before and if so.....how did you solve the problem?? Thanks.

It's very likely that I've missed something here.

According to my SkyGlobe program the constellation lLeo will be about 15 degrees above the horizion starting at about 1:30 am on Nov and it will "set" (read drop below 15 degrees) at about 12:30pm (EST). The same is true for Nov 18.

Must we be able to see the meteor trail to work a contact?

Even if the shower won't be at it's peak here in North America when leo is up, I wouldn't expect it to be a step function (ie 100,000 meteors/hr...click...0 meteors/hr).

As I understand how this meteor shower thing works: the movement of the Earth in it's orbit around the Sun will cause us to pass through a cloud of space junk. On Nov 17,18 we will be moving towards the constellation leo.

While I'm thinking about this I see that the constellation leo will be down for *about* 12 hours. It is this 12 hour period which I would expect to be the peak of the shower. Being as how it's the middle of the shower. With this bit of reasoning, I would expect our (North American's) best shot at the Leonids will be on the moring of the 18th.

As I look at the constellation of leo, it's only about 25 or 30 degrees wide. How wide will the cloud of junk be as we pass through it? Seems like it must be larger than the whole Earth (180 degrees plus) or we would hoover up all of the meteors the first time we passed through the cloud.

Let me just say that I've never worked even one meteor contact so I clame NO expertise on this subject. It just seems that the rational may be a little bit flawed. No insult intended here! If I'm wrong please tell me so, and why.

Thanks

>a club or school in the area that is giving instructions on getting a ham
>license.

Yes, there is the Kimberling City ARC, and the more local Tri-Lakes ARC, and I have been in touch with members of both groups. Also, there a quite a few of them who also like to get on SSB CB every so often and they help me out a lot then, too.
But I don't get on more than once a week for about two hours. I am out of the house by 9:30 am and not back until about 11:00 pm, do a lot of shows here in town. It kinda cuts into my reading time!! :-)
But I perservere yet! Thanks again for the comments and support!
Peace-
Mike

The 830s is a reasonably decent radio. It does not operate in AM mode,
meaning full carrier, double sideband. Out of date depends on how much you
want to spend..hi hi..It is not a synthisized rig and has no memories. It
uses a 12BY7 driver and 2ea 6146's for the driver stage and the output stage.
This of course means you have to actually "tune it up".

In my opinion, it would make a excellent rig to get on the air with.

Like you, I am actively involved in law enforcement. Our budget oftimes does not allow for a high dollar Motorola rig, especially for personal use in our POV's.(privately owned vehicles) I have taken the liberty to "open" the TX on one of my Ham rigs and I can now TX on the Freqs. I am allotted...I can now access the city AND county PD when necessary....at my own expense. Had I requested a personal use radio for this from our powers-that- be I would have been turned down simply because they do not have the monies in the budget. In a case of a personal injury accident or worse I feel that direct access to Dispatch is of the utmost import. We will worry about "type acceptance" later......by the way, I have used this rig to follow and help "capture" (in my off duty times) more than a dozen DUI's who could have killed or seriously injured many innocent civilians, and because I have this rig in my POV I have also been able to help the locals find purse snatchers, shooters and other various scumbags. It beats a cell phone hands down since I have direct access.

I think the one in the se is about the same as the ts-520. They have good noise blankers but need to be calibrated for best results. Also, if you have no noise, you will see no real difference. It's not until you get noise that it will come into play. Also you will see more of a difference when you have an actual signal that you are listening to in many cases. Also it will cause some distortion due to the reduced dynamic range when it is on and you have alot of noise. If you get noise and it doesn't seem to do much, realign the blanker. It's pretty easy if you have a manual. I recently bought a 830 and had to tweak the one in it. Now , works real good. And being variable, usually less distortion.

168. Strange tones while tuning. What are they?

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-04 00:00:00 UTC
From: Bob Sikes <rwsikes@mediaone.net>
Message-ID: <361754CD.4F7928EC@mediaone.net>
Source record: 160711

Okay, I'm new at this. This is probably a very dumb question, but I can't find an answer in any of my books, so I'll just make a fool of myself and ask.

When I'm tuning in SSB or CW mode, on any band, I often encounter pure tones that change as I move the frequency. They don't seem to be modulated at all. I have one now at 14.460, a fairly high pitch tone that drops in pitch as I advance until about 14.462 MHz when it becomes a low almost inaudible tone.

What are these? I don't think this is the same as a "whistler" since the frequency is constant. My first guess was an unmodulated carrier signal but then I can't understand why I encounter so many of these.

TIA

Bob Sikes KB1DHC (My brand new TechPlus Call Sign!)

Of course you realize that you can lose any and all FCC licenses
(including ham license) if you get caught violating FCC rules. Not
that I'm unsympathetic to the situation of working for a small-budget
police department, but it has to boil down to "how lucky do you feel?"

Hi,

I am a Radio Ham (Mi0BOT) who owns a property in Kissimmee, Florida which I rent out weekly or monthly. I'm planning to put up a limited aerial system (within the covenant restriction of the sub-division) so that I can stay in touch while I'm on holiday. It stuck me that there may be other Hams who would use such a facility. I know quite a lot of people come down from the Northern states to miss the worst of the winter weather, so the Hams among them may also be interested.

Details of the property can be found on my web site given in my sig.

Please email me if you, or somebody you know, would like more details.
Cheers

Reid.

They could be carriers, but they may also be "birdies" (spurious
responses in your receiver) ... take, for example the one you mention
at 14.160-14.462 ... disconnect your antenna and see if it disappears.
If it does, it's a real signal from somewhere outside ... if it's still there,
it's a birdie that's being generated *inside* your receiver.

Don't you think it's just a little immoral to spread
accusations about people without supporting evidence,
simply on the word or post of one individual?
What about people with kooks and bad guys
who've taken an unfortunate interest in them?
As you know from a recent thread, that concerns me
personally as I've become the target of
a couple of real loonies.

Human nature dictates that once you have accused someone
of something, that person is seen as "guilty" regardless
of facts. If I call you "thief" in public, then immediatly
apoligize and say I was wrong, you will still be suspected
as a thief in the eyes of the community forever.
That is the unfortunate nature of people.
In the majority of cases, the accuser is reacting
emotionally and irresponsibly to a misunderstanding.
There are actual crooks, but they are few thank God.

Accusations are very powerful. They should not be
spread about haphazardly in the guise of a "service."
If 3-4 people all tell the same story-- that's one thing.
Allowing anyone to post anything without backing it up
is immoral.

I will be happy to debate this point in a friendly manner
should anyone disagree. If someone cannot debate the point
and so wishes to engage in personal attacks,
please do so in private email.

>18.
>
>Must we be able to see the meteor trail to work a contact?

No. We can get meteor trail propagation just as well in daylight as at night.
The "light show" is only visible at night of course.

>Even if the shower won't be at it's peak here in North America when leo is up,
>I wouldn't expect it to be a step function (ie 100,000 meteors/hr...click...0
>meteors/hr).

True. But the shower is supposed to be sharply peaked. At least it was the
other recorded times we passed through the heavy clump.

>As I understand how this meteor shower thing works: the movement of the Earth
>in it's orbit around the Sun will cause us to pass through a cloud of space
>junk. On Nov 17,18 we will be moving towards the constellation leo.

It is sort of like a bullet hitting a bullet. The Leonid meteors are screaming along
in their orbit, and Earth is trotting along in its orbit. The two orbits intersect,
naturally, or we wouldn't have a shower. The debris cloud is not evenly distributed
about its orbit. Most years the Leonids don't put on much of a show. But there are
a number of "clumps". The largest clump is the one we'll intersect this year, and is
the same one we intersected in 1799, 1833,1866, and 1966. (Timing is everything.)

>While I'm thinking about this I see that the constellation leo will be down
>for *about* 12 hours. It is this 12 hour period which I would expect to be the
>peak of the shower. Being as how it's the middle of the shower. With this bit
>of reasoning, I would expect our (North American's) best shot at the Leonids
>will be on the moring of the 18th.

The prediction is that the peak will occur over the Far East Pacific. Of course
it will be well below our horizon at that time.

>As I look at the constellation of leo, it's only about 25 or 30 degrees wide.
>How wide will the cloud of junk be as we pass through it? Seems like it must
>be larger than the whole Earth (180 degrees plus) or we would hoover up all of
>the meteors the first time we passed through the cloud.

The figure I saw said that the cloud diameter is about 300,000 miles, which makes the time to pass through it about 5 hours. Peak is estimated to be near the middle of that period. By the time North America is on the leading side of the Earth, the shower should have come and gone.

As Wes noted, prediction is an inexact science because gravitational resonances, mainly with Jupiter, can alter the debris clump from one orbit to the next. But this is the best estimate available.

Greetings,

I am ready to add the information on my web page about the FTV-650 6 Meter transverter, but I have one question.

The PA tube in the transverter is a 2001. Is this tube available, and/or, what is a substitute?

Could I get a copy of the tube characteristics from someone with a tube manual.

Thanks in advance,

Al, NW2M

PS: And thanks for the inputs/copies of the 6JS6C tubes :-)

I agree. Those of us who sell and trade gear should already be aware
that it is a buyer beware market. If you buy or sell by mail, you are in
more or less gambling. That is the price for buying in that fashion. If
a sure, 100 percent, warranted purchase is what you want, buy NEW gear
from an authorized dealer. I too have been burned, but I entered the
agreement knowing good and well the risks involved.

there is always leeway with MS contacts and showers. predicted peaks are good for predictions. so, getting skeds is one way to insure "something". another way is simply listen on 6 or 2 meters, pointed at the radiant. i did that a few years ago, in seattle, during the perseids. heard pings for several hours, and a couple of 3 and 4 second bursts. i managed a partial contact, the other end died out as he replied with his grid square. darn...

better reslts are had with lower freqs. i've read (in older QST issues), during sunspot lows, that MS contacts can be had even on 20 meters.

Agreed. Just in the past couple of years, I have been burned by a GPS unit that won't work properly, a MT1000 that has serious problems, a PRO2004 that never arrived, and a couple of other items.

But, it just gets to the point where you say what the heck, and walk on.

My luck has been good on the 10-15 prepaid purchases I've made.
Of course, during my required telephone conversation with the seller,
I describe myself as a hermit and always end the call as follows:

Seller: I'll ship once I receive your money order.
Me: Sounds great ... remember one thing.
Seller: What's that?
Me: I AM the NRA.

The subject line was asking if anyone still loved the hobby, not for some idiot's smart-ass comments about how he still hates the hobby.
Ham radio is not dying, and I for one was in a discussion with a nice fellow who was giving me some pointers and his own opinions. We did not ask for your brand of lunacy to enter the ranks. If you don't like ham , stay out of rec. radio.amateur groups; I guess YOU can't read the newsgroup headers very well, can you?
>Oh, excuse me, Mr. Net God. The truth hurts, doesn't it?
>

Truth? What the hell are you talking about, truth? YOU happen to have all the answers?
NO, I do not take "truth" from rubes such as you. If you were to tell me that your shirt was blue, the chances of it being any color BUT blue would be awfully damn good, indeed.
In a battle of wits I do not fight with unarmed men. Go back to your toys, little man, and pick on someone your own size, namely, a 5 year old with dirty diapers.

Chuckle. Now, there is an idea!

I have been using that with my daughters suitors, but I guess
it might work over the phone!

You people sure are forgiving. Where I come from, if one is ripped
off or double crossed, and you know where the chump lives, you take
care of business mano-a-mano. If he happens to just have a fatal
"accident" or become an unfortunate statistic of 'random violence'..
oh well....happens everyday....

Hello John,

The TenTec Corsair 2, although no longer made, tops my list of rigs that fit your description.

100 W output, full QSK, easy to use, most of the necessary features. Still supported by the manufacturer. Really good filter options without spending a half kilobuck on filters. External VFO also made.

Only thing I don't like is the relatively fast (18 kHz/turn) tuning rate.

Just my opinion. Never owned one, but used one for many hours on FD and other times.

73 de Jim, N2EY

204. Ohio/Penn DX Bulletin #377

SB DX @ WW $OPDX.377
Ohio/Penn DX Bulletin No. 377

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 377
BID: $OPDX.377
October 5, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W2FXA, N2WB, WB2RAJ/WB2YQH & The 59(9) DXReport, N4GN, W4WX, N5FG, KJ9I, K8PYD, K8YSE, W0YG, F6AJA & LNDX, G4BUE & DX News Sheet, HB9HFN, HK8RPV, JA4AHV, LU1DZ, PA3GBQ, PA3CRA, SP9MAX, UA9LP, VE2NW, VK1ZL, YB5QZ and 9K2HN for the following DX information.

4S7, SRI LANKA. Mitsunori, JA4AHV, reports to us that he will be here October 20-30th, as 4S7AHG or 4S7/JA4AHV. Activity will be mainly CW on the low bands 160/80/40 meters. QSL to: M.N Sako, PO Box 59, Matsue 690-8691 Japan (or via bureau).

4S7, SRI LANKA. "The 59(9) DXReport" states to look for Ron, 4S7RO, to be active on 160 meters in October with an Inverted L antenna.

4U1UN, UNITED NATIONS HQ. A 4U1UN surprise appearance happen this past weekend on 12/15/20 meters. QSL via W6TER.

5J, BOCAGRANDE ISLAND (Colombia). A group of 12 Colombian hams will be active from here October 10-11th. They will have two HF stations on 20 and 40 meters using the callsign 5J8IB on SSB. No other details were given. QSL via HK3DDD.

5U, NIGER. The "DX News Sheet" reports that Dan, 5U7DG, is now active after his 5UDAN licence was revoked. He is using a long wire antenna until he gets a TH6 beam up. He does not like pile-ups. QSL via K4SE.

9G, GHANA. Steve, PA3GBQ, reports he will be here October 15-30th, for a job. He will be traveling all over the country, but if there are any possibilities, he will be active with the same call as before, 9G5BQ. Activity will be on SSB/CW with just a 100 watts and wire dipoles. QSL via PA3GBQ (CBA 1998 or bureau): Steve van Lieburg, Stresemannplaats 27, 3068 JL Rotterdam, The Netherlands.

9H0, MALTA. Just a quick reminder to look for the group of 24 Dutch operators that will be active from here from October 4-17th. Please refer to OPDX.375. Activity will be on all HF bands except 160 meters. Each operator will use their own 9H3 callsign, but a special club callsign 9H0VRZ will also be used.

DX NET REACTIVATED. It has been announced that Jim, VK9NS, will be reactivating the "Triple Two Net". For the time being it will be run on Saturdays and Sundays at 0530z on 14222 kHz as in the past. As conditions improve it is hoped that other net controllers are able to run this net on weekdays, but not on Mondays as this is the YL Triple Two Net. There is no word on the re-commencement of the HIDXA net which in the past was on Sundays at 0400z on the same frequency.

E31, ERITREA (UPDATE). The good news is Jacky, F2CW, was active this week and continues to be active as this bulletin was being prepared. The bad news is that the TS-50 he received has a broken VFO. It was reported, "he can't operate above 22 MHZ in SSB, and the power he is using now is 100w. And about CW, he can operate all bands but the power is from 10w to 50w only." KEEP LISTENING.....
NOW FOR THE DISTURBING NEWS! The members of the "Space A DX Group" to Eritrea was informed this week that each operator must pay $500 for his operating permit, and they could not operate as a group with one license. This will cost the DXpedition $10,000 ($500 X 20 operators). They will lose several of their operators if this is not changed. The group has requested assistance on this matter through the Eritrean Embassy in Washington. As you can see, this group is in real need of donations or cuts may take place. For more information, check their Web pages at: http://qsl.net/eritrea or http://pagus.it/E31DX
OPDX InterNet Subscribers will receive the complete press release by Bruce, WD4NGB.

FR5/G, GLORIOSO ISLAND (Update). Zareh, VE2NW, reports to OPDX that Jacques, FR5ZU, will be operating SSB only from Glorioso Island from October 6-30th. QSL via VE2NW. He also mentions that he will try to run Jacques about 0200z on 14256 for NA stations. Otherwise, Jacques will be operating solo.

FW, WALLIS AND FUTUNA. Cedric, HB9HFN, reports that since he had great fun and success last February with his DXpeditions to A3 and 5W (A35FN and 5W0FN) he is preparing to go to Wallis and Futuna next year. Activity will take place February 23rd through March 8th. He will be active once again especially for Europe, mostly on CW and on 80-10 meters. This will be a one man DXpedition unless someone with DX/contest experience is interested in going with him. Cedric has put up a WEB page where you can find more info (geography, schedules, material, logs, qsl, flight plan) about the DXpedition at: http://www.qsl.net/hb9hfn/pacific99.html

HO3, PANAMA. Louis, KG6UH/HP3XUG, reports he will use the callsign HO3A during the EME Contest weekends in October and December. It will also be used in the CQWW DX SSB Contest this month and for the ARRL 10 Meters Contest in December. Louis also likes to keep his ears glued to 6 meters during the TEP hours while at home (he also listens around 144.200 during

the TEP hours). On HF, he mostly listens around 24900 kHz during his local morning hours (1100-1500z) and in the evenings (2200-0300z). If there is not much activity, he listens mainly around 18080 kHz, or around 10104 or 7005 kHz later in the evenings or in early mornings. See QSL info below.

LU1, SOUTH SHETLAND. The station LU1ZI is located on the Argentine base Jubany on Mayo Island (King George Island, Lat 62 14 South, Long 58 38 West, Grid Locator GC07QS). There are two operators that are active mainly on SSB. The QSL information is: Direccion Nacional del Antartico, Cerrito 1248, Buenos Aires, Argentina.

OX, GREENLAND. Jorgen, OZ8AE, will once again be active from here, this time from November 11th to December 2nd, as OX/OZ8AE. Activity will be from Groennedal (southwest part of Greenland) while visiting Kim, OX3FV. He will be active on 160-10 meter CW and he will also be in the CQWW CW Contest as a Single Op/All Band entry. QSL via home call.

QSL INFO AND NEWS.......
Rick, NE8Z, informs OPDX that he is now the QSL Manager for HC1HC and HD1HC. All past, present and future QSOs can be confirmed via NE8Z.

New Address for KG6UH/HP3XUG. Louis, KG6UH/HP3XUG/HO3A, reports that with the closures coming over this next year of the U.S. Bases in Panama, he is required to open a new APO address which will be valid until late 1999. The current address, PSC 61 Box 324; FPO AA 34061 will cease to forward after February, 1999. The new address that is valid now: CAPT Louis N. Anciaux, USN(RET), HP3XUG/KG6UH, PSC 1 Box 57, APO AA 34001-0057. His local Panama address remains valid, although it is quite slow at times: CAPT Louis N. Anciaux, USN(RET), Apartado 417, David, Chiriqui, Rep de Panama.

Hamad, 9K2HN, reports that he has sent all the bureau cards received during the period from July 1st to October 1st (1998), for the following: 9K2HN, 9K2F, 9K5HN, 9K0A and 9K2HN/p. Direct cards are sent out week by week. If you are still waiting for QSL card that you have sent him before 1 September 1998, please let him know!! His E-mail address is: 9k2hn@moc.kw

Leo, K8PYD, reports that all VR2/K8PYD, XX9TYD and XX9YD are QSLed to K8PYD. He also mentions VR2/WB8YJF does not exist (...yet). XX9TJF QSLs go to WB8YJF. Leo states he wished he could have stayed longer in the Far East. He also mentions that he and WB8YJF made approx 925 QSOs during the RTTY contest, using XX9TYD. XX9TYD made approx 700 QSOs outside of contest and XX9TJF made approx 1000 QSOs outside contest.

RTTY ON ZONE 17. Serge, UA9LP, reports to OPDX that he is on every day operating RTTY on 80-10 meters. Ther were no times on bands reported. He does provide an E-amil address of: ua9lp@yahoo.com. QSL ONLY DIRECT to: Box 698, Tyumen 625000, Russia (No CBA 93-98).

SN20, POLAND (Special Event). Look for special event station SN20JP to be active from Cracow to celebrate the 20th anniversary of Pope John Paul`s II pontyficate. The station will be active 160-6 meters on all mode from October 1-31st. QSL via SP9PKZ.

T8, PALAU. Operators Dave/KJ9I, Rudolph/NF9V and John/NZ9Z will be active from December 8-17th, as T88II. Activity will be 160-10 meters with a emphasis on the topband. QSL via KJ9I (Contributions appreciated): David Schmocker, N7298 County Trunk Highway F, Oconomowoc, WI 53066-9040 USA (E-mail address: DSchmock@Cellular1to1.com)

VK9C/VK9X, COCOS-KEELING AND CHRISTMAS ISLAND. Charlie, W0YG, wants to remind everyone that he and George/W8UVZ will operate from Christmas and Cocos Islands from February 6, 1999, until February 20, 1999, spending a week at each location. Emphasis will be primarily on the low bands, WARC bands and RTTY. Some 6 meters activity will be attempted. However, the purpose of the DXpedition will be to give as many of the deserving low band contacts as possible. A Battle Creek Special and beverages will be used for 160/80M. Callsigns have been applied for and will be announced as soon as they are issued. Every effort will be made to be on top band each day for both sunset and sunrise openings into the States. Please QRX on schedule requests as Charlie is sure that if there is an opening and the tropical QRN subsides, they will work you.
SPECIAL ADDITIONAL INFORMATION. Charlie reports to OPDX about his Z2 and A2 operation. He states, "I worked a bunch from Z2 but never got the chance to operate on 80/160M as a DX mobile signal on those bands is equivalent to a dummy load. But an unforeseen bout in the bush with 'malaria' cut short my operation from Z2 and stopped me from further operating from A2 when I went there..... Sorry but I just couldn't do more. That malaria is bad stuff." Charlie reports he will again try for a license on his next trip and states he will attempt to do a better job.

VP9, BERNUDA. Gene, W2FXA, will be operating as W2FXA/VP9 in the Devonshire Parish, from October 25th to November 2nd. Activity will be on all bands 80 thru 10 meters including the WARC bands CW and SSB. QSL to home call.

VP9, BERMUDA (Rare Parishes). Igor, US1IDX, will be active from here as US1IDX/VP9 from October 17-24th. He will be staying at The Palmetto Bay Hotel located in the Smith`s parish. Igor will be active on the usual DX frequencies. He will operate as US1IDX/VP9/m and try to operate the VERY RARE Bermuda Parishes for those working on "The Bermuda Award". The award is issued to those who work ALL 9 parishes (districts) of Bermuda. He will arrive at Bermuda International Airport on the 17th at 1935z, and after finishing passport control (abt 15-20 min. later) he hopes to be active as US1IDX/VP9/m from the rarest parishes, St. Georges and Hamilton on his way to Palmetto Bay Hotel. Please watch during this time on 14195 kHz. Also, during the CQWW SSB Contest, Igor will very likely be active using his contest callsign US1I/VP9. While on Bermuda, Igor will be attending an annual dinner banquet as the World Wide winner of the 40th Anniversary Bermuda Contest (winner for the second year in a row). All QSLs go via N5FG: Floyd Gerald, 17 Green Hollow Road, Wiggins, MS 39577, USA (SASE please).

WP2, ST. CROIX (Update). Between October 19-27th, members of the Florida DXPedition Group (FDXPG), Bill/W4WX, Clarence/W4CJK, William/N2WB, Chris/ VE3FU, Jim/AA9TK and Ernie/W5OXA will be Multi/Single entry in the CQWW SSB Contest from St. Croix. They will also be active on all bands and modes, including RTTY, SAT and 6 meters, before and after the contest. WP2Z will be used during the contest. QSL via home callsigns and WP2Z via KU9C.

XX9, MACAO. From a press release by Tim, N4GN, both OH2PM (XX9TR) and OH2BH (XX9TZ) have been active this past weekend from Macao as they prepare their station for the upcoming contest season. Also mentioned was a message from Martti, OH2BH, stating "that the recent BT2HC and UE0LEZ special event stations were a tremendous success. They received quite a bit of local coverage in both the television and print media with ham radio being portrayed in a positive light. BT2HC alone made more than 4200 QSOs. Let's hope this enthusiasm for ham radio spreads into other areas of the region!"

YE5, GALANG ISLAND. Operators YB5QZ and YB5PD will be on IOTA OC-075 to celebrate the 27th Anniversary of Batam Industrial Development Authority. Galang Island is an ex-rufugee camp of Vietnam in 1979-1996. Activity will take place October 23-25th using the callsign YE5B. This station will also participate in the CQWW SSB Contest. Outside the contest there will be an emphasis on the WARC bands. They will be using CW, SSB and RTTY on 15/20 meters. QSLs for YE5B go via: Erizal M. Isa. YC5TML, P.O.Box 154, BATAM Island 29400, Indonesia. For information about Batam Industrial Development Authority and Galang Island look at: http://www.batam.go.id

ZF, CAYMAN ISLANDS. Bruce, N6NT, will be here while building a new house, October 11th through April. Look for him to be active as ZF2NT. QSL via N2AU.

ZONE 2. Look for VO1MP and VO1MX to be operating from Point Amour Lighthouse, Labrador, to activate Zone 2 as VO2CQ during the CQWW SSB Contest. Before and after the contest (between October 21-25th), look for them as VO2ZZ. Their activity at this time will be mainly on CW 160/12/17 meters. QSL via VE3FU.

Consider the time when you want to put a tower up ....PRB 1 laws are being prempted by State Building Codes.......Check into it....Laws that are designed to regulate the commercial telecommunications industry......These codes are pretty stiff and in order to comply one has to install a tower meeting commercial standards.....Sure you can put a tower up.....but try it....

Thanks, I hadn't thought of that even though I did read a little about "birdies".
The only thing is that these aren't always there, which I assume birdies would be.
I just checks and nothing is happening at 14.160-14.462 right now. Maybe it's a
mix of birdies and other.

October 4, 1998

An IRS "agent" in a police uniform? A trip to the IRS web site over the weekend revealed an IRS "recruiter" in what appears to be a police uniform. That picture, and much, much more, at the growing W8MMQ web site.

http://www.qsl.net/w8mmq/

You will also find links to the new and much improved Radio Free Lansing web site, which contains great free radio news, information, and links.

Message-ID: <18570-361813B9-36@newsd-113.bryant.webtv.net>
Source record: 160756

Does anyone out there know of a dealer, such as one of the major ham radio dealers, that sells the President Lincoln or any of the other 10 Meter rigs that President makes. I thought that President was primarily a European company now, but my brother says he has seen the President 10 Meter rigs sold at truck stops, etc. I have checked their web page, but can't find a listing for a U.S. address. If anyone knows of a dealer or any other source I can contact to purchase a President Lincoln, please e-mail me and let me know. Also, short of a President Lincoln, I am looking for Uniden HR-2600 that are still in the box, i.e., have never been opened. I know that there are still some companies that carry them.

Sir:
To minimize confusion, this vintage equipment is commonly referred to as
MASTR Pro. Progress Line is correct, but in ham shorthand usually is used
for the all-tube type equipment built by GE from 1956 to 1963 more or less.
MASTR Pro (MASTR stood for Mobile And Station, TRansistorized) was
introduced in the early 60s and followed by Mastr II in the 70's, then Mastr
3 in the 90s. If you don't find anything available close to you up there,
let me know, although shipping from here may be exorbitant.

Hello,
It is as same as 6146B, you can substitute without any problem, if you have only plain 6146,6146A,6146W or 6293, they all will work fine.
Best luck.

Hi,
I,m looking for any information or links to documentation on the YAESU FT767GX CAT system.

I am currently learning C++ and Assembly language for the Intel processor and thought that attempting to control my dusty old radio by computer would be a great way to revive my interest in amateur radio.

So, if anyone knows of any sites with relevant info please let me know.

Thanks in advance

Mike

221. Call Sign screensavers - free demo

222. Ten electro commandments

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-05 00:00:00 UTC
From: k0hb@juno.COM
Message-ID: <19981005.104038.-74281.0.k0hb@juno.com>
Source record: 160642

TEN COMMANDMENTS FOR RADIO TECHNICIANS

1. Beware the lightning that lurketh in the undischarged capacitor, lest it cause thee to bounce upon thy buttocks in a most un-seamanlike manner.

2. Cause thou the switch that supplieth large quantities of juice to be opened and thusly tagged, that thy days in this earthly vale of tears may be long.

3. Prove to thyself that all curcuits that radiateth and upon which thou worketh are grounded and thusly tagged lest they lift thee to a radio frequency potential and causeth thee to make like a radiator too.

4. Tarry thou not amoungest those fools that engage in intentional shocks, for they are surely nonbelievers and are not long for this world.

5. Take care that thou useth the proper method when thou takest the measure of a high voltage circuit lest thou incinerate both thyself and thy meter, for verily, though thee hast no account number and can be easily surveyed; the test meter doth have one and, as a consequence, bringeth much woe unto the supply room.

6. Take care thou tampereth not with interlocks and safety devices, for this incurreth the wrath of the supervisor and bringeth the fury of the safety inspector upon thy head and shoulders.

7. Work thou not on energized equipment, for if thou so doest, will thy shipmates surely buy beers for thy widow and console her in other ways generally unacceptable to thee.

8. Service thou not equipment alone, for electrical cooking is a slothful process and thou might sizzle in thy own fat for hours upon a hot circuit before thy maker sees fit to end thy misery.

9. Trifle thou not with radioactive tubes and substances lest thou commence to glow in the dark like a lightning bug and thy wife have no further use for thee except thy wages.

10. Causeth thou to be tagged all modifications made by thee upon equipment, lest thy successor tear his hair and go slowly mad in his attempt to decide what manner of creature hath made a nest in the wiring of such equipment.

Hi Bart,

How does it vary as you drive? Does it relate to speed of the vehicle or to engine speed? If you shift to neutral while driving and let the engine idle does the noise go away or does it only reduce as the truck slows down?

If it only relates to the speed of the truck it could be tire generated static. That can be fixed.

I'm not unsympathic about underfunding either, but I find it repugnant
that police officers would knowingly and willfully violate the law. Those
charged with upholding the law should be above reproach in their own
respect for the law.

Since this is a transmit problem, it is almost certainly being caused by
modulation of the DC power supplied to the radio due to the common
wiring connection shared with the depth finder. This is known as a
ground loop (or perhaps in this case a hot loop, the effect is the same).
Wiring direct to the battery, both positive and negative (fuse both leads),
is a good fix for this sort of problem. A brute force line filter may do the
trick, but going direct to the battery is a surer fix.

For the problem of noise on *receive*, the cause could be the same,
or it could be due to radiated noise. The test is to remove the antenna.
If the noise persists (you may have to manually open the squelch to hear
it), it is due to modulation of the DC voltage. If it disappears, the problem
is radiated noise. The cure for the latter is always to suppress the noise
at the source. In this case, the most likely source of the noise is radiation
from unshielded wiring between the depth finder and the hull mounted
transducer. Replace this wiring with shielded wiring (coax will work),

and this problem should disappear.

(You can't filter this noise because the pulse risetime is needed for proper operation of the depth finder, you can only shield it to prevent it from being radiated.)

The graphic is a spoof of an old armed forces recruiting poster. The guy in the foreground is in a Marine Corps uniform, not a police uniform. Your WWW site sucks, by the way. Some 'patriot' who can't even recognize a USMC uniform!

Hans

Message-ID: <3619339D.A50700E@aol.com>
Source record: 160652

I have two remotely accessible digital cameras and related paraphernalia
for sale. They can be used to remotely access (via
telephone or perhaps radio) the digital camera, or as a
remote web cam. Perfect for checking in on the baby-sitter
(the telephone switch allows one to call in without
the local phones ringing). I am asking $600 for the bundle
but will consider offers on the pieces. Below is a list
of the stuff:

1) Two (2) SucureCam outfits that include: Camera, Lens, Power Adapter
Cable, Mounting ,Bracket, 28.8 modem, Phone Cable and Software,
1 extra 3.6mm lens. These go for $599 each (not including the modems).
I will consider an offer of $300 and through in the modem for free.

For product info got to the Marshall Electronics
web page:

http://www.mars-cam.com/frame/securcam/securcam.html

2) One (1) ComSwitch 7500 and power supply, (to route calls to phone or
either modem) - works great!

3) Two (2) Motorola 28.8 modem fax/lan adapters with power supplies

Some really fun 40 meter CW QRP transmitters
are available from DWM Communications. And
they are completely assembled! You can find
more info at:

http://www.glr.com/peanut

WA5PQL dedicated an entire web page on how he put
together a complete QRP station using the "Peanut
Whistle 2". You can see his comments and a link
to DWM Communications main index page by checking
out:

http://home.earthlink.net/~philatchison/qrp.htm

Happy QRP'ing!!

73, Bull

Sorry, officer, but you need to go to the city council and get funding for proper radios for those various bands. You stand to get your town (and yourself) in legal trouble with FCC.

From ARRL Headquarters
Newington CT October 5, 1998
To all radio amateurs

SB QST ARL ARLB083
ARLB083 FCC cancels voluntary communications emergency

At the request of Mississippi Section Manager Malcolm Keown, W5XX,
the FCC has cancelled the voluntary communications emergency
affecting 7285, 7290, 3873, and 3935 kHz. These frequencies have
been returned to normal amateur use.

The FCC requested that notification of clearance be transmitted on
each frequency.

The frequencies had been used during Hurricane Georges for the Gulf
Coast Emergency and the Gulf Coast Emergency Health and Welfare
nets.

Fine! Fine!!
To all of you losers who wrote, correcting me on the guy's uniform, I say ... that you did exactly what I wanted you to do.

This post was nothing more than a ploy to attract more visitors to the site, and it has worked, better than I expected. Of course the guy is wearing a Marine uniform, it said so right on the IRS web site!! The story was about Marine recruiter Sgt. Sam Fidelis. So, you can stop email me telling me how much you hate the site, how much you hate me, and how stupid I am ... it was a simple trap and you fell for it.

By the way, thanks for the many hits (that counter is really rising now).

Hard to say. That's the kind of thinking that doesn't translate well into
writing, because the reader has time to evaluate the argument without being
biased by the hot-button words. On the other hand, the poster used an
address whose domain resolves to 'localhost' (127.0.0.1) so that flames
would be redirected to the root account on the complainer's own system.

October 9, 1998
Target: rec.radio.amateur.misc, rec.radio.amateur.policy

Welcome to The RSCM Wire, for October 9, 1998! This newsletter is distributed each Friday by the Radio Society of Central Michigan. As members of the Society, you are free to distribute this newsletter to others, so long as credit is given in some way to the Society, or W8MMQ. Thank you.

For other amateur radio news, information, and links, be sure to visit our web site at http://www.qsl.net/rscm. This site is updated on a regular basis, and may contain some information that did not make it into this issue of The RSCM Wire.

In this issue: an FCC special report; the communications emergency has been cancelled; a massive meteor shower is coming; and much more!

SPECIAL REPORT: FCC PROMISES BETTER ENFORCEMENT
The Federal Communications Commission has promised all radio amateurs better enforcement of the amateur radio spectrum. This, after several major changes within the Commission took effect last month.

As we reported last week, the Commission has now changed its procedure for handling complaints regarding amateur radio. The Compliance and Information Bureau (CIB) will now handle all enforcement matters, relating to amateur radio. This includes handling the initial complaints, compiling information on the matter, and enforcing compliance with Commission rules and regulations.

Many amateurs feel that over the last few years the Commission has ignored the amateur radio service, or at least not given it the attention that it deserves. This has led to increased problems on the high frequency bands, including 80, 75, and 20 meters. The Commission hopes that this new move will help to solve some of these growing problems, and prevent new ones from forming.

FCC Chairman William Kennard has said that by placing all enforcement matters in the hands of the CIB, amateurs should see a quicker and more effective response to problems throughout our spectrum.

The CIB will take a firm stand against illegal activity on the amateur radio bands, such as malicious interference. In extreme cases, they will even call upon the Department of Justice, to aid in the seizure of equipment, from stations that have been caught repeatedly violating Commission rules and regulations.

Finally, the Commission has instituted an "enforcement" phone line, where amateurs may call and contact the CIB directly. After calling 212/418-1184, you will be prompted to leave your name, number, and a brief message explaining your call. The Commission is promising that your call will be returned within the next business day.

If anything, this latest move shows that the Commission is at least trying, something that they have failed to do in the past. During the past several years, the Commission's enforcement efforts have been a joke, but with this change, I am hoping to be able to change my view of the Commission on this matter. Time will tell.

The only concern that I have at this point is that the "harsher" stand against certain Commission violations may encroach upon other issues, such as freedom of speech, etc. At this time, however, the Commission seems to be focusing on the issue that concerns us all, willful and malicious interference of legitimate amateur radio stations.

We will have more information on this story when it becomes available, including any actions taken by the Commission, under this new policy.

COMMUNICATIONS EMERGENCY CANCELLED
The communications emergency that the FCC declared on September 27, has been cancelled.

The emergency had been declared as Hurricane Georges swept through the Gulf Coast, and nets were activiated throughout the area.

Areas affected by the emergency were Mississippi, Louisiana, and Texas, and several frequencies were designated as emergency frequencies, only to be used for the handling of emergency traffic.

MASSIVE METEOR SHOWER COMING
A spectacular meteor storm will ignite the heavens next month, possibly "sandblasting" satellites and threatening everyday services from cell phones to TV shows to data communications, according to Monday editions of the San Francisco Examiner.

The "Leonid" meteor shower is set to drench Earth on November 17 and 18 with up to 40 meteors per second, sometimes 50,000 per hour!

"NASA is taking [the shower] seriously," NASA spokesman Don Savage tells the paper. "We have been assessing what we need to do to ensure our satellites in Earth orbit are going to be operated in a safe manner during this meteor shower."

"This meteoroid storm will be the largest such threat ever experienced by our critical orbiting satellite constellations," William Ailor, director of the Center for Orbital Reentry Debris, told a House Science Committee in May.

Ailor: "Because of the very high speed of the particles -- they will be moving at speeds of over ... 155,000 mph -- the storm poses an even greater and somewhat unknown threat ... Fortunately, most of the particles ... are very small, smaller than the diameter of a human hair,

and won't survive passage through the Earth's atmosphere. Our satellites, however, are not protected by the atmosphere, so they will be 'sandblasted' by very small particles raveling more than 100 times faster than a bullet." (Taken from the Drudge Report, October 5, 1998)

SPECTRUM PROTECTION BILL ON HOLD
It would appear that the ARRL's Spectrum Protection Bill, H.R. 3572, will be put on hold, at least until next year. ARRL officials and members are pushing for the bill to be considered in the current Congressional session, however, as next year, a new Congress will be in place.

If spectrum is allocated away from the amateur radio service, the Spectrum Protection Bill calls for an equal amount of spectrum to be allocated to the service elsewhere. Amateurs all across the country are in favour of the bill, and have been contacting their representatives to support it. So far, it has attracted 74 cosponsors.

For additional information on the bill, visit http://www.arrl.org/govrelations/hr3572.html. This page will be updated as news of the bill is released.

JUST A REMINDER
For those who are interested in finding modification files for your radios, the W8MMQ Mod Archive is now back online! Over 1,000 files and growing, this archive includes mod files for all types of radios, including amateur transceivers, receivers, scanners, shortwave radios, and more!

Just go to ftp://qsl.net/pub/w8mmq/mods/. This archive will be updated often, so visit again soon if you can't find what you are looking for!

AMATEUR RADIO RESOURCE SITE
Each week, we feature a web site that offers useful information pertaining to the amateur radio hobby. We welcome any suggestions that you might have. Simply email the URL and site title to rscm@hotmail.com. Thanks!

This week, we feature the European Microwave News, which supports microwave radio across Europe. If you are interested in microwave experimentation and communications, then this web site is a must!

They have considerable information available at this site, for both the beginner and advanced microwave enthusiast.

Be sure to visit http://www.pacsat.demon.co.uk/main.htm. And tell them that you found out about their site through our newsletter!

UPCOMING AMATEUR RADIO CONTESTS
For complete contest information, visit the ARRL Contest Calendar, on the internet at http://www.arrl.org/contests.

Ten-Ten Day Sprint
The Ten-Ten Day Sprint, sponsored by Ten-Ten International, will run

from 0000- until 2400-Z on October 10. Work am, fm, ssb, cw and rtty, on 10 meters only! Work stations only once, regardless of the mode. For more information, contact donw0rtv@juno.com, or visit http://listserv.lehigh.edu/lists/tenten-l/rules.html.

The ARRL International EME Competition
The contest, sponsored by the American Radio Relay League, will be held on October 10 through October 11. For complete information on the contest, visit the ARRL's Contest Calendar at http://www.arrl.org/contests/.

Rhode Island QSO Party
The contest, sponsored by the CTRI Contest Group, runs from 0000-Z on October 10 through 2400-Z on October 11. Work stations once on each mode, per band. Complete information is available at http://www.99main.com/~ctri/.

AND ... IN CLOSING
Thank you for reading this issue of The RSCM Wire. We would appreciate any comments or questions that you may have for us. Please direct them to Dan/W8MMQ at rscm@hotmail.com. Thank you.

Information from the following news sources was used in the production of this newsletter: Amateur Radio Newsline, The ARRL Letter, and the Drudge Report.

For more information on the Radio Society of Central Michigan, be sure to visit our web site at http://www.qsl.net/rscm.

If you have any information that you would like to contribute to this newsletter, you may email Dan/W8MMQ at w8mmq@juno.com. We will review all information submitted to us, and consider it for use in the newsletter.

73 de,
Dan/W8MMQ
w8mmq@juno.com

Let me put it like this: I guess I'll have to be content to go through
life accepting the risk that my life may be lost because some law
officer chose to abide by the law.

And, yes, I hold our president to the standard of abiding by the law,
as well.

Looks to me like the old style USMC Marine Corps dress hat and
uniform from around 1940-50. The text looks like it was added
electronically using an artist program or similar.

The 2001 is the Japanese version of the 6146. A good replacement would be
a 6146B or the mil version, 8298A. Also the 6146W will also work.

Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc

I have started a business that produces low cost, precision-made PC boards for hams/electronic hobbyists using their Gerber/NC Drill files.

In addition to my print advertisements I would like to advertise in newsgroups to attract the most attention yet avoid conflicts with the intent/purpose of newsgroups such as this. I really don't want to get flamed for placing what could be perceived as crass advertisements in newsgroups. Are there "favorite" newsgroups that people in this forum would visit to learn about new companies and their services?

Thanks and 73s.

259. A.C. 510: SEEKING FELLOW ANTENNA EXPERIMENTERS

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-05 00:00:00 UTC
From: Rudi Wiedemann <wiedemann@home.com>
Message-ID: <QfYR1.2777$2l1.10223829@news.rdc1.sfba.home.com>
Source record: 160770
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

I live in Fremont, CA. and am looking for other hams interested in designing and building experimental HF antennas. It's always handy with a second person to setup and do tests. (the YL isn't into antennas, she thinks they're ugly, I think they're beautiful) It's also more fun to share ideas and play around with novel approaches.

My current project is a 3 element Yagi beam for 10m since the band is starting to open up nicely. I've designed and built a set of helically-wound elements on PVC tubing and installed them on a boom and mast. I've got an MFJ-259B antenna analyzer and a simple FSM.

So if you'd like to mess with HF antennas and want to build some cool rigs for the next Field Day, please email me.

Regards.....Rudi - KF6RLQ

I have a kenwood TS-830S and it seems that when I tune through the bands the knob will move but the frequency will not move right away. It does move after a few seconds and if you go really slow it doesn't seem to skip any of the band. I can live with it, but it's a real pain in the butt to tune something in a hurry. Is this a common problem? Does anyone know how to fix this?

A Brief Historical Overview

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis E. LeMay (K0GRL, W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1946-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the

tremendous influence that amateurs, including those within TAPR (Tucson Amateur Packet Radio), have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

What is an Elmer?

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship.

The term Elmer has probably been in use since at least the 1950's (I'm told, but haven't yet confirmed, that it appears in British amateur radio publications from that period). The name Elmer was likely chosen because Elmers are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two. The first U.S. reference to Elmer in print was from Rod Newkirk, W9BRD, in his "How's DX" column in QST from the early-to-mid-1970's.

Such Elmers have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies. Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer Today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

How do I become an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers may register via my formatted, on-line, World-Wide Web Registration Form:

http://www.novia.net/~pschleck/elmers/register.html

I would prefer that you register using the above form (which not only ensures that nothing is omitted, but also makes adding your entry much easier by automatically converting it to HTML). However, volunteers who are not yet on the Web are also quite welcome, and may register by writing me at elmers-request@novia.net with their name, amateur radio callsign(s) (if any), E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages, FTP archives, mail servers, or mailing lists, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@novia.net, the default Reply-To: of this message when posted to Usenet News). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt.

Also, an unfortunate increase in the amount of unsolicited junk-mail that I receive (often dozens of messages _every day_) has forced me to become much more ruthless about filtering incoming E-mail. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not only not get reviewed for some time, my incoming mail filter (procmail) may even bounce it back to the sender if it can't be automatically categorized as originating from known, friendly senders or have known, welcome keywords in the headers (Elmer is obviously one of those keywords).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use the Mailing-List or Mail-Server options:

World-Wide Web (WWW):

This is the recommended method for accessing the Elmers list, as it allows this resource to be viewed as hypertext. The home site at www.novia.net features immediate updates each month, hypertext-linked subject and geographic indexes, keyword searching, and registration and feedback forms. The other two sites use automatically-converted versions of the Usenet news articles, but are still usable, particularly if you are outside North America. The site marked with an asterisk also offers Wide-Area Information Service (WAIS) index searching by keyword for all Usenet News FAQ's:

* http://www.novia.net/~pschleck/elmers/
* http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html
* http://www.cs.ruu.nl/cgi-bin/faqwais *

(_Note:_ Because of maintenance problems - FAQ documents not being promptly updated in particular - the sites at Ohio State and Smart Pages are no longer recommended for accessing a current copy of the Elmers List and have been removed from the above list.)

see also the newsgroups under comp.infosystems.www.* (I haven't listed URL's for all of the newsgroups under this hierarchy as there are now about a dozen of them (!!!).)

Usenet News:

This was the original distribution medium for the Elmers list. It continues to be supported for users who cannot access the World-Wide Web. Since the document uses URL's throughout, the news article version may also be viewed as hypertext via some mail and news readers. The latest copy of the list can be found in the news articles with Subjects like _"Amateur Radio: Elmers Resource Directory Part */* [*-*]"_ (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

* news:rec.radio.amateur.misc
* news:rec.radio.info
* news:rec.answers
* news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news

sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news@localhost" or "usenet@localhost") if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

Anonymous FTP:

If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

* ftp://ftp.novia.net/customers/pschleck/elmers/
* ftp://ftp.cs.buffalo.edu/pub/ham-radio/
* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

Internet Gopher:

The latest copy of the list should be available from the following Gopher sites:

* gopher://gopher.univ-lyon1.fr/
* gopher://ftp.win.tue.nl/
* gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

Mailing-List:

Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

Mail-Server:

If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/README
send usenet/news.answers/radio/ham-radio/elmers/index/subject/part1
send usenet/news.answers/radio/ham-radio/elmers/index/subject/part2
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/list/part4
send usenet/news.answers/radio/ham-radio/elmers/list/part5
send usenet/news.answers/radio/ham-radio/elmers/list/part6
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

Acknowledgements

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for making this service a success.

* Colwell (Advanced Computer Controls and Link Communications
Repeater Controllers Mailing Lists)
* Custer (including Building and Link Systems)
* DeWolf (Repeater Linking, St. Lawrence Valley Repeater Council
Frequency Coordinator, Past President of the Champlain Regional
Repeater Association)
* Gray
* Harris
* Hendershot
* Hockaday (10 meters through 900 Mhz, including ATV)
* Ihry
* Jackson
* Kincaid

* Long
* Mello (Building and Cavity Tuning)
* Meredith
* Nichols
* Richards
* Richardson, G
* Riddell
* Rymell (President of the Bald Eagle Repeater Association,
Pennsylvania)
* Schaefer
* Sefranek
* Seiler (1.2 GHz ATV)
* Smith, J
* Sohl, R
* Springman
* Wetzel
* Wilkins (including UHF)
* Witte (VHF and UHF)

SAFETY

* Balbert (Electrical and RF)
* Boccardi (Electrical/Grounding)
* Chatham (Electrical)
* Crenshaw (Electrical)
* Danaher (RF)
* Forman (RF)
* Gieszczykiewicz (Electrical)
* Gray (Chemical and Electrical)
* Hare (RF Exposure Regulations)
* Harris (Electrical and RF)
* Hawks (Electrical and RF, including ELF and VLF)
* Hendershot (Electrical and RF)
* Hennigan (Electrical and RF)
* Ihry (Electrical and RF)
* Jackson (Electrical and RF)
* Kolb (Electrical)
* Lacouture (Electrical and RF)
* Long (Electrical and RF)
* Mosley (Electrical)
* Nutter (Electrical)
* Ornitz (Chemicals, Toxic Materials, Antique/Boatanchor
Refurbishing)
* Paperman (RF)
* Rego (Electrical and RF)
* Richardson, G (RF)
* Richardson, H
* Robinson (Chemical)
* Ruggiano
* Salnick (Chemical)
* Scholz (Electrical)

* Shears (Electrical and RF)
* Smith, D (Electrical)
* Stanley (RF)
* Taubman (RF)
* Turner (Software)
* Winward (Electrical)

SATELLITES/ORBITAL SATELLITE CARRYING AMATEUR RADIO (OSCAR)/SHUTTLE AMATEUR RADIO EXPERIMENT (SAREX)

* Anderson
* Bauer (OSCAR, AMSAT VP for Manned Space Activities, Chief Member of SAREX Working Group, NASA/SAREX WWW Page)
* Beech (including PACSAT's)
* Bertolino (RadioSputniks and DOVE Telemetry)
* Bouthillier (OSCAR)
* Hendershot
* Karn (SQPSK Software Modem)
* Lacouture (OSCAR)
* Lipscomb
* Marchant (OSCAR, SAREX School Group Technical Mentor)
* Morris
* Nichols
* Nutter (SAREX)
* Redding, T (SAREX)
* Richardson, G (OSCAR)
* Seiler (Low and High Orbit, 9600 Baud Digital)
* Stillinger
* Vekinis (Picosat System and WWW Page)
* Williams (Extra-Terrestrial Amateur Satellites and Probes Mailing List)
* Williamson (InstantTrack, OrbitDRV, AMSAT Services)

SCOUTING

* Ammar
* Biccum (Cub Scout Den Leader)
* Goldberg (ScoutRadio WWW Page)
* Rymell (Radio Merit Badge Counselor)
* Sohl, B (Radio Merit Badge Counselor)
* Steinke (Trustee, Northwest Suburban Council of Illinois Club, W9BSA)
* Weingarten

SEARCH FOR EXTRATERRESTRIAL INTELLIGENCE (SETI)

* Miller
* Shuch (SETI League Executive Director and WWW Page)
* Smit (WWW Page)
* Stern

SEMINARS/LECTURES/OTHER CLUB ACTIVITIES

* Anderson
* Ayers
* Boccardi
* Calvert
* Emm
* Hendershot
* Henderson
* Hughes
* Humphries
* Johnson, D
* Lacouture
* Nickolaus (Nebraska Packet Symposiums and Regional Ham Radio Conventions)
* Paperman (EMI/RFI)
* Redding, T (Club Growth Techniques)
* Richardson, G
* Richardson, H
* Robinson
* Rosenfeld
* Schaefer
* Schleck (Omaha/Lincoln, NE and Council Bluffs, IA)
* Sussman (Speaker and Host of PACTOR Forum at Dayton Hamvention)
* Watters

SPREAD SPECTRUM

* Bible (WWW Page)
* Brooks
* Hendershot
* Ihry
* Jones (TAPR President, WWW Pages, FTP Archives, Mailing Lists, and Membership Info)
* Karn
* Taubman

TELEVISION, FAST-SCAN (ATV)

* Hammill
* Hendershot
* Hockaday
* Larson
* Nichols
* Pawson (British Amateur Television Club WWW Page)
* Richardson, G
* Ruh (ATV Quarterly)
* Seiler (1.2 GHz, including Portable)
* Short (BitBucket Specialized Techniques Mailing List)
* Sohl, R
* White

TELEVISION, SLOW-SCAN (SSTV)

* Cieslak, C
* Langner (including FAQ and WWW Page)
* Short (including BitBucket Specialized Techniques Mailing List)
* Sohl, R

TOWERS

* Avnet (and Grounding Systems)
* Aydogmus, B
* Aydogmus, N
* Balbert
* Bouthillier
* Gray
* Harper
* Harris
* Hockaday
* Ihry
* Morrissey
* Richards

* Sefranek
* Sohl, R
* Thompson
* Veach
* Winchell

TUCSON AMATEUR PACKET RADIO (TAPR)

* Ackermann (Net-SIG Mailing List, Vice President, and Board Member, Author of Wireless Networking Books)
* Bible (Spread Spectrum WWW Page)
* Bourne
* Elmore, G (N6GN's Higher Speed Packet WWW Page)
* Estey (North American Digital Systems Directory WWW Page)
* Goldstein (WWW Page, TNC-2 Firmware)
* Jones (TAPR President, WWW Pages, FTP Archives, Mailing Lists, and Membership Info)
* Nichols
* Pitts

UNIX AND CLONES

* Ackermann (including TNOS/Linux BBS and Linux Native-AX.25 Switch)
* Angus (including SCO Xenix TCP/IP and Sendmail)
* Beech
* Boyce (Linux)
* Buydens
* Carruth (System Administration, Phoenix, AZ Linux Users Group)

* Caserta (Linux)
* Chatham
* Cieslak, C (including System, WWW, and FTP Administration)
* Cole (including Linux)
* Dawson (Linux HAM and AX.25 HOWTO's)
* DuBois (SysV Kernel, Applications, Device Drivers, and Networking)
* Gieszczykiewicz
* Harris
* Myers
* Pitts
* Reeves
* Rhea
* Sefranek
* Stern
* Stocking
* Thomson
* Tynkov
* Waller
* Weingarten
* Williams (including Programming)

VERY HIGH FREQUENCY (VHF)/ULTRA HIGH FREQUENCY (UHF)

* Ammar
* Anderson
* Arthur (including 440 MHz Repeaters)
* Avnet (VHF/UHF and Repeaters)
* Ayers
* Balbert (VHF)
* Beech (VHF/UHF)
* Bouthillier (VHF)
* Brooks (VHF/UHF)
* Caserta (VHF)
* Chatham
* Coffee (6 meters and Contests)
* Custer
* Di Mattia
* Eisenberg
* Emm
* Forman
* Gapinski (VHF CW Meteor Scatter)
* Gray
* Hammill (including ATV, Weak Signal, and DX)
* Harper
* Harris
* Hendershot
* Hockaday (6m, 2m, 1.25m, 70cm, 33cm, 23cm, FM, Repeaters, and Weak Signal)
* Humphries (2m FM)
* Ihry (VHF/UHF)
* Laakkonen (VHF)

* Larson (Weak Signal)
* Lau (CW/SSB to 222 Mhz)
* Lowman
* Mello (VHF/UHF, including Mobile and Repeaters)
* Meredith
* Miller (VHF/UHF)
* Morris
* Mosley (VHF)
* Myers
* Nichols
* Nugent
* Petri (Weak Signal)
* Pitts (VHF)
* Pozzi
* Redding, J (VHF/UHF)

Amateur Radio: Elmers Resource Directory

More information about this list can be found in the companion posting
to this file, "Amateur Radio: Elmers List Info and Administrivia."

73, Paul, K3FU

- A -

John Ackermann N8UR

jra@febo.com

http://www.febo.com/

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

I'm now working heavily with Linux, and help run a TNOS/Linux BBS, and
a Linux native-AX.25 switch. Although I'm not "the world's greatest
authority" on either, I'd be happy to help folks with questions to the
extent I can.

I've developed some experience with full-duplex packet repeaters. I've
built 2 19.2 repeaters, and am working on a 9600 Baud one now.

My World-Wide Web Page above has a reasonable set of resources for
digital networking, including HTML versions of some of my work, sample
configuration files for Linux AX.25, and some Linux software tools, as
well as the Ohio IP address coordination info.

I've just finished writing a book on TCP/IP that TAPR will publish
(hopefully) by the end of the year. It'll be called _Networking
Without Wires_ and is a completely rewritten, and greatly expanded,
version of the old _IntroNOS_ document I wrote several years ago. In
the meantime, I've made the old _IntroNOS_ available in HTML format on

my World-Wide Web Page above.

TAPR (Tucson Amateur Packet Radio) has formed a special interest group to discuss issues of regional packet networking (Net-SIG). As a result, the TAPR net-sig mailing list was born, and is now ready for operation.

This list is <not> intended to replace any of the existing packet-related mailing lists. Its purpose is provide a medium for communications among those interested in packet radio networking, both dealing with technical issues and political/regulatory ones. We'll discuss things like how the potential 219MHz band will fit into the networking picture, how to link areas using different networking schemes, how to set network parameters, etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details about the Net-SIG (including upcoming conferences).

TAPR Vice President and Board Member

Joint ampr.org IP Coordinator for Ohio subnet (44.71.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@febo.com

which is a mailing list read by a team of coordinators.

[_Editor's note:_ All ampr.org coordinators are listed in the document at:

David Andrews ZL2SX

andrews@clear.net.nz

I have been involved with the Amateur Radio International Travel Host scheme. I also chair the NZART Frequency Management and Technical Advisory Group, which is responsible for all repeater coordination and band-planning (LF, MF, HF, VHF, UHF, and above) in New Zealand. I would be pleased to answer any queries with regard to reciprocal licensing or frequency coordination that may arise.

Jeff Angus WA6FWI

jangus@skyld.grendel.com

I run NOS as a tcp/ip <--> AX.25 mail bbs gateway. I also run a few
nodes, And, I have successfully installed UUPC/extended 1.11k and
SNEWS for those MS-DOS afficionados out there. SCO UNIX, Win95
networking information available.

I work small contests and do a little bit of DXing on 17 and 10 meters. I set up our club's Field Day activities last year. I do a lot of computer work on IBM/compatibles and a lot of Internet work. I used to do a lot of digital work, including running a BBS and node, but am no longer involved in packet. I am in the process of building a 440 MHz repeater and am the programmer of the KE4ZIM repeater controller. I really enjoy working with youth in general.

Same server of the IK4LZH site for QSL MANAGERS.

I am an IOTA chaser, I work DX and I join contests. Actually I'm in
love with RS sats and DOVE telemetry. I'm the Shortwave Listening
(SWL) coordinator of the Italian Amateur Radio Association and I have
a regular SWL page in their official magazine Radio Rivista. Recently
I joined the 425 gang that produces the 425 DX News bulletin. I
translate it into English and send it to many DXers via E-mail. I also
maintain a WWW page to provide the bulletins graphically with previous
numbers and more to come. I've been an SWL since 1974 when I received
a receiver as gift from my parents. Now I'm 36 and I'm running also a
free BBS devoted to HAM/SWL.

American Radio Relay League | Justice is being allowed to do whatever
225 Main St. | I like. Injustice is whatever prevents
Newington, CT 06111 USA | my doing so. -- Samuel Johnson

American Radio Relay League (ARRL) Webmaster

The American Radio Relay League is pleased to announce the startup of
ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams,
carrying ARRL news, details on upcoming hamfests, conventions and
Amateur Radio examinations, the ARRL Publications catalog, information
of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich,
WY1Z, and the other Boston Amateur Radio Club volunteers who've worked
since December 1994 to keep ARRL up and coming on the Web via the ARRL
home page they installed and maintained at oak.oakland.edu. Their
volunteerism helped show us that upgrading our Internet connection to
a level that allowed on-campus Web service would be essential to
ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger
and better are _essential_ to its ongoing success, so please drop by
and say hello!

I have been with Linux since it was first available. I have been a keen homebrewer for over 30 years, but I don't do much now due to lack of time. I have built lots of HF gear, including synthesized gear, and also a lot of test gear. I have also homebrewed magnetic loops, which

is great fun. I have put together PC's and help other people with
Linux issues. On packet, I run TCP/IP using LNET which is
WAMPES-adapted for the UK by Darryl, G7LED.

During the school year, I am in Baltimore trying to set up a college
ARC at University of Maryland, Baltimore County. During the winter and
summer, I am in New Jersey. I am active in ARES/RACES/NTS and local
clubs in both areas, and would be glad to help other young people get
into the hobby of Amateur Radio, particularly in the interests of
Public Service and Disaster Management.

Rusty Carruth N7IKQ

Rusty Carruth aka N7IKQ aka rusty@indirect.com (NIC: RC541)
The Phoenix Linux User's group has formed! Details: me.

* Callsign Data
* Mobile/Portable/Field Day (FM, HT's, 10m SSB)

I'm willing to act as a reference for anyone wanting info on getting tapes (especially Callsign tapes) from the Department of Commerce National Technical Information Service (NTIS) or wanting other info on callsign-project related stuff.

One of these days I'll actually be around for the un-net! I promise, really!

My job is currently System Administrator for a large UNIX site so I know a little bit about day-to-day UNIX operations and UNIX installation :-) I also have much experience with constructing E-mail paths that will work rather than bounce.

I also have a fair amount of experience in hardware/software interfacing and machine control.

I'm the 425 DX News Mailing List maintainer. Further info at:

http://www-dx.deis.unibo.it/htdx/

I'm the webmaster for:

http://www.fr.flashnet.it

(maybe soon www.saiu.it) and the FTP owner of:

ftp://ftp.fr.flashnet.it/

There's a /pub/ham directory there. There's not much at the moment but
you may use it if you want. Just send new software under /incoming
including a file which tells what kind of software it is.

Expertise includes anything related to the Internet.

I used to work HF, mostly CW and QRP.

I also love Linux but never used it for ham radio, except for a
satellite tracking software :)

(Exams for Del Norte County every other month)

I've been a ham since 1933. I taught electronics, AC, DC, and radar principles/theory at the U.S. Army Signal Corps School at Fort Monmouth, NJ during World War II. I was chief engineer at KDB in Santa Barbara, CA from 1946 to 1951. I was engineer and technical director at NBC TV studios in Hollywood and Burbank from 1951 to 1982. I have one student now going for his General and prefer to teach the overall picture. I have done little or no benchwork on new equipment in the last 15 years. I'm still learning digital theory and techniques, but boards filled with chips do not evoke a sense of familiarity or recognition. I'm also still learning about the Internet.

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
P.O. Box 636
Griffin, GA 30224-0636
USA

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

PGH SATERN - Primary repeater system for Salvation Army

Maintainer of Link Communication List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/link.html

Only present users of Link Communication Products are welcome to join the list server. If you need information on Link Communications Products, contact them directly. Presently there are aprox 325 Members on the list server.

Maintainer of ACC List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/acc.html

The ACC list has approximately 300 members at this time. I am trying
to restrict the list to only ACC users (control people) and owners.
The list is also supported by the new owner of all the rights to ACC,
Link Communications. I am also running the Link repeater controller
list server. It has approximately 90 members at this time. The way to
join the list server is to send me a short E-mail and tell me what
equipment you are using. (Note: I have no ties to Link Communications
or ACC. I started the Link list first and found how useful it is. I
had a lot of requests to start the ACC list and did it.)

I've been an active Linux advocate since it first appeared on the Internet. I was looking for an operating system that would better meet the needs of my interest in Amateur Radio and provide me with an environment in which I could actively experiment and develop. Linux provides that and I've been promoting its use within Amateur Radio ever since.

I'm an early contributing member of the Linux Documentation Project, and you'll find the amassed works for it at:

http://sunsite.unc.edu/mdw/

ampr.org IP Coordinator for Sydney, Australia Metropolitan Area subnet
(44.136.xxx.xxx)

(I'm also the co-administrator of the Sydney (Australia) University of
Technology Internet/ampr.org gateway.)

I'm happy to assist with information relating to:

* Linux, especially when related to Amateur Radio.
* Amateur Radio Internet Gateways

I am available most days; work from home. I am especially interested in teaching the practical side of ham radio technology. I will help troubleshoot kits, old radios, etc., but will expect the new or

prospective ham to pitch in.

Expertise gained from over 40 years of ham radio and almost as many
years in broadcast engineering.

I have been a radio amateur since 1954, first licensed as KN2HYZ in
Peekskill, New York at the age of 14. I have been active in periods
ever since, never losing the ham spirit.

I would like to be involved in helping young people start in ham
radio. Especially those who are already licensed and are "lost"
looking for ways to operate or set up a station.

North American Digital Systems Directory World-Wide Web Page:

(Sponsored by Tucson Amateur Packet Radio, TAPR)

http://www.tapr.org/directory/

The purpose of the Digital Systems Directory is not to manage, coordinate, or regulate the usage of digital systems, but to provide the most up to date and accurate listing of digital systems that can be provided. Neither is it a formal organization, but a mechanism to allow regional groups to provide and share information regarding digital systems.

The Digital Systems Directory listing is intended for use by individuals to further their enjoyment of the hobby and by organizations to help plan and develop digital networks.

Please direct any submissions, feedback, or administrivia to my E-mail address above.

I am a practicing electronics engineer (for over 35 years) with expertise in solving problems in the design of linear circuits, audio signal processors, low frequency (DC to 10 MHz), low noise, field effect devices, power supplies, batteries, and similar analog situations. I'd be glad to assist others in the solution of their electronic problems in these and tangential areas. I started in ham radio as a kid in the 50's, vacuum tubes, motor generators, and most everything related to WWII surplus equipment. Was a design engineer at Texas Instruments for several years in the heyday of discrete devices and linear integrated circuits, mostly for military and surveillance use. My present concentration is toward digital telephonic communications. Have now gotten pretty familiar with use of the Internet. I guess it goes without emphasis that my capability goes beyond the areas I listed as being most competent, but I could be a resource you may apply as you feel my experiences would be helpful.

I am especially interested in VHF/UHF and microwave amateur bands as
well as Amateur television. I am treasurer and a founding member of
the newly-formed Triangle Amateur Television Association in
Raleigh-Durham-Chapel Hill, NC. I am willing to share my expertise in
the following areas:

* ATV - Getting started, starting local activity, repeaters.
* VHF/UHF - Propagation, what you need to get started, operating
portable, contesting, weak signals, and DX.
* Sealed Lead Acid Batteries - How to take care of them.

ARRL Laboratory Engineer

* Radio Frequency Interference (RFI) matters
* RF Exposure Safety/Regulations
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111, USA. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the ARRL Info Server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111, USA. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many EMI/RFI files are also available from the ARRL Info Server. See Mary Robertson's entry for more information.

ARRL Technical Information Service Coordinator (tis@arrl.org)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many TIS files are also available via the ARRL Info Server. See Mary Robertson's entry for more information.

See Jon Bloom's entry for information about the ARRL World-Wide Web Home Page.

I am a Civil Engineer by training and a DX'er by choice. My Elmer taught me how to work pile-ups and how to build antennas, having put

up 12 towers all over 100 feet. I know what it takes to get a tower up. I don't climb anymore, but have a lot of info. I like working on antennas and have several big Moseleys up in the air. It would be great to pass on what I have learned, as we are not all born knowing how to do everything, and the older I get, the smarter my father gets.

I have extensive experience in ELF, VLF, and RF non-ionizing radiation tests from the Hebrew University Environmental/Occupational Department at Ein Kerem Hadassah Medical School, Jerusalem Israel. I have just returned to the USA after 13 years in the field in Israel. My tests have involved Overhead Power lines, Antenna Systems, Cellular phone, CRT's, etc. I had been on staff at the Medical School for several years, working very closely with Dr. Milton Gordon (4X1AA, SK) and Dr. Elhud Richter. My reports were used to make the environment a safer place for children and adults alike.

http://www.radiodesign.com/

Assistant EC for Josephine County (Oregon) ARES/RACES

I am involved in commercial RF and wireless design, and willing to share experience with other amateurs. I have a complete test equipment facility for checking radios, antennas, etc.

Local NEWSLINE outlet: Program airs on the 147.30 repeater right after the Monday night net.

I am active on HF, VHF and UHF, including voice and digital modes, and
will help in whatever areas I can for most of Southern Oregon.

Dan Henderson N1ND

dbhenders@worldnet.att.net

+1 (704) 684-6339

P.O. Box 188

* ARES/RACES/SKYWARN
* CW
* Field Day
* HF/Contesting/DX
* Novice/Tech Instruction
* RFI
* Seminars/Lectures
* Volunteer Examiner (WCARS VEC)

I've been licensed over 25 years. I was one of the first VE's
certified by WCARS VEC. I have served for several years as a
proofreader for the NCVEC Question Pool Committee. I work closely with
the WCARS Directors, and am an active VE with that organization

I have been involved with Emergency Communications and Traffic
handling from almost day one, having earned my first BPL at age 16 as
a novice. I have served as Assistant EC, County EC and currently serve
as District Emergency Coordinator for ARES/RACES and District Radio
Officer for Emergency Management Area F of North Carolina. I also
coordinate SKYWARN activities in our area.

I have served as Hamfest chairman, assistant chair, etc., as well as
an officer of the local club, the Western Carolina Amateur Radio
Society. I designed our homepage, am quartermaster of club equipment,
and carry the keys to the club repeater. I frequently teach both
theory and code for local Novice/Tech classes.

I have been Field Day Chairman for five years, serve on the RFI
committee, hold WAS Awards both as a Novice CW operator and SSB Extra
Class, a DXCC with 86 of them worked as a Novice. I am also the
National Board Chairman of the Geratol Net, a WAS net which meets
nightly from October thru April. I also am chairman of the local
club's packet committee.

I "dabble" in helping newcomers make dipoles and other simple HF
antennas and am frequently a new licensees first contact. (A debt I am
repaying to my three trusty Elmers of so many years ago, two of whom
are now silent keys)

I would be willing to help in these general areas on-line or close-by
on the phone or in person. (I am a college professor by trade)

* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list,
with the blessings of Paul Prescott, N1AAC, who took over from Our
Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over
the rec.radio.amateur.* Working Group mail list, formerly maintained
by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to
homebrewing tube transmitters and receivers ("Glowbugs," a sort of
intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@theporch.com (*)
* glowbugs@theporch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a subscription-only list, with $12 US per year as "dues" to support the list.

With monthly costs for Net access at $350 US/month and telephone line charges of $50 US plus, we are not getting rich. The fee was set after much consultation and wrangling, and was designed to cover the costs of running the list... and hopefully provide a surplus to upgrade the services we can provide, like better mail delivery, larger archives, etc.

The new automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

I am 36 years old, have been a ham for 22 years, and currently hold an Extra class amateur license. I got my first ticket when I was 14 years old, thanks to my Elmer who is now a silent key.

I am an instructor for amateur radio classes, Novice through General, and teach CW at least once per year. I am also the VE team liaison for the TEARA VE team, and test monthly in Smithfield, NC.

I maintain a number of repeaters from 10 meters through 900 MHz including ATV. I build a lot, and enjoy restoration/construction of vacuum tube amateur gear.

I enjoy ragchewing and DXing, with about 75% of my operating time on HF spent on CW. I also enjoy weak signal and FM operation on 6, 2, 1.25m, 70cm, and 33cm. I am experimenting on 23cm and 10 GHz.

I maintain a number of sites, some of which are related to amateur radio. The URLs are:

Civil Air Patrol (CAP)

I was Communications Officer and former unit Landstation Bluebird 284, 1980-87. Statistically, Landstations are relatively rare. A land station in CAP is an HF-capable station operating from both mobile and permanent locations as needed. As a land station, I checked into several regional nets for the Missouri Wing of the CAP. I am familiar with the CAP emergency protocol as well as MARS and ARRL. Also, I have extensive teaching experience for Novice to General levels and currently am a teacher.

I am an Extra class operator. I work professionally as a manager of a computer services department in a large hospital system with more than 12 years experience in PC and Host Systems networking, I hold a degree in Electronics Engineering, as well as many hours in Computer Science Engineering. I operated a land-line BBS for 8 years, and now maintain a packet mail drop on 145.01 MHz. I maintain the TriCounty Amateur Radio Club (TCARC) of North Texas home page on the web:

http://www.qsl.net/tcarc-ntx/

and am the President of the TCARC. I am also the appointed Emergency Coordinator for the City of Azle for Tarrant County RACES.

I like to give talks to Amateur Radio Clubs, school groups, Scouts, and similar groups, mainly about Amateur Radio topics. Recent presentations I have done include Field Day preparation for clubs, Computers and Ham Radio, Building Your First Dipole. I'm open to presenting other topics as well. I also help local amateurs to prepare their own presentations and talks.

I am a Baptist minister, and would be delighted to administer a Ham Radio theme wedding! <grin> I would also provide ministerial services for Ham related special events.

I will also provide free Novice/Tech licensing instruction for groups
of 5 or more in the Tarrant/Parker/Wise County region of North Texas.
Typically this involves about 18 hours of lecture, and some self study
on the parts of the students. I'll do this free for nonprofit
endeavors.

P.S. I monitor 146.98 Boyd repeater while commuting, and you might
find me working HF CW just about any time.

ftp://ftp.tapr.org/tapr/

Log in as:

anonymous

with your E-mail address as password.

Via TAPR's Listserv (http://www.tapr.org/tapr/html/internet.html)

TAPR maintains several SIGs in various interest areas. To get the
latest list of SIG groups, send an E-mail message to:

listserv@tapr.org

with the subject line:

Request

and one or more of the following in the BODY of the message:

list

for list of mail groups on TAPR.ORG

information listname

(where listname is the name of the mail group)

to request the information on any mail group

subscribe list your_first_name your_last_name

(where list is the name of the mail list you want to join and
your_first_name and your_last_name are your first and last names,
respectively)

to subscribe

Some of the current SIGs include:

NETSIG Regional Networking SIG
BBSSIG BBS SIG
HFSIG SIG on HF Digital Topics
DSP-93 SIG for those that are building TAPR/AMSAT DSP-93 kits
APRSSIG SIG on APRS
TAPR-TNC SIG on TNC Issues
DSP SIG on general DSP topics
MIC-E SIG on supporting the TAPR APRS MicEncoder kit

TAPR-BB Announcement channel for TAPR bulletins and information

General Information about TAPR:

* Ever heard of a TNC?
* Interested in general packet radio information?
* Interested in Spread Spectrum Communications?
* Interested in high-speed packet operations?
* Interested in other types of digital communications?
* Interested in experimenting or building kits?
* Interested in keeping up-to-date on national digital and packet
issues?

Then you might be interested in TAPR!

Goals:

* Support Research and Development efforts in the area of amateur
digital communications
* Disseminate information on packet and digital communications
* Provide affordable and useful kits for experimenters and hobbyists
* Pursue and help advance the amateur art of communications through
publications, meetings, and standards

History:

If you have used a packet radio TNC, then you are already a part of
TAPR history.

The TNC (Terminal Node Controller) project was the first big project
that TAPR tackled and completed. Now TAPR covers a wide range of
interests including: APRS, Spread Spectrum, networking, Timing, DSP,
HF, and much more.

TAPR was founded in 1982 as a national organization with interests in the areas of packet and digital communications. Today, TAPR continues as a membership supported non-profit amateur educational research and development organization. TAPR currently has more than 2500 members, worldwide. TAPR continues to develop kits for the amateur community and is working actively on publications and communications standards.

Membership:

Membership in TAPR includes a subscription to the quarterly published Packet Status Register newsletter. PSR has been published since 1982 and is recognized as an authoritative source for up-to-date user and technical information on packet radio. Much of the material in PSR is timeless. Back issues may be obtained from the TAPR office. Membership in TAPR is $20 US for one year in USA, Canada, and Mexico. Outside North America is $25 US.

Join the amateur digital-revolution -- Join TAPR!

Phil Karn KA9Q

karn@unix.ka9q.ampr.org

http://people.qualcomm.com/karn/

High-Performance Software Modem Project

Recently I've been working on a prototype SQPSK (staggered quadrature phase shift keyed) modem for the amateur satellite channel. This modem is implemented totally in software running on a PC with an ordinary (non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB transceiver bandwidth.

I've made good progress and have put some info up on my web page about it, including an audio file to show what it sounds like in noise when the signal is still copyable, available from:

http://people.qualcomm.com/karn/ham.html

Watch that page for an announcement of when I actually release the code, which I plan to integrate into KA9Q NOS.

Spread Spectrum

I've been trying to answer the question of consequences of promoting relatively wide-band digital modes on band occupancy and throughput (i.e., What gets optimized? Are there tradeoffs in quality vs. quantity?) in the context of the spread spectrum rules debate, but I think it needs to be a much wider discussion. See my reply comments to the FCC on this issue:

http://people.qualcomm.com/karn/papers/index.html

(See also Steve Bible for more information on Spread Spectrum)

[_Editor's Note:_ I'm honored by the presence of many advanced-level Elmers in this directory, including Jeffrey Angus, Gary Coffman, and now Phil Karn. Phil has graciously agreed to appear in this directory for the purpose of elmering and technical exchange for the advanced topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "IBM PERSONAL COMPUTER (PC) AND CLONES" and "PACKET AND DIGITAL NETWORKING" categories in the Subject Quick-Search Index for a complete list.]

Alan Larson WA6AZP

larson@net.com
larson@w6yx.stanford.edu

My areas are fairly general, and I teach classes (Novice and Tech, with and without code, and upgrade sessions) at W6YX. My main audience is to the Stanford (University) community.

I am also involved with some less common modes, such as fast scan television and weak signal VHF and UHF.

Zack Lau W1VT

Zack Lau W1VT Expertise: Design of SSB/CW amateur transceivers
c/o ARRL Lab : up to 222 MHz. Design of transverters
Newington CT 06111 USA : up to 10.5 GHz. Basic lossy filter
+1 (860) 594-0200 : design. Developing repeatable projects
zlau@arrl.org : using cheap, easy to get parts.

I'm now starting to look into 24 GHz SSB/CW gear using 10 GHz as a convenient IF.

Especially looking to help anyone wanting to be a QST/QEX author--I can't write it all myself!

I'm with the Team Eifel ARS located in Bitburg Germany. We are a club
primarily set up for American Servicemen and Women in the Eifel Region
of Germany. We provide ARRL VEC test sessions and help individuals,
regardless of nationality, gain a U.S. license. This is accomplished
by providing study materials and teaching. We also provide assistance
in obtaining German Reciprocal licenses.

I have a fair background in packet, a general knowledge of satellites,
and I'm fairly knowledgeable in hiding antennas.

Fred Lloyd, AA7BQ flloyd@qrz.com
Scottsdale, Arizona | finger flloyd@qrz.com for PGP Key | http://www.qrz.com
USA | |
- --

Author of the QRZ! Ham Radio CDROM

I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data bfiles, frequency lists, etc., that would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 (602) 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous FTP server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can begin operating as soon as your callsign shows up in the online database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
USA
Tel. +1 (817) 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse Code training products are also available from every Radio Shack nationwide. Color photographs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 (817) 461-4663 anytime, including evenings

and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 (817) 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 (800) 322-1117.

Hospital Disaster Support Communications System (HDSCS) Coordinator

HDSCS World-Wide Web Page:

http://members.aol.com/emcom4hosp/

For over 15 years, the 90-plus members of the ARES/RACES-affiliated Hospital Disaster Support Communications System (HDSCS) of Orange County, California have served over 35 hospitals in nearly 50 emergency situations. At the new HDSCS site on the Web, you can find out how volunteer Amateur Radio operators can be an important backup communications resource for hospitals, if the hams are well organized and trained.

There you will find:

* How HDSCS organizes to support hospitals
* What "dedicated communicators" are and why they are important
* Frequently-Asked Questions about hams helping hospitals
* The surprising answer to "How often do hospitals need hams, anyway?"
* Response from hospitals served by HDSCS
* Info given to new HDSCS members
* Recruiting hams for hospital communications
* And lots more...

* Volunteer Examiner (ARRL VEC)

I have scratch-built all my antennas for all bands, written antenna programs, and experimented with many types of antennas over the past 38 years. I have been a ARRL VE for 5 years now, as well as team leader. I started in computers by building the Altair in about 1968, later switched to Radio Shack. In 1982, I started assembling Clones, and still do to this day (for a living). I have written code in Basic, Quick Basic and C.

I have built power supplies, both low-voltage-high-amperage and hi-voltage-low-amperage. I have wound my own transformers, one of which still runs my VHF station after 20 years of use.

It is very hard to pin-point what one knows, as we are constantly learning. Also, we must remember the old adage, "USE IT OR LOSE IT."

I've got at least a clue on using commercial radio gear for amateur radio (Motorola, GE, etc.).

I'm also an arm-chair FCC Part 97 "lawyer" ;-).

I am involved in training for new and upgrading Hams, paying back for Elmering received over the years as I came into Ham Radio. I am a VE for VEC's active in local area. I am most interested in assisting young, old, and handicapped persons to discover Ham Radio. However, I want to help anyone that is committed to getting a Ham license or upgrading. I am most active on Ham satellites, mobile and fixed HF, Digital modes and construction. I am an avid electronics constructor, repairer and experimenter. I am trying to sample all modes, bands, and interest areas. I am also skilled in Public Relations, demonstrations, and "de-mystifying."

Dakota County, Nebraska ARES Emergency Coordinator (EC)

ARRL Official Bulletin Station (OBS)

I have been involved in Packet since 1984. I currently run a Packet BBS with the F6FBB software, as well as a number of Packet Nodes using TheNet Software. I have coordinated the Volunteer Exam Session in this area for a number of years. I operate 2 meters and HF, both CW and SSB. DX'ing and Contesting are some of my activities, along with collecting prefixes.

I have had NWS spotter training and am part of organizing the spotter network in the Siouxland area. AS the EC of Dakota county, I work with the Woodbury County, Iowa EC in the spotter effort.

During my business activity as a Systems Engineer with IBM, I have developed some expertise in PC's and have worked with the DOS, Windows and Windows 95 Operating Systems along with many Ham-related applications.

I have organized a number of Ham events such as Packet Symposiums and am the current Chairman of a Regional Ham Radio Convention.

* Peter Parker's Projects Page

Following feedback from readers, I'm pleased to announce further improvements to my World-Wide Web Page.

The main change is the use of .gif images for the schematics and other diagrams instead of .bmp files. This dramatically reduces the size of the files (10k vs 141k). Also, it is now possible to view the schematics online.

Recently added is information on a simple 2m antenna for portable use. Information on other projects will be added as time permits.

You can get to these pages via the URL above.

+1 (937) 256-4355

Dayton, Ohio E-mail Elmers

Sponsored by the Miami Valley (Ohio) FM Association (MVFMA):

http://www.febo.com/

The Dayton E-mail Elmers service allows new or prospective hams in Dayton and Southwestern Ohio, or even experienced amateurs who are venturing into a new aspect of the hobby, to send an E-mail request for assistance. Volunteer on-line Elmers then can provide a response in the "Elmer" tradition of mentoring new or less-experienced hams.

Today, many hams prepare for their license exams through classroom programs, and the individual Elmer's touch isn't as common as it once was. The E-mail Elmer service is an attempt to restore this long tradition. The MVFMA hopes that the initial E-mail exchange will be the start of an ongoing Elmer relationship in the best tradition of Amateur Radio."

Hams may use the E-mail Elmer service simply by sending an E-mail message to:

elmer@febo.com

and posing the ham radio question they'd like to have answered. Users will get a machine-generated confirmation, and within a few days, they will get a response from one or more of the volunteer Elmers.

For more information, or to volunteer as an E-mail Elmer, contact me at my phone number or E-mail address above.

I have considerable experience in computers, some in packet, with an informal training in electronics. My background includes electronic surveillance countermeasures such as looking for interesting signals or wire connections with spectrum analyzers/receivers and TDR's, etc.

I'm not very active in operating, but have had a fair amount of experience when young.

I would prefer dealing with people in my local area, since many well-informed experts are available via the Internet.

Ken Pulfer VE3PU

jkpulfer@rac.ca
jkpulfer@igs.net

aq627@freenet.carleton.ca

Radio Amateurs of Canada (RAC) Treasurer and Webmaster

(RAC is Canada's national amateur radio society.)

RAC World-Wide Web Page:

http://www.rac.ca/

Callsign E-mail Addresses for All Interested Canadian Amateurs

Any licensed Canadian amateur radio operator can now have an E-mail address of the form:

callsign@rac.ca

This means that you will no longer have to advise all your contacts of any new E-mail address if you change your Internet service provider. Canadian amateurs will not have to keep track of dozens or hundreds of E-mail addresses. Just remembering the callsign is all they will need.

RAC is able to offer this free service thanks to the volunteer help and support of Information Gateway Services (IGS) of Kanata, Ontario, Canada, and in particular the work of Rene Kahle, VA3RDK. Rene developed the E-mail aliasing software, and set up the server hardware (IGS also donates server space for the RAC and ARAS World-Wide Web Pages that contain much useful information for Canadian amateurs).

If you wish to obtain a callsign E-mail address, simply send a message to:

alias@rac.ca

with:

callsign = realaddress

in the BODY of the message.

For example, if my callsign was VA4KP and my real (current) E-mail address was:

ham@qsy.ca

I would put the following in the BODY of the message:

VA4KP = ham@qsy.ca

Any subsequent mail addressed to:

VA4KP@rac.ca

would be redirected by the IGS server to:

ham@qsy.ca

Of course, such mail would NOT go anywhere near RAC headquarters, nor be seen by RAC officials, nor placed in a public database that could be exploited for "junk-mail" distribution. Any E-mail addressed directly to:

ham@qsy.ca

will also be delivered as in the past without passing through the IGS server.

The E-mail aliasing service is currently set up on a trial basis. If it works well and amateurs find it useful, it will remain available for all who wish to use it.

Courage Center
HANDI-HAM System
3915 Golden Valley Rd.
Golden Valley, MN 55422
USA

Manager, Courage HANDI-HAM System

I have information pertaining to Amateur Radio and physical
disabilities or sensory impairments, such as blindness.

Visit us on the World-Wide Web:

http://www.mtn.org/handiham/

HELP WANTED: READERS NEEDED BY HANDI-HAMS

The Courage HANDI-HAM Center needs volunteer readers to record ham
radio books and publications on audio tape. Volunteer readers provide
a valuable service to persons with severe physical disabilities and

sensory impairments who cannot use regular printed books.

Volunteers should hold an Amateur Radio license and be familiar with hobby terms and expressions. A clear speaking voice and the ability to read the written text of Amateur Radio books and describe the diagrams and pictures are essential.

HANDI-HAMS will provide a tech sheet and a sample tape to new volunteers, as well as a copy of the book to be read and cassette master tapes. Readers will need a good-quality cassette tape recorder and a quiet place to record. Some of the books we would ask readers to tape would be ARRL license manuals, special interest Amateur Radio books, and instruction manuals for radios.

This volunteer work can be done in one's own home, at one's own pace, as long as there is a quiet place to read. It is a wonderful way to share Amateur Radio with others!

AA9PW Amateur Radio Exam Practice World-Wide Web Page:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

This WWW site allows users to practice for the US Amateur Radio examinations on-line. The written examinations for all five classes, novice through extra, can be generated complete with figures, filled in on-line, and then graded. The results are presented question-by-question, and also graphically by subelement, so that users can identify areas which require further study.

More advanced options include saving the results of each examination a user takes on-line. These results can be used to monitor progress and also as a basis for generating exams tailored to a user's needs, ensuring that all questions are practiced.

Exams can also be generated and E-mailed to users without WWW access:

Send E-mail to exams@eeyore.biochem.mcw.edu with a line in the BODY of the message like:

generate novice

This will result in a novice exam being generated and E-mailed back to you with the answers included at the end of the E-mail. These exams lack the figures, so reference to a printed copy is advised! Simply replace "novice" with any of the other exam names (technician, general, advanced or extra) to get the other exams. To request multiple exams in one E-mail, write multiple "generate" lines.

Other exam resources such as the question pools, copies of the exam figures, and FCC Part 97 are also available. A comprehensive help page exists to guide users through the facilities of the site. All questions and queries are welcome!

==========
This message does not constitute any official or unofficial statement or
policy of American Turnkey or any other organization, corporation or
institution.

I just upgraded to Advanced, and am now working on Extra. Was first
licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited
equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when
the baby is asleep, so the XYL demands silent running. Besides, with
my wimpy wire, there is little point in trying to run voice.

ARRL Official Emergency Station (OES) and Local Government Liaison

I have experience with antennas (calculations, construction, and repair), all HF digital modes (including HF FAX), wiring of TNC's to radios, custom switchboxes for TNC's, radio modifications, math calculations, personal computers (DOS, Windows, Networking, and HTML), and of course, on-the-air operation and CW. I would love to work with young students wanting to become hams. I hope I can help.

I am currently a mature student at King's College, University of Aberdeen, studying for the B.Sc. (Hons.) Computing Science. I enter the third year of this course on 25th September 1997.

I run a telephone BBS in the Fidonet network. This is currently offline due to problems with the telephone line, but is expected to be back up in late September of 1997.

I also have my own IBM compatible computer, which has a P166 processor, 32M of RAM and a total of 4.6G of hard drive space, spread between three EIDE hard drives. This computer normally runs under the Linux operating system, and I am gradually moving the above Fidonet BBS system across from MSDOS to Linux. Because of the lack of suitable software under Linux, I am writing one myself, having had 15 years experience as a professional programmer.

I am a regular participant in AuroraMUSH, a MultiUser system, and have authored several patches to the suftware controlling it. It may be visited at:

telnet://amush.ml.org:4190/

I have been involved with Packet radio for over a decade now. Indeed, it was packet radio that got me interested in Amateur Radio in the first place.

I started up a mailing list connected with the Amateur Satellite world, currently using manual subscriptions. The list is:

Space.Repeater@cus.umist.ac.uk

and is for the discussion of the possibility of placing an amateur band repeater or transponder in orbit around a planet other than Earth, or on the surface of one of the other planets.

I will add that, although I can claim to be something of an expert on both Linux and Packet Radio, I am definitely NOT an expert on the two together.

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (The Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or

PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w#xxx and w#xxx-cis. Mail sent to w#xxx would go to your Internet address, and mail sent to w#xxx-cis would go to CompuServe. MCImail accounts have the form w#xxx-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed.
Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to
listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing
list maintenance. You may address membership requests to
martha@amsat.org, or send them by mail, phone, or fax to AMSAT
headquarters:

I used to run my own bulletin board system before the Internet came
along. I also do my own monthly newsletter called the _Hamband DX'er_
for many years. It is still going. I take care of the ARRL SWL Bureau.
My name is listed in any callbook under the various QSL bureaus. I am
an avid DX'er of the ham bands with over three hundred countries
confirmed. Presently I run my own WWW Page to help others with QSL
info requests.

DX QSL Info World-Wide Web Page:

http://www.coredcs.com/~mtw/

The DX QSL Info File is updated monthly. It is in Xbase format and runs under a variety of software, including:

* Dbase
* Vplus
* Totalham

Expertise:

Technical: Elbugs (incl. features like dot/dash memories, squeezing, touch sensors, auto spacing) Antennas used: Windom, Delta Loop, Trap Dipole, Marconi wire.

Operational: CW Operator since 1981, QRP Operation, Traffic handling nets (NTS, Swedish QTC nets) CW operating in several West European languages (Ham radio shorts, use of foreign CW characters in Italian, German, French, Spanish, and Swedish). QSLing (How to design a QSL that satisfies award hunters and operators of the QSL buro)

Club life: Mbr of AGCW, UFT, GQRP, HSC, VHSC, SMHSC, SCAG,...

Admin: License Regulations in Italy and Germany

Mathematics: Spherical Trigonometry, beam headings, calculation of sunset/sunrise times, etc.

Educational Advisor to the American Radio Relay League

I specialize in developing growth in volunteer organizations and have published and made public presentations on this subject.

I have written and published training/educational curriculums for Novice, and Tech Plus amateur radio licenses. Of interest is the fact that amateurs licensed through my courses are very likely to upgrade as evidenced by the high number of hams in the Lawton, Oklahoma area that hold Extra Class licenses.

I organized and conducted a SAREX in southwest Oklahoma that involved over 3,000 students in 21 schools in seven cities of southwest Oklahoma. The SAREX consisted of an essay contest with the winners being able to ask questions of the astronauts while they orbited the earth. The live SAREX was broadcasts over the Lawton, Oklahoma Public School systems cable television to the public in southwest Oklahoma.

More recently I have been involved in securing building permits in Florida to put up amateur radio towers in this highly restrictive State.

* Certified, NABER and ANSI 45.2 Level III Engineer

I am a consulting engineer, which takes me to various locations. My
home address is shown above and in the call book. I can answer E-mail
(as everyone knows) from anywhere that I may be.

Don't know where you are going to use a old horse like myself. I am
part of the old and part of the new displine. I have fabricated all my
wire antennas which includes the matching device (transformer) and
been building equipment for more than a quarter of a century. I also
manage to repair all my equipment - when parts are available. I
restore early age broadcast receivers and HF transceivers. I know the
old Heathkit HW100 and HW101 very well and built a Heathkit 5400
transceiver with matching Power Supply. I have constructed many
amplifiers and own a Swan, Collins (S-Line), Kenwood, Heathkit, and
Johnson. I am very active in the two meter band.

In addition, I have restored many an old Coleman Lanterns (which is very enjoyable) and also have some American Gas Machine Lanterns (1930's).

Senior Scientist, Radio Branch, Communications Division
NATO C3 Agency, P.O. Box 174, 2501CD The Hague
THE NETHERLANDS CompuServe: pdreynolds@compuserve.com

http://www.xs4all.nl/~pdr123/pdr-home.htm

I am very lucky in that I earn my living in radio communications, so my expertise is fairly broad (but not focused on amateur techniques only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over the years. I always enjoy discussing and researching a communications problem so if you don't see it listed above drop me a line anyway, especially if you happen to be in Europe.

I build the only coaxial antenna I have seen for amateur radio. I experiment with antennas from 80m to 440mhz. I am a retired 2-way radio senior technician with 25 years of service with Motorola C&E repairing, installing, and testing, of commercial 2-way radio equipment including pagers, portables, mobiles, base and control stations, repeaters, CCTV, communications consoles, remote control equipment, microwave and multiplex. I am familiar with the test equipment required to perform these duties. I write technical articles for our club newsletter. I am competent with both tube and transistor circuitry. I hold or have held an Extra Class Amateur Radio License, a First Class Commercial Radiotelephone License, a General Class Commercial Radiotelephone License, a California State Contractors License Class C63 (Communications), and two CET Certificates.

I am the Assistant Principal at Estill County High School in Irvine, KY and have been in the education business for the past 23 years. I enjoy helping people earn their ham radio license privileges. I have a test team with the WCARS group and have been testing for a good number of years. We have tested over 300 hams during the last three years.

I also have been in the repeater business since 1973 (146.820) and have held a ham license longer that any other resident of Estill County Kentucky. I am the fourth ham to be licensed in our community, the other three have either become Silent Keys or moved from our county. I am very proud to have held a ticket for almost thirty years. I hope through my experience with the local emergency team, I can also provide advice on EMS. I founded the local Rescue Squad in 1978 and am still President of the corporation. I was also the local DES Coordinator from 1977-1993.

Chuck Rippel WA4HHG

crippel@exis.net

Secretary, Collins Collectors Association

The Collins Collectors Association would like to invite those of you who have an interest in Collins Radio to subscribe to the now fully automated Collins Reflector. This service is sponsored by the CCA and is provided at no charge to Collins enthusiasts.

There is an FAQ which will hopefully be sent to each new subscriber when they "sign on." If you would like one and don't get it, drop me an E-mail at my address above.

There may be a few initial bumps and glitches at first but we hope those of you who choose to participate will enjoy it.

As of 1/6/97, the Collins Reflector will be fully automated and I will discontinue forwarding the mail manually as in the past.

The new automated list processor will be a real upgrade. It will enable you to get the material in nearly real time and does not require me to forward each message manually. You will get the material much quicker than before. The Collins Listserver behaves much like the Boatanchors list. Simply, you subscribe to the list, send it messages which it then "reflects" back out to all those who subscribe. This is done once every ten minutes.

You must resubscribe to the new listserver in order to continue to participate. The automated list server follows the same guidelines contained in the CCA FAQ. Please continue to follow those guidelines for posting and contributing.

Here is how to subscribe:

Send an E-mail message to:

listserv@listserv.tempe.gov

Leave the subject header of the message blank and in the BODY, simply type:

subscribe collins

The listprocessor will output an E-mail message back to you with easy to follow instructions asking for your confirmation. At that time, you will be asked to send a second E-mail message to the listserver. Follow those instructions exactly and send the second, confirmation, message to the listserver.

If all is successful, you will be signed up to the list and a complete set of instructions will be sent back to you in the form of an E-mail by the automated list server.

Finally, a very big thanks to Dave Kelly, AI7R and the City of Tempe, AZ who have graciously provided and set up the server. Dave and the Collins Collectors Association sponsor the Collins Reflector as a no charge benefit for Collins afficionados everywhere. Enjoy!

I have been a ham since 15. I have been an Extra class operator since age 17, and a VE since age 18. [_Editor's note:_ Possibly the youngest Contact VE ever.]

I am an avid HF QRP (low power) and mobile operator. I have spent literally hundreds of hours installing my mobile station (IC-706 and Screwdriver antenna, plus more grounding straps than I can remember) in my 1995 Neon.

Most of the time I operate QRP CW mobile.

Why? It challenges my operating skills as much as possible, plus QRP is safer (RF-wise) than is 100 or 1500 watts. With the effects of RF exposure still unknown, I don't feel like exposing myself to high-power RF fields any more than necessary, and if 3 watts will do the job, so be it, I'll emit it.

In addition, people are generally amazed when you mention that not only are you running just 3 measly watts output power, and on top of that you're doing it from your car as it's zipping down the Interstate at 65 mph. They just can't believe it's possible that less power than a nightlight is bouncing off the ionosphere and ground three times, and is still able to be detected 10,000 miles away.

I'm here to tell them it is.

I enjoy building kits, and consider myself to be a good builder.

I am a fair contest operator, and enjoy 35 WPM CW ragchews as well as hunting for DX.

I am active with both the Laurel (Maryland) and University of Maryland Amateur Radio Clubs, and operate with both during public service events. I have been the chief HF operator at University of Maryland HF-related events (Field Day and Sweepstakes) for the past three years.

As a Volunteer Examiner, I have conducted roughly 150 test sessions, testing at minimum a thousand applicants.

I have recently given Novice/Technician license instruction, as well as taught a 5 WPM code class. I have been told that I have a knack for

describing complex subjects in ways that make them far easier for laypeople to understand.

* Volunteer Examiner (ARRL and W5YI VEC)

My favorite aspect of amateur radio is contesting. It drives my station improvements and operating proficiency. I have played around with antennas and made various station modifications to improve my contact efficiency. Along the way I have solved some RFI problems, built many of my station accessories, installed and built some HF antennas, put up a small (40') tower, etc.

I volunteer as a RACES operator in no particular capacity. I help with a few VE test sessions a year mostly representing the ARRL VEC with the Burlington ARC team.

I work as a SRAM design/product engineer at IBM Microelectronics in Essex Junction, Vermont. I have been interested in electronics and computers since a young age, but only got my amateur radio license in 1993 as a Technician at the age of 31. I got to know the code and upgraded to Extra in February of 1994.

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can Elmer on most subjects, but not spread spectrum or packet.

I have nearly 30 years experience in electronic/computer service work. I enjoy designing, building, and operating vacuum tube and solid state equipment. I restore, test, repair, and operate antique radio equipment. The maximum power I use for daily operations is always below 100w, and most of the time, I operate at QRP (5w) or less! (More with less.) I have a real enthusiasm for building just about anything from nothing, as part of the homebrew aspect of the hobby. When not working DX, enjoying a good contest, or have a great time on Field Day, I watch over my 6m repeater, or work VHF packet. I am glad to be of help to those in need! I fully support the Elmer program as a means to bring new people into Amateur Radio. I teach Novice and Tech classes for aspiring Amateurs. I am also a merit badge instructor for the scouting program, and the advisor for the Bloomsburg University Amateur Radio Club.

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/ understanding at the burn-your-hand-with-a-soldering-iron level - is drifting out of ham radio. With Japanese radios which cost so much, fewer and fewer hams are willing to risk their warranty to service their own equipment. I would like to see a turn-around here...

Recently I undertook some academic research into packet radio using KA9Q's Multiple-Access/Collision Avoidance (MACA) link-layer protocol. I attempted a literature survey as well as some software simulations of the protocol (with varying degrees of success). I would welcome any opportunities to improve on my work, find out about any actual MACA implementations, share information, and build on my bibliography (available on request). More information about MACA may be obtained from:

http://www.novia.net/~pschleck/wireless.html

ARRL Technical Specialist

I am a pilot (N6141F) with more than 10 years as air and ground search and rescue. Active in ARES, RACES, and Civil Air Patrol (CAP West 41).

I also have a home in Alpine, Texas, USA.

I have started doing a weekend or four-night amateur radio licensing class that works great. I use the ARRL video course and it works super. We watch the tapes, answer questions and then spend a three-hour session giving them practice Novice and Technician tests, then reviewing each question they missed. We have even had students that had studied at home and just did the last session for review.

I now do four or six classes a year, some in Texas and some in New Mexico.

- - Well, I've been talking about it for years. Those of you that have
- - talked with me via E-mail know that. But this time I've actually
- - started on my rewrite of the callsign server at Buffalo. And I've
- - finally got a design that I'm happy with. The new searching
- - capabilities are going to be *much* improved over the current system.
- - I'll be getting rid of the bugs in the current telnet system and
- - making it available to more people. Also coming is a WWW front-end for
- - web surfers. Time to step into the 90s.
- -
- - Part of the rewrite is an entire reorganization of the database
- - look-up system. The old system was very specific to the FCC database
- - format because that's all that was available when it was written (yes,
- - the server is very, very old). But now there are a number of databases
- - floating around the net for different countries and I am rewriting the
- - system to be more flexible and to accommodate a variety of formats and
- - search types.
- -
- - In doing so, I'll have the ability to add data for many more
- - countries. That is, of course, if I have the data. In order to do this
- - I need help. I need to get in touch with all people that have access
- - to databases from countries other than the US. The more up-to-date
- - these databases are, the better. If you have access to a database and
- - would be willing to donate a copy to the callsign server for everyone
- - to use, please contact me. A lot of people would genuinely appreciate
- - it.
- -
- - The callsign server has become remarkably popular on the net and this
- - has happened because the community has contributed so much to it over
- - the many years it's been running. I have heard stories of reunions
- - with old classmates, stories of silent-keys that have been remembered,

```
- - and stories from blind hams doing simple look-ups of other hams, all
- - possible because of the server. Congratulations to the community for
- - making this system so useful.
- -
- - Work on this project has been delayed such that its completion time is
- - somewhere in the indefinite future. In the meantime you can access the
- - current server.
- -
- - Please direct all other feedback, submissions and administrivia
- - regarding these services to my E-mail address above.

I agree that he sounds like he would make a good ham, but you don't have
to transmit to enjoy radio. I use my scanner and SW resever far more
that I use any of my trancevers. I enjoy talking on the air, but I
enjoy lissening just as much.

I agree with you Mike except you do have a HAM license and you can either
listen or transmit. I do hope he does get a ham license as we need more good
people in this hobby to over shadow the few that cause the majority of the
problems.

David

Strange. I can imagine someone with a web site feeling happy that their
site is getting a lot of traffic because people find the content useful
or interesting.

But it takes someone twisted to be proud of wasting other peoples' time
looking at something that they were misled about.

I guess if you can't get attention for doing something worthwhile,
people will try to get attention for doing something useless.

Dave

>Well, let's see: Should you wind up in a situation where a passing cop
>with a rig you think is "illegal" could call for help, you seem to be saying
>that it is not okay with you for him to call it in. Your sense of horror
>at such an illegal act is such that you'd just as soon die, right?

My interpretation of the original posting is that he didn't think it
was OK for a police officer to buy a ham radio intending to use it out
of band for routine communications instead of buying a properly
certified commercial radio.

On the other hand, if the officer has both amateur and commercial radios,
and the commercial one just died for some reason, but the officer was in
or saw some sort of emergency, he might choose to use his ham radio which
can transmit on police frequencies to make a call. This may be still
illegal, but is *quite* a different circumstance than planning to
routinely use a ham radio instead of the proper commercial one.

You seem to be attacking someone for something they didn't say.

Dave

I agree with you, Rudi (KF6RLQ).
I found both sites to be very interesting and
educational! I might even try my hand at
QRP once again. I use to fiddle with an
Ameco AC-1 years ago. It might be nice
to try some transistor/twelve volt stuff.
These sites were a very helpful starting point.

We have a very effective weapon we use against SW broadcasters who
invade our Region 2 ham bands - we call it CBRambo (aka CBBimbo,
Drew, Spew, et al). We air-drop it onto your transmitter site
and have it stick pins in your transmission line, thus causing
your transmitter to melt down (of course, the CBRambo also melts,
but that is of no concern to us - it will quickly reappear under
a different AOL screen name).

PLEASE KEEP YOUR TRANSMISSIONS OUT OF THE REGION 2 HAM BANDS!! Alter
your antenna radiation pattern, if necessary.

Sincerely,
Jeff KH2PZ / KH6

How about hams who QRM international broadcasters? I taped a classic case of this in the 1980's, with a couple of hams "mooing along" with Radio Botswana's interval signal on 7255.

>Ed KA9EES

A further comment. The drift does occur, but it is not bad. You CAN
get a synthesizer that is stable, either the DFC 230 or the VFO 230
and that problem is fixed.

Now, consider the receiver in the 830 is not "up converting" and
that the first filter after the first mixer is a real narrow
crystal filter, you have very good strong signal handling next
to weak station performance. In fact, if you look around at the
specs, the 830 receiver stacks up very well (better than some)
many expensive new receivers. You do give up general coverage
and other doo-dads that are certainly nice, but the basic
receiver in the 830 is quite competitive in heavy QRM conditions,
like the 160 meter contest, hi hi.

The TS-520, (and others in this series of transceivers), have very effective noise blankers. However, like the maunals say, it only works on 'PULSE TYPE NOISE', which is like automobile spark plug, lightning crashes, etc...It will have no effect on qrm, lowband noise, etc...If you want to test the blanker, put the rig on ten meters, and observe the S meter. If the S meter seems to be deflected without (maybe jumping a bit), push the noise blanker button, and see if the S meter falls back toward 0. If there is no pulse type noise being picked up, you will not hear any difference with the noise blanker on or off !.....Dave

312. Anybody remember the ol Dentron Dublet?

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-06 00:00:00 UTC
From: Mike King KM0T <scsueepe@mtcnet.net>
Message-ID: <6vef6v$5rn$1@mtc1.mtcnet.net>
Source record: 160623

Hi all,

Anybody remeber the old company Dentron? They made tuners and antennas years ago. I have been away from the hobby for 17 years or so and I had some of there stuff back then. I was wondering if anybody remembered their Dublet or Doblet dipole. It was normally used as an inverted V, I believe fed with 450 ohm ladder line and a nice porcilain insulator in the middle. Used a Dentron antenna tuner to work 80 thru 10 meters on it. Sold it back then and now wondering what the lenght of the unit was. Does anybody else make the same antenna?

It looks like MFJ might have bought out Dentron, some of the product looks similar. They also have a dipole with the 450 ohm ladder line, is it modeled after the "ol Dublet"? I just cant remember the lenght.

Thanks alot for yer help

Mike - KM0T

I have what is probably a pretty stupid question. I just received a Comet SBB2 Antenna, Comet RS-820 antenna mount, and a length of Comet CK3M coaxial antenna cable that terminates in about 12 inches of very thin cable so that it won't screw up the weather stripping on my car.

My question is where do I attach a grounding wire to this contraption? Do I put a grounding wire between the metal washer and the nut that allows the attachment of the actual antenna connector at the end of the coax to the mount? It doesn't appear that there is anywhere on the mount itself to hook up a ground for the antenna, nor on the antenna itself.

I also note that the RS-820 came with what appears to be a 3.75 inche long stainless steel piece of metal about 1/16th of an inch thick. What is this for?

Thank you,

Brien

318. FCC Question and Answer Pool

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-06 00:00:00 UTC
From: RB <rolandburton@bigfoot.com>
Message-ID: <3619821B.2AB7F5A7@bigfoot.com>
Source record: 160673

Can anybody tell me what the Web address for the Question and Answer Pool is from the FCC? I need to take Elements 1,3,7,9 of the commercial exams. I downloaded them once before but lost the address. It's somewhere inside thier site at www.fcc.gov but I can't seem to find it.

Any help greatly appreciated!

Thanks,
Roland

Don,

Thanks for your reply.

I didn't want to directly advertise here since newsgroups are intended
for people exchanging information and ideas. I like to play by the
rules :)

To answer your questions... all of the details, including prices are
listed on the web page at www.pcbmilling.com

Board sizes range from 3.5"x5" to 7"x10" and there are no per hole
charges.

If you have any more questions please email me at
feedback@pcbmilling.com and I'll be glad to go into more detail.

Thanks and 73s

Mark

I have two questions about the Icom IC-2GXAT:

1. How do you enter PL frequency? I understand how to turn on and off the encoder and decoder, but cannot figure out how to set the tone frequency.

2. It seems to get into a mode where pressing the Function button on the side of the radio does nothing. What is happening, and how do you correct this?

Thanks VERY MUCH for any help you can give me!

Bart Hackemack wrote:

I am looking for some information regarding suppressing what appears to be ignition noise in my 1992 Toyota Pick Up. I am running an IC706-MKII in the PU. I can only work signals approximately S9 or higher while driving, on all bands.
>>

Since this noise is on all bands, I suspect that it may be coming in on the power cord. If this is the case, it can be eliminated, or at least greatly reduced, by the following:

1. Connect the radio DIRECTLY to the battery.
2. Loop many turns of one side of the power cable through a toroidal core.
3. Put a good size Tantalum (observe polarities) before and after the toroidal core.

You may also want to put a cap between the output of the alternator and ground.

(Someone correct me if I'm wrong, but doesn't a tantalum pass RF, where a regular electrolytic doesn't?)

Hope this helps.

I have a 706 in my Toyota and had the same problem. Make sure the
antenna is VERY well grounded. I also have ground straps on my doors,
hood, radiator, engine block, exhaust... I think that's it.. Also, do
not use the pre-amp. It's not the greatest, but it works fairly well.
Oh yea, a capacitor on the fuel pump.

Steve, check diode D-152 on the main board.
It is the reverse polarity protection diode.
You can find it at the right rear of the main board right next to the big transformer.

I am also a newbie, though I have been a SWL and a wannabe ham for almost 20 years. What I really wonder is, why is all the trash and bad manners on HF mostly confined to 75 meters? Yes, there is rudeness and profanity on other bands, but not nearly like it is on 75. Why is this, why not 40 or 20? What 'tradition' or habit or brain disorder makes the dumb-asses gravitate down there?

Exactly! As new (6 months, not counting 20 years as a SWL and wannabe ham) as I am to this hobby, I can tell you that it is much more fun to grab that rare DX at the bottom of the solar cycle on 6 meters. That is a challenge. There are a lot of us out here, even pimply faced newbies barely out of school (mea culpa), who retain the old ham values. Less is more. Skill counts far more than technology. Courtesy and honor are fundamental. "Problems" and gear failures and fixing them are the grist for the mill of "improving the radio art." I'll take my old Drake and channellized FM 2M mobile and some patience and ingenuity over a 160M-70cm all-mode, PC control, LL amp, and beams on a 1/2 wave tower. Contests and $4000 radios are for Type-A Jones-keeper-uppers with little joy in the hobby. Imagine, you can still get on the air DX and then some for 300 bucks and some brains and sweat!!! Amazing! Sssssh! Don't let KenYaeCom and Bill G. hear it!!!

The Wizard wrote:

From: Jose Carlos Herrero <jcherrero@infoproducts.es>
Message-ID: <6vfr5tjsj1@talia.mad.ibernet.es>
Source record: 160547

hi jim

The steps that I'd done to setup the x band repeater are as follow:

1 select a frecuency on 70 cm. band
2 select a frecuncy on 2 m. band
3 press CTRL key
4 Switch off the rig
5 Switch on while press the 2 meters band key
the 'PTT' label was flashing

to go out this mode you must do the step number 5

One more thing my rig is a TM-V7e and was modified on the store. I supose
that the american version didn't need those modifications.

Thanks 73 from Spain

I figure it's two things: Everyone seems to start out on 80/75 but most find the knob marked "Band" and use it quickly. Second, other bands have far better range than 80/75 and are affected by propagation and fading, meaning they can't be a complete pain in the ass all the time to everyone. Now if only everyone else could convince the broadcasters to get off 40 and start up on 80/75. ;)

Mostly it is the consistent propagation. These groups feed off each other,
and they know that the propagation will allow them to do that every night.
On the higher bands, propagation makes it difficult to reach every member
of a particular group consistently. Without that "audience feedback", most
of the obnoxious behavior isn't very satisfying.

> > If all you want is a card fine, but sure seems cold to me
> > AA7QA Mike
>
> Amateur radio is such a diversified service that one is able to find his own

nich should he choose to take the time to look. Traffic nets are a fine
and natural part of this service. The ARRL (American Radio Relay League)
was named this, based on the fact that radio at that time, was mainly
involved in relaying of messages, hence the name. Today this tradition is
still alive and well, and should remain so. Not everyone is cut from the
net nerd cloth however, which is also fine. We are able to do so many
things within this service that it actually boggles the mind. Most of us
will find one or two area's of interest and persue same. Unfortunatly the
problem comes up when one think's his particular "thing" is the most
important. This problem is as old a amateur radio itself, and is unlikely
to change.

Bottom line is enjoy it for what it is, and try not to detract from other's
enjoyment of their thing. With all this diversity, within the scope of
"Amateur Radio" we must keep one thing in perspective. Without the service
nets, the State nets, the national nets, INTERCON, Marintime mobil and ALL
the other's, we would not have a reason to exist. This is NOT A HOBBY, it
is a service. A license is NOT A RIGHT, it is a PRIVELIDGE.

So, find a way to put something back into the service. If you can't find or
think of something, then maybe it is not for you.

You can't do it. There are no cavities inside to filter out the 600kHz
offset. The filters are barely narrow enough to keep police/fire/pagers
out of the ham bands as it is. I think that somewhere in the manual it
states that the VHF/VHF and UHF/UHF x-band is also disabled in the firmware.

I thought it was hilarious!! I've completely given up trying to use 75 meters...if it's not some rude 4 call trying to run you off the frequency it's QRMers getting even for being stepped on by these jerks. What a waste of bandwidth.

The frequencies mentioned above are allocated for broadcasting
in the region in which they originate. Amateur bands vary from region to
region, and here in Europe the 80 metre amateur bandd runs from 3500 kHz
up to 3800 kHz. I would like to see the day when amateur band
allocations are universal, but I doubt if this will happen in my
lifetime.

perhaps you've heard the expression "shit always flows downstream"??
Be thankful for small favors that they stay there. However, the obvious
solution is use the option that comes with ALL radios..the tuning knob.
I, for one, am proud of the fact, that I can honestly say, I have never
listened to that group of clowns. A recommendation I am happy to pass
along to all..free of charge

Will, they are not dumb-asses, they are victims.

THEY ARE THE REASON, why the FCC has introduced those questions about RF Safety recently into the General Class question pool. These guys never heard about such safety considerations, and thus never cared.

If you need any proof for why rf safety is important, go to 75 and listen to the results of rf over-exposure :))

Yes, I know that very well. I've been on 80m for 22 years. I did not
ask him to QRT but rather, to do what's necessary (within his power)
to keep his transmissions out of Region 2.

Instead of him asking "Wonder if any listeners can pick up our signals
in the USA?!" a much more welcome query would have been "We're concerned
that our transmissions here in Region 1 might be causing QRM to Region 2
amateurs on their 80 and 40 meter bands. Please email interference
reports - include frequency, UTC date/time, signal strength, type and
orientation of antenna, receiver/transceiver. We will do what ever we
can within reason to lessen the QRM we're causing to Region 2 hams."

I would have sent him a great big "Thank-you" if he had sent that!

>I would like to see the day when amateur band
>allocations are universal, but I doubt if this will happen in my
>lifetime.

Be patient - it was brought up at the last ITU conference!

From: w1aw@arrl.org
To: QST@hawaii.edu
Subject: ARLB097 NTIA Report Bullish on Additional HF Allocations for Amateur
QST de W1AW
ARRL Bulletin 97 ARLB097
>From ARRL Headquarters
To all radio amateurs

High Frequency (3-30 MHz) Spectrum Planning Options, a planning
document released December 13 by the National Telecommunications and
Information Administration, says the HF spectrum is flexible enough
''to accommodate most, if not all,'' demands for additional HF
spectrum, including new and bigger HF ham bands. The NTIA is an
Executive Branch agency in the Department of Commerce that's
responsible for developing telecommunications policy and advising
the President on telecommunications matters. The NTIA's latest
report is a follow-on to an NTIA study released in March 1995 (see
QST, June 1995, page 75).

The Options report addresses spectrum availability and long-range
planning options for services that were identified in the earlier
report as needing additional HF spectrum--including Amateur Radio.
The report cites a potential 900 kHz or so of expanded or upgraded
allocations for Amateur Radio in the HF spectrum, including:

+ an exclusive, worldwide allocation at 3500 to 3800 kHz
+ a new band at 4945 to 4995 kHz (additional technical studies would
be required)
+ an ''aligned worldwide'' allocation at 6900 to 7200 kHz
+ expanded worldwide, primary allocations at 10100 to 10350 and
14000 to 14400 kHz
+ expanded allocations at 18068 to 18318, 24740-24890, and 28000 to
30000 kHz.

Some of the potential expansions proposed for amateurs and
broadcasting are mutually exclusive or could involve sharing by the
two services. These include the potential expansions at 30, 20 and
17 meters. According to the report, ham radio allocations account
for 13.1 percent of the HF spectrum (3 to 30 Mhz). ''There are no
current plans to auction any HF spectrum,'' the NTIA report states,
but notes that additional allocations for ham radio would come at

the expense of other services--primarily fixed, fixed-mobile and broadcasting. ''The expansion and upgrading of amateur allocations in the 10 MHz, 14 MHz, 18 MHz, and 24 MHz (bands) appear acceptable; however, this will depend on future decrease of requirements for the aeronautical mobile (R) or the fixed services internationally,'' the report said. Changes in the 80 and 40-meter bands ''will require the inclusion of these proposals in US preparations for future WRCs,'' the report added. A requested allocation at 6900-7200 would serve ''to reduce inter-regional sharing and interference from HF broadcasting in the 7100-7300 kHz band,'' the report said. The report called the requested upgraded allocation at 3500 to 3800 kHz ''a good candidate for a common worldwide exclusive amateur allocation at the 3.5 MHz band.''

To help satisfy demand for additional HF spectrum access, the report suggests more efficient use of current allocations, moving current HF spectrum users to other portions of the HF spectrum, use of other non-spectrum technologies and use of higher frequencies. The report also said sharing--and removal of some ''exclusive'' allocations--might be another option.

Calling ham radio ''the oldest radio service'' and one that ''pre-dates regulation,'' the NTIA report casts the hobby in a favorable light. ''Radio amateurs have made significant contributions to the field of radio propagation, HF single-sideband radio, HF data communications systems, packet radio protocols and communications satellite design.'' The report goes on to say that ham radio ''continues to play an important role in disaster-relief communications, where amateurs provide radiocommunications independent of the telephone network or other radio services.''

I'm a HAM, and a big-time cell-phone user(for business use), and if I was going to report a HORRID accident... And I had the choice between calling cellular-911(and waiting 20 seconds for the call to be answered - at most), or keying up on a police frequency(assuming the channel was PRE-SET, offset, PL encode, etc).. I would always pick the cellphone..

Why?
1) It's legal to use 911
2) You don't have to provide a REALLY good excuse to avoid loosing a ham license
3) The Police are VERY good at taking 911 calls, entering them into the computer, and the dispatcher relays them..
-- If I tuned my rig to 155.595mhz(Virgina State Police), with proper offset and PL, and announced an accident... It would be like someone on a 2-meter repeater breaking in and saying "BREAKER 19, BREAKER 19, any coon-dogs out thar yonder" --

Also the antagonists are safetly separated by distance. Although local VHF bands also have consistent propagation: local ground wave and repeaters, you hear less of the threats and personal controversy because the proponents are in physical assault and property damage range.

I just took and passed my tech-PLUS (yes I believe code should be required and I practice what I preach :-)....) and should have my call sign any day now.
I have an Alinco DJ191TH handie talkie VHF because it's all I can afford right now. (I am also sleeping with it since I can't use it yet!) .-)... I am saving for a YAESU FT847. (meanwhile I can use my best buddy's HF rig to keep CW sharp). Does anyone have any knowledge or experience with this unit before I spend $1759.00 + power supply and antennas for one?? My VEC recommended it and it is "all band" to 70cm, thus eliminating need for multiple radios. But why so "cheap" compared to some HF to 30MHz ONLY rigs that are well above 3 and 4000.00?? I am guessing that the 4000.00 HF only rigs are just a way for someone to dispose of cash rather than flushing it down the toilet seeing as my Extra buddy used to DX with a wire and a low wattage heathkit!! (or so he says :-)...)
Any help for this new ham would be appreciated....AND YES IF ANYONE THINKS I DON'T EVEN NEED TO SPEND 1750.00 ..PLEASE LET ME KNOW! I really don't care about bells and whistles...I just thought the frequency range would give me more flexibiliy for the money....THX!

HI,

I have fitted the FL 223 narrow filter in the IC 746. I am not happy with the carrier insertion point on narrow USB: Is this adjustable?

The frequency response on receive is as follows:-

USB Wide 270Hz - 2800Hz
LSB Wide 200Hz - 2720Hz

Acceptable - but the LSB could perhaps be moved up a fraction. Which trimmer/coil do I adjust?

USB Narrow 690Hz - 2680Hz
LSB Narrow 320Hz - 2310Hz

LSB acceptable but USB attenuating lower frequencies too much. Can be improved of course by using PBT (IF shift) but would prefer to adjust the appropriate trimmer if there is one.

If you can help with this it will be much appreciated.

Regards

Dave G4EZK

Intentional QRM is unacceptable, no matter who is doing it. But I have to ask, did RB monitor 7255 to see if a QSO was taking place prior to them firing up their xmtr, or did they begin transmitting on top of the fellows you taped?

With music and conversation in AM, I imagine those hams didn't remain on 7255 SSB very long - a QSO would have been practically impossible.

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <696>

USFA Encourages Families to Develop and Practice Home Escape Plans
1998 Fire Prevention Week, October 4-10

Washington October 1, 1998 - The United States Fire Administration (USFA), a directorate of the Federal Emergency Management Agency, encourages the public to support the 1998 Fire Prevention Week, October 4-10, by practicing and planning a home escape plan.

"Taking the time to develop and practice a home escape plan can ensure your family's safety and survival when dealing with a fire," said U.S.

Fire Administrator Carrye B. Brown.

According to officials at the USFA, practicing a home escape plan begins by first installing smoke alarms on every level of the home. Test smoke alarms monthly, and replace the batteries in smoke alarms with fresh batteries at least once a year. When a fire breaks out, a working smoke alarm, functioning as an early-warning system, reduces the risk of dying by nearly 50 percent.

The USFA recommends following the outlined escape planning safety tips:

* Make sure everyone in your family knows and practices escape routes from every room in your home.

* Remember to escape first, know how to notify the fire department, and when to call for help.

* Never open doors that are hot to the touch.

* Teach your family to stop, drop to the ground and roll if their clothes catch fire.

* Designate a meeting place outside. Try to make it a location away from your home, but not necessarily across the street.

* Teach your family to never re-enter a burning building.

"National Fire Prevention Week is an opportunity for the nation to remember the importance of fire safety," said Brown. "Keep fire safety in mind throughout the year."

Bay Area Red Cross Chapter Aids in Hurricane Relief

The American Red Cross Santa Clara Valley Chapter has dispatched six volunteer disaster relief workers to areas along the Gulf Coast that have been affected by Hurricane Georges. Red Cross spokeswoman Suzy McKee said the chapter probably will send more volunteers by the end of the week, as flooding resulting from the hurricane is expected to increase in severity. McKee said Hurricane Georges has hit Puerto Rico and the Dominican Republic the hardest. The Red Cross counts 84,455 damaged or destroyed family dwellings in Puerto Rico, with only 34 percent of the damage assessment completed.

Contributions to the Red Cross disaster relief fund can be sent
to the Santa Clara Valley Chapter of the Red Cross, 2731 N. First St.,
San Jose CA, 95134.

Those wishing to contribute can also call (800) HELP-NOW

EMC152 Keeping up with Disaster Communication Technology ^&#65533;
Part 1 of 3
10/5/98 For immediate release

The ACS program in California has, for a number of years, advocated
using volunteers in roles other than point to point communications.
With the advent of digital technology in the emergency services
environment, a volunteer having the ability to manage several different
types of communications technology as never been more important.
With a view from southern Florida, here is Joel Kandel, KI4T:

^&#65533;Keeping up with Disaster Communication Technology' -- Part 1 of 3

Joel Kandel KI4T
ARRL Technical Coordinator, Southern Florida

Reprinted from QST Magazine, October 1998, with
permission from the author.

^�More than at any time in the history of technological development, the world is witnessing the emergence and proliferation of new communication aides and media. The Amateur Radio Service can consider itself threatened by this development for two reasons: Many of the proponents of the new media are after our spectrum, and we must keep justifying the need for the Amateur Radio Service, a justification that will become more difficult over time.

^�Second, much of the new technology is user-friendly and efficient. It adds fuel to the fire for questioning the usefulness of Amateur Radio as a national disaster response resource. Will the FCC continue to support our service and our spectrum when a global Internet service can handle greater volumes of messages with enough technological redundancy to allow rerouting of e-mail with segments of the system destroyed by disaster?

^�In the next few years, at least three new satellite services will come on line, providing voice, fax, data (Internet), video, and radio determination services to portable hand-held phones and palm- top terminals--with little or no terrestrial infrastructure to be damaged in a disaster. We may have sewn the seeds of our own obsolescence by giving the world Low Earth Orbiting (LEO) Satellite technology--a technology that the world laughed at originally, and considered useless for commercial purposes. Now the telecommunications industry is putting LEOs to use in systems that will outstrip any applications that hams have been able to accomplish with the OSCARs. While we struggle over long years to develop and launch a single satellite, Motorola and associates have been launching 66 for the I RIDIUM satellite system. The system may be operational by the time you read this issue of QST. It will be accessible for world-wide communications by portable cell-phone-like instruments and pagers. Two competing satellite systems will be on-line within a yearthereafter, no doubt driving down costs to the point where satellite cell-phones will be affordable to the masses.'

Mike,

I don't do the nets for that reason, but some people enjoy that kind of thing so why should I "knock" it? I also enjoy contesting and some dxing in addition to ragchewing on CW--I don't really care what other people think about it since I'm still having fun.....

Why would any coherent man or woman choose to refer to themselves as "Stumpjumpers"? The term itself as is defined by modern definition is derogatory. The mental image that this term inspires is that of an ill-educated, backwoods offspring of a pair of first cousins. When one forms a mental image of a "Stumpjumper', one immediately thinks of the banjo playing, mentally challenged and UGLY kid in the Deliverance movie of several years back. Remember him? The kid with the crossed eyes and the misformed head? With this in mind, one thing can be said for StumpJumpers...they never have to look too far up the family tree to figure out who their parents were....and better yet, they all have the same last names!

Hello Everyone...

A couple of weeks ago, I sent out a survey to list only Amateur Radio BBS systems. I also received many messages requesting the results. However, I have yet to receive any data as to the existance a BBS system. Could this mean that all the stand alone BBS systems are gone now?

Best Wishes,

While I to believe that Gdfthr768 could be a good ham, and invite him to
go for it...

... why are we failing to comment on his current illegal operation?

Just curious.

Looking for instructions to modify TS-440S for extended TX and RX.
I need this coverage for driving transverters

can anyone point me to a site or email me the instructions?

I have tried QRZ Radio Mods with no luck.

thanks

I must say that I agree in large part if not wholly with your view of ham radio as it now exists (?)! I held a license back in the sixties and when I got married in '66 I became inactive and allowed my license to expire. Recently, I thought I might get back into it and so borrowed a receiver to monitor the bands for activity. I couldn't believe what I was hearing. What happened to the ham code of conduct, ethics, morals et al? It seems that the ham bands have become nothing but a playground for CB dropouts! Obviously, these nuts have no self-respect and thus can't respect anyone or anything else. How sad it is to see such a great American institution go down to this level! Take care!

It sounds like you have lost interest, not that ham radio is dead. It is a fun hobby that I enjoy. Just because you have grown older and don't have anything in common with the people on air, to 'chew the rag' with, does not mean that the hobby has changed all that much.
People have changed. But, as in every part of our society nowadays, you will have people that need to get a clue.

The hobby is much, much more than the content of a conversation. Much more than making a few contacts on ham bands. Use your many years of knowledge to get involved with local youth groups. Get them interested in ham radio. Teach them the values that you imply that you have.
Then I am sure that you will find much more enjoyment in seeing the yearning for knowledge that youth possesses, then in talking 2 hours about how the lack of having to know code has changed ham radio.

My point is get involved with ham radio, get involved with your your local community. You have to set a good example for people, not just give up.

I have a Kenwood TS-50s that I'm having a problem with. It transmits fine, but when I try to receive the receiver is .3 kHz off frequency. It's not even noticable on AM, but it sure is on sideband. Do any of you TS-50s owners out there know of any way to fix this problem? Is there any internal way to fix it myself or will I need to send it off for repairs? Thanks for the help.

I have the following radios for sale. All in good condition and working order.
****

6 Yaesu FTH-7008 UHF handheld radios. Multi-channel with scan function.
(new $679.00 each) Comes with 12 Batteries 1 Yaesu 6 station bank charger
#NC-33 and programming kit for PC programming.

$1400.00 complete.

****
5 Uniden SPU416K UHF handheld radios. Multi-channel with scan function.
Comes with 12 batteries, 1 rapid charger and 6 desk chargers.

$400.00 complete.

****

5 Realistic PRS100 handheld radios. 2 channel. Comes with 12 batteries
and 5 wall chargers.

$250.00 complete

Please contact me via email or at the number below for additional information.

No help maybe but the FL223 in the 706 mkII produces the same problem -
solved by rotating the IF shift clockwise 1 "dot"

There's no electronic adjustment as far as I know - you could always put
a resistor in series with the pot to reset it to centre again - assuming
the circuitry in the 746 is similar.

You don't need to hold an individual licence (ok, license for you US
types!) for a cellular phone! The network company holds a single licence
covering all users of the system. At least that's the way it works in
the UK.

417. The death of ham radio

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-08 00:00:00 UTC
From: burt@imfamous.com
Message-ID: <6vh2qq$h3s$1@nnrp1.dejanews.com>
Source record: 160578

Amateur Radio died back in 1989. We really need to put the putrid
body in the ground and move on to other interests!
Step back from the computer for a moment and reflect on this...
We now have available to us the best radio technology in history.
Just look at the recent offerings from the Japanese companies.
Yet...the fun is gone. I used to own the 1000MP and would look at it
sitting on my desk and I would try to feel good about the purchase and
all the bells and whistles of this feature-bloated rig. Yet, after a
few contacts on the ham bands, I realised that the thrill was gone. I
used to have more fun with my old HW-32!! After a few contacts using
the 1000MP, I realized that I no longer had anything in common with
the people whose voices came to me over the speaker of the Yaesu rig.
I've been a ham since 1968 and I got my extra in 1975. When I got my
extra-class ticket I really, truely believed that ham radio would be
an interesting hobby for the entirety of my life. I was wrong! Ham
radio is NOT the same as it was back then. As a result, I eventually
sold ALL of my ham gear [with the exception of a few collectible
items] and have moved on to other interests. I monitor this
newsgroup for two reasons: a morbid interest in a hobby that is no
more AND a disbelieve that there are so many low life, moronic
rednecks who hold amateur radio tickets today. In regard to those
individuals, a report of their agonizing death in a fiery interstate
car-truck crash would not be received as bad news on this end of the
line. I'm not sure whether they are the predators who killed ham
radio, or just the jackals that lurk in the shadows waiting for their
share of the kill. I hope they choke on the bones!!
Duwayne Hick [of the Arkansas Hicks]

Subject: QST proves you right, Burt
To: burt@innocent.com

Burt,

I received the April issue of QST in the mail yesterday. I was reading the correspondence on
page 24. One of the letters is titled "Top ten things a ham needs in his/her shack."

Reason #2 reads "A picture of you with your arm lovingly wrapped around your loved one, ie, that
brand new transceiver!"

It pretty much emphasizes your point of where hams place their priorities.

Hello, I've searched high and low, and can't find an AEA Radio Link. It's been discontinued for about 2 years. That's the name of this unit that can control an HF rig remotely, by a 2 meter handheld. You will have an instant customer if you've got one for sale at a reasonable price. Please make sure the owners manual is available. It would be impossible to program the computer port without it! Contact Orlin KO6PX at 909-517-1107, or email orlin@calserve.com . Thanks, and 73's,

421. Who was playing the "20 minute workout" on 14.313??

Yes, Now that I put my SW radio in My bedroom, I use it to help me sleep during the day. I set it to 14.313 and get to listen to some good stuff, I woke up this afternoon to the voice of a woman going "up 1, down 2" etc like a excercise video.

Who says "Lying Showers" all the time too....

Enjoy the "Most Exciting Frequrncies" on 20 Meters!!!! 14.300 and 14.313!!!!

CB Rambo sez: "HAW HAW HAW!!!"

Not sure, Lloyd. I'm at work during the day and don't get a chance to hear 14.313, a/k/a "The Daytime Zoo of Amateur Radio." But if I had to venture a guess, I'd say it's probably the same party who "treats" us to "Anchors Aweigh!" and constant references to "Them East Coast Faggots!"

Ham radio at it's best...for all the world to hear.

"Where's that big 'ol CB RAMBO??"

429. Re: YAESU FT847 ADVICE

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-08 00:00:00 UTC
From: Keith Reynolds <#1keith@toolcity.net>
Message-ID: <6vhjg7lvs1@news.toolcity.net>
Source record: 160590

Hi Bob,

I have one of the FT-847s and think it's a great rig for the money. I don't use the HF on it but it's there if I need it. I have a couple of FT-1000D rigs I use for HF so I only use the 847 for 6 meters, 2 meters and 440. I plan to take it with me on my next trip out west as a portable rig. When I bought the rig I compared it to the new Icom and the Yaesu had a much better receiver on it. There is no auto antenna tuner built in so that's something to think about. The Icom has one but you can't go wrong with the old saying....you can't work them if you can't hear them...and the 847 "hears" them better than the Icom.

Good luck and 73,
Keith - n3uux

BassMasterson_@webtv.net wrote in message
<2122-361C390E-95@newsd-134.iap.bryant.webtv.net>...
I just took and passed my tech-PLUS (yes I believe code should be required and I practice what I preach :-)....) and should have my call sign any day now.
I have an Alinco DJ191TH handie talkie VHF because it's all I can afford right now. (I am also sleeping with it since I can't use it yet!) .-)... I am saving for a YAESU FT847. (meanwhile I can use my best buddy's HF rig to keep CW sharp). Does anyone have any knowledge or experience with this unit before I spend $1759.00 + power supply and antennas for one?? My VEC recommended it and it is "all band" to 70cm, thus eliminating need for multiple radios. But why so "cheap" compared to some HF to 30MHz ONLY rigs that are well above 3 and 4000.00?? I am guessing that the 4000.00 HF only rigs are just a way for someone to dispose of cash rather than flushing it down the toilet seeing as my Extra buddy used to DX with a wire and a low wattage heathkit!! (or so he says :-)...)
Any help for this new ham would be appreciated....AND YES IF ANYONE THINKS I DON'T EVEN NEED TO SPEND 1750.00 ..PLEASE LET ME KNOW! I really don't care about bells and whistles...I just thought the frequency range would give me more flexibiliy for the money....THX!
73
Big Bad Bob Bass (call pending...)

I do not have a licence (never have), but I was concidering getting
one. However, after reading this, it started to make me wonder
whether it would be worth the effort. I refuse to believe that
everyone on ham radio is a low-life moronic redneck as is the case on
CB. Maybe it's just the 2M band you're talking about? Since anyone
can get a licence without knowing morse code, I suggest people who
want to hang with the elites learn the code and use it. It seems that
there would be less morons on the MF/HF bands, and especially on CW.
And hell, on CW, you can't tell if they are rednecks or not unless
they talk about marrying farm animals or something.

Also, I believe people who have lost interest should build their own receivers/transmitters (or even tranceivers) rather than buying a new, state-of-the-art rig. It seems to me that contacts made with a home-built rig would be much more fun than with its modern counterpart. After all, anyone can buy a radio, but only a few can actually build one.

Any comments?

Shawn

I've just acquired a Meguro MSA 4902 Spectrum Analyser which goes up to
1GHz.

It works fine but I need a book for it just in case.

Can anyone suggest where I might get one or can I borrow one to copy?

Regards

Yes, just as I see the changes in Burt, I see the changes in
amateur radio. "The only thing certain is change", they say,
and like Burt I miss the old days of a wobbly VFO and the J-38.
But I'm still interested in Ham Radio, only in a different way.
Instead of wandering around in crowded HF bands I'm up above
50 Mhz in the weak signal portions nowadays.
Ironically, I'm sharing space and priviledges with the Technician
class operators, which pleases me to no end!
I have always viewed Amateur Radio as an experimenter's playground.
To this end I still see new horizons. While the satellite scene
is currently cooling down, I'm now considering EME. Various
radio propagation modes are related to other interests such as
astronomy. Recently I posted here asking, 'Why no aurora activity
reports?'. Well, the people that spend their time complaining
about the state of things are not on the radio and experimenting,
that's why. Don't ever take this newsgroup or any other cyberspace
activity as a reflection of the real world.
Its in a separate universe of its own. See Dan Simmon's book

From Tad Cook, K7VVV
Seattle, WA October 9, 1998
To all radio amateurs

SB PROP ARL ARLP041
ARLP041 Propagation de K7VVV

Solar activity was down again last week, with the average sunspot number off by almost 54 points and the average solar flux down by nine points. Average solar flux for the previous 90 days was 129, and flux values were well below this number on every day. The active geomagnetic days were last Thursday, Friday and the following Wednesday, when the planetary A index was 20 or more.

For the next few days expect a slightly higher solar flux, with flux values on Friday, Saturday and Sunday predicted to be 135, 130 and 130. Solar flux should drop down below 125 until October 15, when it should begin to rise again, peaking around 140 from October 18 to 20, then dropping below 130 after October 23. Solar flux is expected to drop below 120 after October 26, then begin to rise around the end of the month. Expect unsettled conditions this Sunday, with a predicted planetary A index of 18, and again around October 15 and 24 due to coronal holes.

WA5IYX in Texas reported that possibly the highest MUFs so far in cycle 23 occurred on October 7. He said that this was largely a seasonal effect, and that commercial low band 2-way radio transmissions around 33 and 37 Mhz were coming in strong from the east coast.

This Fall is the season when we are starting to see 10 meter openings, and this Saturday there is a 10 meter sprint sponsored by Ten-Ten International where this band may show its stuff. It certainly helps to be at a lower latitude, as WA5IYX is. From the author's QTH in Seattle, a path projection to New York City run on a popular propagation program shows a slight chance of a 10 meter opening from 1800z to 2030z with a solar flux of 130. The MUF over that time varies from 21.8 to 22.8 Mhz. Run the same numbers from Los Angeles to Atlanta, and the opening stretches from 1400z to

0200z, and a period of excellent propagation from 1630z to 2200z, with MUF as high as 35.2 MHz. The southern path is about 500 miles shorter, but similar numbers are revealed when calculating a shorter northern path as well.

Sunspot Numbers for October 1 through 7 were 47, 51, 38, 21, 49, 68 and 98 with a mean of 53.1. 10.7 cm flux was 118.8, 112.7, 111.9, 114.8, 117.1, 117 and 124.2, with a mean of 116.6, and estimated planetary A indices were 21, 21, 14, 5, 7, 6 and 20, with a mean of 13.4.

438. Will U.S. join CEPT???

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-09 00:00:00 UTC
From: valerie65@my-dejanews.com
Message-ID: <6vlmf5$7lt$1@nnrp1.dejanews.com>
Source record: 160450

Anyone with any prognosis as to when the U.S. will formally join CEPT, so that American hams can use their rigs in Europe without hassle? Once source says this "just around the corner," another tells me, "don't hold your breath."
Any ideas?

We are less than 30 days away from the Odessa Texas 15th Annual Hamfest!

If you haven't been here, don't miss this year! Lots of prizes, hidden transmitter hunts, lots of door prizes, lots of fun. We fill 21,600sq ft of space with over 200 tables of vendors & hams. Yes, we are not the largest fest around.... But, we like to think it's a fun and great fest. Ask any of the dealers that have been attending for years.
Texas Bugcatcher
The Ham Store (KCOMM)
WB0W
Rad-Com Radio
and many more...

This year is the first year we have had online & secure registration. No, you do not need to attend to be eligible for the major prize drawings on Sunday. And, any unclaimed registrations are put into the hopper prior to the major drawings on Sunday. Hey! Come check out the Sunday Lunch/BBQ!
Prizes include:
Alinco DX-70T
ICOM 2710
ICOM T7A
ICOM T2A
ICOM T2A (yes, two of them)
ALINCO C1T (2 of them)
ALINCO C4T (2 of them)
COMET GP-6
And...possibly a full computer w/monitor...still working on this prize.

Check out our webpage at: http://nonprofit.apex2000.net/hamfest/

FCC FINES FLORIDA HAM IN INTERFERENCE CASE

The FCC has levied a $2500 fine on a Florida ham for malicious
interference on a business radio service frequency. Jeffrey G. Guss,
KF4MWT, of Palm Bay, Florida, was cited by the Commission following an
investigation of several months that also involved malicious
interference to an amateur repeater.

In February 1997, the FCC's Tampa office responded to complaints of
unauthorized transmissions containing foul language and threats on 154.6
MHz. Agents tracked the transmissions to Guss's residence, but he denied
having equipment that could transmit on 154.6 MHz. The FCC sent Guss a
warning letter regarding the unlicensed 154.6 MHz operation that had
```

been traced to his residence, but he failed to reply as required.

Later that year, the Tampa office responded to complaints of malicious interference to an amateur repeater. Using DF gear, agents tracked the transmissions to a mobile source and ultimately spotted Guss riding in the bed of a pick-up truck. Guss denied knowledge of the transmissions on the amateur repeater, but when agents asked to inspect his amateur station, they found a hand-held transceiver that transmitted on 154.6 MHz. They also spotted what appeared to be an RF amplifier inside a vehicle Guss owns, but he refused permission to inspect it.

An Official Notice of Violation went out last September, but Guss again failed to reply as required. Last February, the Tampa office issued a Notice of Apparent Liability to Guss for unlicensed operation on 154.6 MHz, for failing to permit inspection of radio equipment in his van, and for failing to respond to the FCC's correspondence.

An FCC review upheld the initial findings in the case. On October 7, the FCC ordered Guss to pay the $2500 fine within 30 days. There is no indication in the order that Guss's amateur ticket or the Land Mobile Radio Service license he holds will be jeopardized, however.

HAMS HELP NAB POLICE RADIO JAMMER

A Connecticut Amateur Radio tracking team called Capitol Region Malicious Interference Tracking (CRMIT--pronounced "Kermit") helped lead authorities to a man they believe was interfering with local public safety communications. Wethersfield, Connecticut, police arrested Joel Langdo of Hartford September 29. He's been charged with criminal mischief, interfering with police and breach of peace. Langdo also could face similar charges in other communities as well as federal charges.

Langdo, a security guard who does not hold an amateur license, allegedly used a modified ham radio hand-held to transmit on police and fire frequencies used by as many as three dozen Connecticut public safety agencies. At one point, he is said to have jammed the Manchester, Connecticut, police system for 15 minutes.

Tracking down Langdo took several months of often grueling detective work and careful documentation of offending transmissions, according to CRMIT spokesman Bruce Marcus, WA1NXG, an ARRL Life Member who's in the land-mobile business. Last April, Manchester Police solicited help from CRMIT, which, in turn notified the FCC. CRMIT helped Manchester authorities solve another malicious interference case several years ago.

Marcus said the jammer used a modified Yaesu FT-50R dualband hand-held for all of his escapades, which included playing music, airing sound from TV sitcoms, making moaning sounds, and recording and playing back police transmissions. Because the complaints were widespread, Marcus said it was not clear at first that the jamming incidents were related. "We put the puzzle together," he said. The CRMIT team used sophisticated transmitter fingerprinting equipment, and the offender helped to capture himself, Marcus said. "Its unique signature nailed it." The offender

also had a habit of broadcasting Tchaikovsky's Nutcracker Suite and certain DTMF strings.

The CRMIT team eventually was able to track transmissions to the building where Langdo lived. Marcus said federal authorities are looking into how Langdo got the radio illegally modified to transmit outside the amateur bands.

Marcus had some advice for hams who want to get involved in tracking down perpetrators of malicious interference. "The object is diligence and cooperation from fellow hams to get the bearings and identification of those signals," he said. "You have to work at it. You have to work at it, and it takes the cooperation of many people."

DELAYED SPACE STATION SCHEDULE POSTPONES ARISS

Delays in the start of construction for the International Space Station will postpone the permanent presence of ham radio in space. After meeting with a NASA delegation late last week, the Russian Space Agency rescheduled the launch of the first crew to early next year. Originally set for launch next summer, the first crew now will go into space in January 2000. "So, you won't have an Amateur Radio signal coming out of the ISS until then," said NASA's SAREX Principal Investigator Matt Bordelon, KC5BTL.

The first crew will consist of US astronaut William M. Shepherd, as the expedition commander. Shepherd is studying for his ham ticket. Accompanying him will be Russian cosmonauts Yuri Gidzenko and Sergei Krikalev, U5MIR. All three have previous space flight experience. The crew has been training for their launch on a Soyuz vehicle and a planned five-month mission on the ISS.

The change in launch date was blamed on budget-based delays in Russia's completion of the Functional Cargo Block or service module for the ISS. Launch of the service module now is set for next July. The service module is the section of the ISS in which astronauts and cosmonauts will live during construction and will be ham radio's first permanent beach head in space. Russia's financial woes have put its space program well behind the curve in recent months.

At the same meetings between US and Russian space officials last week, Russia agreed to sell its research time aboard the first phase of the ISS and unspecified hardware to the US for $60 million.

The latest delay means that permanent Amateur Radio on the International Space Station (ARISS) equipment will not be on the air until after the Russian service module is in space and occupied. However, Amateur Radio has been manifested aboard the ISS as "necessary crew equipment."

Once aboard the ISS, ham radio, through the SAREX program, will serve as an educational tool through worldwide school contacts and as an outreach to the general public.

SCHOOLS IN FOUR STATES ON NEXT SAREX QSO SCHEDULE

Schools in Indiana, Rhode Island, Texas, and Virginia are on the schedule to make Amateur Radio contact with the astronauts aboard the space shuttle Columbia next year as part of the Space Amateur Radio EXperiment, or SAREX, program. The four-day flight, mission STS-93, is tentatively set for launch January 21.

Hams aboard STS-93 are Commander Eileen Collins, KD5EDS, Michel Tognini, KD5EJZ, and Catherine Coleman, KC5ZTH. Other crew members are Jeffrey Ashby and Steven Hawley.

If all goes as planned, students at each school will get a chance to directly interview the astronauts via a ham radio linkup. Typical passes last approximately 10 minutes. Specific times and dates of the school contacts have not yet been arranged.

For more information on the SAREX program, contact Jean Wolfgang, WB3IOS, e-mail jwolfgang@arrl.org.

IARU ADMINISTRATIVE COUNCIL MEETS IN VENEZUELA

The International Amateur Radio Union Administrative Council says it favors no reduction in the minimum international qualifications for a license to operate an Amateur Radio station. At the same time, the Council said it preferred to state the technical and operational qualifications for an amateur license "in a mandatory Recommendation rather than in the Radio Regulations themselves."

The Council expressed its viewpoint in the wake of its meeting in Porlamar, Venezuela, October 3-5 following the IARU Region 2 Conference. At the session, the Council accepted a fourth and final report of the Future of the Amateur Service Committee (FASC). The report took into account recommendations of the previous three regional conferences and adopted guiding principles for possible revision of Article S25 of the International Radio Regulations. Among other provisions, Article S25 says that Amateur Radio license applicants shall demonstrate the ability "to send correctly by hand and to receive correctly by ear, texts in Morse code signals" for operation below 30 MHz.

The Council asked the FASC to continue to develop a draft Recommendation for Council consideration. As proposed, Article S25 would reference specific Recommendations, including the Morse code qualification.

"Amateurs on both sides of the Morse code issue should support moving the qualifications for a license into a Recommendation," said ARRL Executive Vice President David Sumner, K1ZZ. "Recommendations can be reviewed and revised more regularly than the Radio Regulations themselves. At the same time, service representatives have a greater opportunity for input into a Recommendation."

In other business, the Council received the nominations of current IARU Secretary Larry Price, W4RA, for IARU President, and David Wardlaw, VK3ADW, for IARU Vice President for five-year terms starting next May 9.

The Council unanimously recommended ratification of the nominations by member societies. The current IARU President is Richard Baldwin, W1RU. Current IARU Vice President Michael Owen, VK3KI, had already declined nomination for another term.

The Council also reviewed the implications of the postponement of the next World Radiocommunication Conference until the year 2000, and the deletion of certain items from the conference agenda by the ITU Council. While this WRC will be held somewhat later than originally expected, the Council said preparations for it and the subsequent WRC in 2002 or 2003 are ongoing, and IARU participation--in the preparatory meetings as well as the conference itself--remains essential.

The Council also accepted the report of the Amateur Radio Outlook Committee and discharged the panel. The Committee was to make general recommendations on the future growth and development of Amateur Radio in light of the Internet and other telecommunications developments. But the Committee reported difficulty soliciting input from the amateur community, perhaps because of confusion about the panel's responsibilities. In the same vein, the Council agreed to set up a committee to exchange papers identifying issues facing the Amateur Radio services "in the challenging environment of the new millennium" as part of an effort to review the IARU structure and ensure its long-term viability.

International coordinators and advisors reappointed to new three-year terms included Robert Knowles, ZL1BAD, IARU Monitoring System; Hans van de Groenendaal, ZS5AKV, IARU Satellite Advisor; and Christian Verholt, OZ8CY, IARU EMC Advisor. Robert Fabry, N6EK, was appointed IARU Beacon Project Coordinator replacing John Troster, W6ISQ, who has retired.

The Administrative Council's next meeting will follow the IARU Region 1 Conference next September in Norway. A copy of the official news release from the IARU Administrative Council meeting is available at http://www.iaru.org/rel981005.html.

HAMS SOUGHT TO ASSIST WILDLIFE RESEARCHERS

ARRL Amateur Radio Direction Finding Coordinator Joe Moell, K0OV, says Canadian Wildlife Service biologists again are seeking help from ham operators and monitoring enthusiasts in tracking the migration of the burrowing owl. Up to 40 radio-tagged burrowing owls will be migrating south from Alberta and Saskatchewan through the central United States in the next few weeks. These endangered birds are expected to find winter homes in southern Texas and nearby areas of Mexico. They are considered endangered in some places and "of special concern" in others.

Unlike other owls, burrowing owls don't roost in trees. They prefer to roost in cavities on the ground in treeless grasslands.

If you have a scanner or extended range 2-meter receiver and live in the anticipated migratory path or in the wintering area of the owls, you can assist by listening for the radio tags, which emit pulsed signals near

172 MHz. They have greatest range at night when the birds are in flight. Your help is especially needed if you have portable direction finding equipment.

For more information, visit the K0OV Radio Direction Finding Web site at http://members.aol.com/homingin/ or send e-mail to homingin@aol.com.--Joe Moell, K0OV

APRS, SPREAD SPECTRUM HIGHLIGHT DIGITAL CONFERENCE

If developments displayed at the 17th ARRL and TAPR Digital Communications Conference were any guide, the momentum of the Automatic Position Reporting System (APRS) continues to grow. This year's conference--held September 25-27 in Rolling Meadows, Illinois--was notable for the announcement of a new Kenwood hand-held transceiver that includes a built-in TNC with support for APRS display and messaging as well as monitoring PacketCluster DX spots. The Kenwood TH-D7A "Data Communicator" is a dual-band (144/440 MHz) unit. It's expected to be on the market by year's end.

As it was last year, spread spectrum development again was another prime topic of discussion. One key difference from last year was the presence of real spread-spectrum hardware. A large contingent from the Packet Radio Users Group (PRUG) of Japan showed up with three experimental 2.4-GHz, direct-sequence spread-spectrum PRUG96 stations. This system, which comprises radio and computer components, is being developed in Japan by PRUG. At the conference, the three units were operated as a network transferring data among themselves at about 800 kbit/s.

Another spread-spectrum radio development project is the TAPR effort, spearheaded by Tom McDermott, N5EG. McDermott reported at the Conference that the project has moved considerably forward, with much of the development of the digital hardware and the software kernel now completed. A lot of work remains to be done, however, and no specific project completion date is yet forecast.

Dewayne Hendricks, WA8DZP, reported on experimental Amateur Radio spread-spectrum networks (under TAPR's FCC-granted special authority) in the San Francisco Bay area. One system he has tried uses Part 15 wireless LAN equipment, but operates under amateur (Part 97) rules. Another uses cable modems and transverters.

These technological efforts did not escape the notice of conference keynote speaker Dale N. Hatfield, W0IFO, Chief of the FCC's Office of Engineering and Technology. He expressed pleasure and approval at seeing the kind of experimental work that amateurs are engaged in, calling such efforts vital to the future of Amateur Radio.--Jon Bloom, KE3Z

SOLAR UPDATE

Solar sage Tad Cook, K7VVV Seattle, Washington, reports: Solar activity was down again last week, with the average sunspot number off by almost 54 points and the average solar flux down by 9 points. Average solar

flux for the previous 90 days was 129, and flux values were well below this number on every day. The active geomagnetic days were October 1 and 2 and the following October 7, when the planetary A index was 20 or more.

For the next few days expect a slightly higher solar flux, with flux values on October 9-11 predicted to be 135, 130 and 130. Solar flux should drop down below 125 until October 15, when it should begin to rise again, peaking around 140 from October 18-20, then dropping below 130 after October 23. Solar flux is expected to drop below 120 after October 26, then begin to rise around the end of the month. Expect unsettled conditions October 11, with a predicted planetary A index of 18, and again around October 15 and 24 due to coronal holes.

This fall is the season when we are starting to see 10-meter openings. October 10 is the 10-meter sprint sponsored by Ten-Ten International, so this band may show its stuff. From the author's QTH in Seattle, a path projection to New York City run on a popular propagation program shows a slight chance of a 10-meter opening from 1800 to 2030 UTC with a solar flux of 130. The MUF over that time varies from 21.8 to 22.8 MHz. Run the same numbers from Los Angeles to Atlanta, and the opening stretches from 1400 to 0200 UTC, and a period of excellent propagation from 1630 to 2200 UTC, with MUF as high as 35.2 MHz. The southern path is about 500 miles shorter, but similar numbers are revealed when calculating a shorter northern path as well.

Sunspot numbers for October 1 through 7 were 47, 51, 38, 21, 49, 68, and 98, with a mean of 53.1. The 10.7-cm flux was 118.8, 112.7, 111.9, 114.8, 117.1, 117, and 124.2, with a mean of 116.6. The estimated planetary A indices were 21, 21, 14, 5, 7, 6 and 20, with a mean of 13.4.

IN BRIEF:

* This weekend on the radio: The Ten-Ten Day Sprint is October 10, and the ARRL International EME Competition, the Rhode Island and Pennsylvania QSO Parties, and the VK/ZL/Oceania Contest (CW) all are the weekend of October 10-11. Just ahead: the Jamboree on the Air (JOTA), the JARTS WW RTTY Contest, the QRP ARCI Fall QSO Party (CW), the Illinois QSO Party, the RSGB 21/28 MHz Contest (CW), and the YLRL YL Anniversary Contest (SSB) are October 17-18. The CQ WW DX Contest (SSB) is October 24-25. See October QST, page 108, for details.

* Vanity update: The FCC is catching up a bit on vanity call sign processing. The FCC in Gettysburg reports that on October 5, it processed vanity applications received through September 17, including all work in process (WIPs). In the last processing run, 362 vanity applications were granted and 324 hit WIPs. The larger than average number of applications likely reflects the reduction in the vanity call sign fee, from $50 to $13, effective September 14.

* 1998 Field Day results: The results of the 1998 Field Day will appear in the December 1998 issue of QST. Field Day results typically have appeared in the November issue, which, this year, carries instead the updated and corrected results of the 1997 ARRL 10-Meter Contest. This November's issue does includes several photographs from this year's Field Day event, submitted by numerous participants.

* Call for papers: The ARRL seeks articles for the next volume of the very popular The ARRL Antenna Compendium series. An article should be previously unpublished and should deal with antennas, transmission lines, or propagation. Submit articles (or solid ideas for possible articles) to Dean Straw, N6BV, ARRL, 225 Main St, Newington, CT 06111 or via e-mail to n6bv@arrl.org.

* TMSAT-1 not yet ready for ham use: Chris Jackson, G7UPN reports that TMSAT-1 commissioning is mostly complete. Testing and calibration of the satellites imaging system was underway. An "anomaly" has been observed involving the downlink transmitter, however. The power periodically drops to less than 1 W. Ground control stations are attempting to determine the cause, and the transmitter is only being operated over the command stations in Bangkok, Thailand, and Surrey, England. "This will probably continue for another few weeks," Jackson said in mid-September." For more information on TMSAT-1, visit http://www.ee.surrey.ac.uk/CSER/UOSAT/missions/tmsat/info/index.html

* Ham radio history reflector: An Ohio ham has started up a free e-mail reflector that focuses on Amateur Radio trivia, history, and recollections. Pete Buehner, KC8ER, of Mentor, Ohio, says he established the electronic forum "to research and preserve as much of our hobby's past as possible." He only asks that hams "share what they know" on the reflector. To subscribe, send a blank e-mail message to ham-radio-history-subscribe@eGroups.com. For more information, contact KC8ER at kc8er@harborcom.net; http://www.members.harborcom.net/~kc8er.

* W1BSA goes shipboard for JOTA: Members of the USS Salem Radio Club will operate W1BSA from the USS Salem during the Boy Scout Jamboree on the Air (JOTA) October 17. Operation will be on the prescribed JOTA frequencies. The USS Salem, a retired heavy cruiser, now is a museum ship in Quincy, Massachusetts. QSLs for W1BSA go via K1RV (include an SASE).--Pi Pugh, K1RV

* NE Volunteer of the Year: William "Bill" Wawrzenziak, W1KKF, of Wallingford, Connecticut, received the New England Division Volunteer of the Year Award August 29 at the ARRL New England Division Convention in Boxboro, Massachusetts. Congratulations, Bill!--Tom Frenaye, K1KI

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit ARRLWeb at http://www.arrl.org.

The purpose of The ARRL Letter is to provide essential news of interest to active amateurs promptly and efficiently, and in advance of publication in our official journal, QST. The ARRL Letter strives to be fast, accurate, concise, and readable.

Material from The ARRL Letter may be reproduced in whole or in part in any form, including photoreproduction and electronic databases. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, ARRL members should visit the League's Members Only Web Site at http://www.arrl.org/members/ and follow the registration instructions. Registration also provides access to The ARRLWeb Extra, a news and feature magazine.

For members and nonmembers alike, The ARRL Letter also is available free of charge from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. NOTE: The ARRL Letter will be posted each Friday as soon as possible after publication.

* The Netcom listserver operated by volunteers from the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list". (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via the Netcom listserver.)

* The HIRAM BBS: 860-594-0306. The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published Fridays). For example, to request The ARRL Letter file for Friday, September 4, 1998, type "send ltr0904.txt". Then, on a separate line, type "quit". The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

444. ARLB084 FCC Denies KV4FZ Petition for Reconsideration

ARLB084 FCC Denies KV4FZ Petition for Reconsideration

ZCZC AG84
QST de W1AW
ARRL Bulletin 84 ARLB084
From ARRL Headquarters
Newington CT October 9, 1998
To all radio amateurs

SB QST ARL ARLB084
ARLB084 FCC Denies KV4FZ Petition for Reconsideration

The KV4FZ legal saga appears headed for the courtroom. The FCC has denied a petition for reconsideration filed by Herbert L. Schoenbohm, KV4FZ. This past summer, the FCC upheld the supplemental initial decision of an administrative law judge denying Schoenbohm's application to renew his Amateur Radio licenses. The latest FCC action on October 6--simply affirms that finding.

The next step is the United States Court of Appeals for the District of Columbia Circuit, which hears all appeals from federal agencies on adjudicatory matters.

ALJ Edward Luton had found that Schoenbohm, of Kingshill, Virgin Islands, had ''engaged in misrepresentation and lacked candor'' in testifying about his 1992 felony telephone toll fraud conviction and his solicitation of ex parte presentations. Schoenbohm was convicted in federal court of fraudulently using a counterfeit access device to obtain long-distance telephone service. The FCC also said he solicited others, using Amateur Radio, to make ex parte presentations on his behalf, in violation of FCC rules. The FCC said his behavior, in combination with his fraud conviction, justified nonrenewal of his ham ticket.

Schoenbohm has been trying to renew his ham ticket for the past four years. He maintains that the FCC should renew his license because his conviction was several years ago, his sentence light, and he's had a spotless record and been fully rehabilitated. The FCC disagreed, however, saying that Schoenbohm ''has not demonstrated that he possesses the basic character traits of truthfulness and reliability that are essential to licenseeship.''

Schoenbohm's license expired in 1995, and his call sign no longer appears in the FCC database. However, he has been allowed to

continue operating as KV4FZ until his administrative and judicial
appeals are exhausted.

>KE6OCM

The US has applied and been accepted for CEPT status. The hold up now
is that the FCC hasn't issued the implementing regulations.

For Sale:
HAL P38 HF MODEM
IN PERFECT CONDITION !!
Buyer pays shipping charges!
$150.00

The P38 is a multi-mode HF data modem that gives you top performance
operation using RTTY, AMTOR, P-MODE*, and CLOVER waveforms. The P38
is a full-sized plug-in card for PC-AT and faster personal computers.
Multi-screen menu-driven HAL software is included with each P38 modem.
Many popular "third-party" user programs are also available for the P38.

The P38 is complete and ready to run. Plug-in the board, connect three
phono cables (not included) to your radio, and install the software -
that's all there is to it!! Whether you want to rag-chew, chase DX, or
contest, the P38 is the modem of choice.

On October 16, 17 and 18 there will be a renewed and expanded hamfest sponsored by the Mount Diablo Amateur Radio Club. It is to be located at the Sheraton Hotel in Concord California. Tickets are $7.00 at the door and well worth the value of numerous forums, a very large swap meet and over a hundred amateur radio equipment vendors.

Also, a VE session will be held on all three days: all elements including code. The sessions are: 6:00pm to 9:00pm on the 16th; 9:00am to 1:00pm on the 17 and 18th.

Oh yes, and there will be a foxhunt and many valuable door prizes. I mean top of the line amateur radios and accessories! Good stuff!

Talk in frequency is 147.060 plus 100pl. See you there!

I've seen copper braid used from frame to each front wheel. The idea is to ground the spindle/bearings to frame to eliminate static buildup. It is possible the spindles are insulated from frame by rubber/grease/etc.

I am probably the only one who had a real live QSO with Masataka since I live about 10 miles from him. It was supposed to be on 80 meters but he couldn't drop a wire from his dorm window so we ended up on a local 2 meter repeater. He is Japanese and am I am French so you can guess how we sounded like, both of us using English as a common language. I can say that Masa is not a bad guy but he does get confused at times. Sometimes, he was so confused that he got me confused as well. I really don't remember what we talked about except that it was very confusing. Hihi. I hope that it helps you understand the guy.

Simple.

It first became apparent when I tried to register with www.qslcard.com
which is a NIFTY new Virtual QSL Card system.

I gave them my e-mail address as
af4k@qsl.net which has always worked just fine for me.
They tried to e-mail me my pass word, but it never came through!

Just for a test, I sent a message to the address myself:
af4k@qsl.net

and it bounced back as undeliverable - no such address.

I wish they would let us leeches know when they are going to drop us!

Yes, their web server is back up and running now.

Thanks to everyone who responded, including the smart arses!

Sounds like a reset w/ new "limits" entry is in order. When theis unit is "expanded", the last step is defining the new band edges...either your programming is corrupted or "prior owner" had odd use for radio. Get a friend to loan you their copy of the ART-SCI series on radio mods, it will tell you how to modify and re-program, it sounds as if the mod is complete, but the band limits are a bit screwy. Good luck w/ gettin' it back on track....<<Rick>>

I can drop a wire now... I don't live in the dorm anymore... but I
don't know if it works well. I can transmit to north or east of
Downtown fairly well but not south or west where majority of signals
usually come in.

```
Fill out below and submit to: CW-Hey-Hey International

========================================

Name : Cyber Weeee (CW)
Address : Central Wyoming
Phone Number : 1-???-CWC-CWCW

When did you get your license ?

1900s ___ 1910s___ 1920s___ 1930s___ 1940s___
1950s___ 1960s___ 1970s___
I don't remember. ___

What do you think about CW requirement ?

___ Kicks the ass out
___ Encourages young people out from ham radio
___ Be superior over other people in public
___ Know code = Know ham
___ It goes when everything else fails
___ Preparation for nuclear wars
___ Preparation for UFOs
___ All of above

What is your suggestion about CW ?

___ Issue or renew license every year at 100 WPM to kick all people
out from ham radio and to lose spectrum
___ No code = No ham
___ Possibility for providing emergency communication by creating CW
transmitters and antennas from scratch, including but not limited to
fallen branches of trees during the ice storm and call CQ CQ CQ...

Your age ?

___ 50s ___ 60s ___ 70s ___ 80s ___ 90s ___ 100s
___ I don't know. All of above.

Note: There will be no license issued for those under 50 years of
age.

Signature : C=-=----W=-=-=-=-=---

Hello all, I am looking for any info you might have a Spectronics Digital
Display DD-1.
I picked it up at a Hamfest as part of a buy (TS-520s) I was told that it
"might not work" but that
it would work with the TS-520s.
Well it doesnt work, at least the counter wont count.

What I need is to know if it will work with the 520s ?
and does any one have a schematic for it ?

thx
Paul

QSL NET is still alive and well. Received information from the
owner/manager (Al) who said they had used a computer program to purge old,
inactive accounts and it accidentally deleted some, if not all, active
accounts. My best suggestion is to resubscribe to the service and get a new
conformation reply. Trying to send e-mail to him about this will not get
the desired results.

HAMFEST October 25, 1998 - Lindenhurst, LI

GREAT SOUTH BAY AMATEUR RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST-COMPUTER SHOW - OCTOBER 25, 1998

LINDENHURST, LI - NY

On October 25, 1998 the Great South Bay Amateur Radio Club will again
sponsor an indoor Hamfest-Computer Show. The location will be at the:

Knights of Columbus
400 South Broadway, Lindenhurst, NY.
This is an ARRL approved Hamfest.

There will be radio equipment, electronic componets, computers and
access-
ories, softeware, books, technical manulas, ARRL information, Amateur
Radio
License Exams, Door Prizes.

Advanced registration is $15.00 each table. Tables at the door are
$20.00
each. Contact Peter Portanova WB2OQQ at 516 541-4886 for table
reserations.
NO TABLES WILL BE RESERVED WITHOUT PRIOR PAYMENT due to the space
available.

General admission is $ 6.00. $5.00 with coupon. (Coupons will be
available
at the door.)

VE - ARRL - 12:00 NOON
For exam candidates please remember to bring your original FCC Amateur
Radio license (if licensed), any C.S.C.E. forms that are pending, plus a
photocopy of each, pens, calculator, formal form of ID (preferably photo
ID),
and the examination fee, to the exam seesion. 1998 ARRL/VEC fee is $
6.35,
exact change is appreciated. Novice exams are free.
The VE team is from ISLIP ARES Group and GSBARC. Thanks guys.

Talk-in will be via GSBARC Repeaters on 146.685 4Z(136.5) PL.

Food Service during the Hamfest will be provided by members of the
Knights
of Columbus Council.

Information is also available during the GSBARC 2 meter info net every Monday evening at 7:00 pm following the Newsline Report on the W2GSB repeater, 146.685 -600 4Z(136.5) PL required. You may also write to:

470. Help on VHF MMIC amplifier selection

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-09 00:00:00 UTC
From: Artur Leung <aleung@ittc.ukans.edu>
Message-ID: <361E1D73.34549EF4@ittc.ukans.edu>
Source record: 160539
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc

Hi,

I am working on a FSK transmitter project using the Motorola MC13176 chip and I need to boast its output power to 500mW, and I need suggestion on a MMIC that will do the job.
Here is the requirement: I would really prefer using one low-cost MMIC rather than going for discrete components because using discrete transistors increases production cost (each circuit has to be tuned -- time consuming). The MMIC has to be low cost, requires the least amount of passive components to support it, and has around 30dB of gain & +27dBm output power at 150-170MHz. Mini-Circuits has some nice MMICs for that frequency range. Although they are low cost, requires only three caps and a choke to operate, and have one that has enough gain, the P(1dB) is only +12dBm.
What do you suggest? I am fairly new to the amateur radio society and do not have a handful of information on component selection. Please advise.

Artur
10.9.98

P.S. Please send me an e-mail copy of your reply if you would like your message to be posted onto the newsgroup. Thanks.

In my long standing tradition of exposing the trash to the world, allow me to introduce a young man (?) who uses the name of "Franky Todd". He has spent the last year jamming with tapes and voice 3901. He is supported by the "Stumpjumper" organization, note his SJ nr 18. Oh yes, he has no amateur call sign. Just thought you all should know about this trash.

yea, spent a summer or two there as a service tech... so many moons ago.

>I was wondering if anybody remembered their
>Dublet or Doblet dipole. It was normally used as an inverted V, I believe
>fed with 450 ohm ladder line and a nice porcilain insulator in the middle.
>Used a Dentron antenna tuner to work 80 thru 10 meters on it

They didn't sell too many of them, look in the handbook circa 1977/78/79 for any Doublet designs, most Dentron products, including amps were basically copies of handbook designs with some modification. I looked in my 'Dentron file' but couldn't find anything. There was nothing unusual or special about that antenna.

>It looks like MFJ might have bought out Dentron

Nope, Dentrons last stand was in about 1983 in a cute little town called Edgerton, OH. They moved there from their original location in Stow, OH. It was placed under the direction of Oren Elliot of All Star Products who were, and still are variable capacitor manufactures. Now called Oren Elliot Products. Dentron filed chapter 11 but were allowed to operate under the direction of this individual who also had a relationship with the same bank who held Dentron. It lasted about 9 months or so and then finally folded, parts, tubes etc were sold off but as far as I know, no one bought any rights or continued to produce any Dentron product under a different name.

This story seems somewhat far fetched, but I'll bite...

1. Were they using the repeater normally e.g xmit on input and listen on
output, if so why not have the repeater operator shut it off? I'm sure they
would have eventually moved.

2. If they were operating simplex on the input why not fire up a couple
hundred watt transmitters point your beam at the airforce base and have a
good ol'e rag chew, southern style?

3. If they were transmitting simplex on the output and was interfearing with
a repeater output, then you need a better repeater!

It seemed that they were operating simplex
as for the control operator he was not in the area at the time so
it was useless to shut it down, and we did try to throw a few 100
at them but it didnt work.
the bottom line is still... they got away with it.
wonder how they feel if a renagade operator.
operated on there sacred bands?
think I could get away with it.
just a though!!! thanks for all the input. 73 all

Rather than chase after them now for the errors of their ways you
might try this. Hook up with one of your larger ham clubs, even an
ARES or RACES group. Go to the base public information office (a good
starting point) and explain the situation and let them know that
rather than have a conflict at the next air show, your group would
like to provide communications support to the show. It is a good
means of keeping in shape with message handling skills, setting up
impromptu operating posts and having operators work with a served

agency. The other plus's are that you can often get good local media pr, early admission as you will be 'staff' and quite often preferred parking. Being that is is a government thing, they might turn you down on some forms of support (flight line, tower ops etc) but you can do wonders for them in coordinating comm needs between the AF coordinators and all the civilian vendors. If nothing else, they will hear your 'complaint' from a helpful side rather than adversarial position. Some of the local groups here in Southern California do this at 'civilian' arishows and we have received the perks of fight line priveledges, being in the control tower, reserved parking and in one case one of our ops got to ride along in a T6 during the show.

Good luck,
Howard KE6MAK

I was in the USAF for 4 years, many of the people that
stayed in long enough to retire were losers who could
not make it the real world, especially enlisted NCOs.

484. What is exactly is Ham Radio

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-10 00:00:00 UTC
From: Theodis.Butler@conchbbs.com
Message-ID: <640_9810101823@conchbbs.com>
Source record: 160404

First off I would like to thank those who took the time and tried to explain what ham radio is but you all were telling ne as if I had some type of knowledge of what it is. I have no idea of what it is. I don't even know if HAM stands for a word or was created by someone who was eating a sandwich and was making a communication device. So can you please explain it to me in 12 year old language. Then we can all be on my level. Like for instance if you wanted to tell me that Ham radio is something to do in spare time - tell me its a hobbie something sort, sweet, and simple (but not too simple I'm not basic you know :+>) Thanks to all the people out their to take the time to explain. Also include why you use it for and what you use it for so I may have an better understanding.

I am posting this message on behalf of a good friend
of mine. He has asked me to see if I can help him find
ANY information about what happened to flight N25626.

His brother (Paul) was the pilot of this aircraft. It
is believed to have come down on the 18th or 19th of
August (there is some dispute over the date) in or near
Cuban airspace/waters. If you would like to read The
National Transportation Safety Board's (NTSB) report
you can find it at -
http://www.ntsb.gov/aviation/atl/98ams1.htm

I am looking for anyone who was monitoring one of the
following ATC's on the 18th or 19th of August 1998,
Cuban ATC, Port-au-Prince ATC in Haiti, or Jamaican ATC
or anyone who may have been tracking or monitoring flight
November 25626.

I am not allowed to give anymore details apart from those
in the NTSB report, but I can say that there has been a
lot of mystery surrounding the fate of flight N25626 and
considering the area in which it went missing my friend is
desperate to find out what has happened to his brother and
his three friends.

If anyone has any information could you please email it
to me rather than post it in the newsgroup. My email address
is valid and does NOT contain any anti-spam measures.

To newsgroup and CC: Al Waller, K3TKJ via e-mail:

I wish to apologize to Al, K3TKJ, who runs www.qsl.net for the obnoxious tone I used in pointing out a problem I was having.

I was frustrated because I couldn't get through to anyone at qsl.net, and the web site wasn't coming up here. I shouldn't have phrased it so rudely.

Sorry, Al! I just missed getting the e-mails!

Apparently the server was down for a while, and the data got reformatted such that the forwarding to me stopped for some time.

In actual fact the site had not disappeared but was apparently suffering from a brief network glitch, maybe not even locally at the server level.

Thank you to everyone who offered help and suggestions, and again, I apologize to Al for any perceived harm by pointing this ouit and asking for help.

Once I figured out how to contact him, he quicky corrected the problem, and correctly chewed me out for the way I presented this to the world.

I recommend qsl.net to anyone who would like an e-mail address on the internet that makes it easy for other hams to find them. Thousands of people have registered with qsl.net and it is a great and important service, which was why I missed it so much!

Recently, I wrote:

I have a serious problem with McGill's administration and I need your immediate assistance.

I am a student in the Chartered Accounting Department at McGill University.

On October 1, 1996, I started working at McGill University's Center for International Management Studies (IMS) to reconcile funds provided by the World Bank to the University.

However, I noticed that McGill's administration had been manipulating the accounts and falsifying the reports. The manipulations amount in the hundreds of thousands of dollars.

When I reported what I saw to the University's Internal Audit and to Professor Bernard Shapiro (McGill's Principal and Vice-Chancellor), the University expelled me from the CA program, claiming that I failed my exams. I wrote excellent exams, but McGill rigged the marking to stop me from reporting what I saw at IMS. Please contact Professor Shapiro at SHAPIRO@UMS1.LAN.MCGILL.CA and ask him why the university rigged my marks.

I tried to settle the matter with the University's Ombudsperson, Mrs. Estelle Hopmeyer and with the Legal Clinic director, Mr. Alex Pless, without success. When I went to see Mr. Pless, the University's security hastily dragged me outside the University. This action is a gross breach of the University's own Charter of Students' Rights which allows me to contact Mr. Pless.

My conflict with McGill's administration reached the University's Board of Governors and Audit and Finance Committee, but nobody listened to me.

I lodged complaints against the chairmen of McGill's Board of Governors and Audit and Finance Committee with Quebec's Order of Chartered Accountants, since the chairmen of the above committees are both CAs. However, I was given a mock hearing at the Order, and the President of the Committee on Discipline ruled, unjustly and unfairly, in favor of McGill's chairmen. You can understand why, can't you? You could confirm the details with Mr. Nicholas Chagnon V.P. Publications.

The lawyers whom I contacted so far are not defending me. I suspect that the Dean of Students Professor Rosalie Jukier is influencing these lawyers not to defend me. Please go to the office of the Dean of Students and ask her why is she stopping my lawyers from defending me.

To silence me, a collaborating judge ruled that I may not contact anybody at McGill. He also ruled that I am not allowed to be on the University's campus, although I did nothing wrong. You must contact me to see my evidence

about the funds manipulations at IMS and to reestablish justice at McGill.

The University sent me to jail although I am innocent of the harassment charge which Dr. Lees is accusing me of. Dr. Lees sent me to Riviere des Prairies Psychiatric Detention Center, alleging that I have been harassing the university's staffs. This is not true, since I was only questioning the staffs about the suspicious funds manipulations.

Now I am out of work, cannot continue my education, and the University is suing me for criminal harassment. The court ordered that I undergo mental evaluation. A conspiring psychiatrist alleged that I suffer from delusional disorder of grandiose type. This is a lie that is intended to silence me. Will you help me report my psychiatrist to the appropriate authorities?

You might want to confirm the above facts with McGill's Secretary-General, Dr. Victoria Lees at: LEES@UMS1.LAN.MCGILL.CA, but I advise you not to, because she will give you false answers.

Other strange events happened, and I will tell it all to you after you contact me. I request that you communicate with the University's reporters, student groups, the students in the CA department and your colleagues to expose the World Bank funds conspiracy at IMS.

This could happen to you or to your friends, so you must help me put an end to McGill's injustices. Also, I need your assistance. My family and I are in a desperate situation because of McGill's emotional and financial pressures. Would you help us in this respect?

Please respond and take action. Thank you for your collaboration.

>Students and ask her why is she stopping my lawyers from defending me.

well... if she has 1 billion in her pocket and pass it to the lawyer
whomever you hire... what happens ? probably you shouldn't think
of lawyers but just to take this university court directly. It [this
university...] is ridiculous. I have enough evidence to win court
battle.

>To silence me, a collaborating judge ruled that I may not contact =

yep. they will do whatever they can do to prevent you from finding
out the evidence. Thanks for your post. I will be using this as
well to kick this university's staffs out of their administrations.

****
I talked with one of the students here and he told me that professor
changed the course outline after the final exam is written. That's
not acceptable. (i.e. changing the final exam weight from 50% to
2/3 of final mark). It is ridiculous. Just keep up posting and
I will post my stories also.
****

Hello , this is VE3QUE & I'm looking for the following in working cond.

Need a 5 wire old Rotor Control box only. Mine is stuck or there's a
transistor shot in the board cause it refuses to position correctly.

The model number here at the present is a SAR-820 , seems it was made around
1977 or so. Anyways , any help would be appreciated , so I could turn my
2 meter beam around .

Just E-Mail me (BH347@Freenet.Carleton.CA)

Thanks from Gerard...73!!

500. The ARRL exposed

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-10 00:00:00 UTC
From: burt@imfamous.com
Message-ID: <6vnhr7sal1@nnrp1.dejanews.com>
Source record: 160477
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

The following are comments by a former high level employee of the ARRL. The organization seems to be "Of by and for the administrator." Additionally there are some
serious concerns that the ARRL is working AGAINST the interests of amateur radio.
This is the opinion of a well respected person. What does the ARRL say? Based on what I have experienced with the ARRL the following is believable. What do you say?

Here are the comments:

As I've already mentioned, life at ARRL HQ was no picnic, although I really did love the work. Your friend and mine, Dave Sumner, turned out to be a very calculating, extremely intelligent and ultimately devastating-to-ham-radio person. And, as understanding of the organization as YOU are, I think you might be taken aback by the things that have happened there in recent years.If you knew about them.I'll throw a couple of hints your way, just to get your blood boiling a bit:1. Do a search in Part 97 regulations for "National Radio Quiet Zone". Do some digging. Don't bother looking in Part 97 for this, but try to figure out what organization benefited from silencing all radio amateurs for 100 miles in all directions of one of the many domestic "offices" of this organization.In the rules, you'll likely find mention of a DIFFERENT organization (The National Radio Astronomy Observatory) which purported to be the ones benefitting. Partially true; they did benefit. But the other, far more sinister organization, is also mentioned, by not by name, in that radio amateurs are required to get approval from BOTH organizations, before attempting to do their FCC-approved transmissions from within the quiet zone.Try to discover why ARRL never lifted an effective finger, nor uttered a sound, to stop the Quiet Zone, since they (ARRL) otherwise purport to be on the side of radio amateurs. Hint: ARRL Ex Director Mendelsohn, ex-President W4RA, and several other present and past paid employees were PURPORTED to have ties to NSA . So was I, in the late 60s, but that's another matter.By the way, the Quiet Zone was actually implemented in 1958. But radio amateurs were not affected until the no-named agency went to the NRA in the early 70s and said "things are too noisy out here in extremely rural West Virginia; we need to shut down all the hams; will you be our cover and get the FCC to get 'em the hell off the air? Please? And don't worry about the hams;they only have one organization looking out for them, and we've got that little problem covered..."Almost 30 years later (last month), I happened upon mention of Microsoft's new"TerraServer" which allows you and I to see, from Russian satellite perspective, levels of detail such that you can see your house nicely and be very confident that it IS your house. By going to their web site, I

pannedover that mountainous, rural, people-less terrain in West Virginia, and lo and behold, there were the two organizations. If you're REALLY curious, go the library and find a book entitled "The Puzzle Palace" by Bamford. In the chapter entitled "Platforms", you'd learn who the organization is and how it is that they can conduct completely illegal electronic spying on your phone calls, made much easier, now that the hams aren't being so pesky. 2. Now that Senator Goldwater has become a silent key, you might want to examine as much documentation as you can about his dealings with the Federal Communications Commission and the ARRL. Ask yourself WHY his bill (Public Law97-259) was deemed to be such a wonderful thing, when in fact it resulted in the following very BAD things for the Amateur Radio Service:A. Zero examining efforts by the FCC / greatly increased income (for the ARRL) by way of the VEC program (yes, I thought that might strike a resonant chord with you...) B. Zero enforcement efforts by the FCC / greatly increased duties by the ARRL. In fact, PL97-259 explicity allowed for the ARRL to form the Amateur Auxiliary to the FCC's Field Operations Bureau, but K1ZZ, W4RA (there he is again, notice any trends?) and Director TurnBull, W3ABC, all made certain that Goldwater's law NEVER allowed for any means of actual enforcement to occur.Of, by and for the radio amateur? Yah. Right.All these years later, it's interesting to see the newsgroup ravings about KV4FZ, WB2OTK and K1MAN. Subsequent to the Goldwater law being enacted, I was tasked with documenting illegalities against those three folks, and I did so quite successfully. K1MAN sued me (and several others at HQ) but on the day that Baxter came to Newington, acting as his own counsel, I was shuffled off to an ARRL convention in either New Mexico or Arizona, I forget which. They did send me to Florida to meet with 'FZ and as for Whitten, I'd already run into him on the Cape and wanted no part of him in person at least, after that.In any event, all these years later, all three are still on the air, having a grand ole time. In any event, Burt, that's the scoop. Oh, one other thing that'll make you smirk, if not outright guffaw. My best friend, who was forced to take MY job, once I was fired, and I, frequently communicate by email. A couple of months ago, I happened upon one of your REALLY excellent W1AW transformations, and decided to forward it along to my buddy. As it turns out, they're under a gag order with regard to email communications (which, come to think of it was the main reason I was fired; I refused to abide by their asinine gag orders) -- and he never responded with so much as a "dih dar dit" about it. Kinda comical, actually.

From: Bill Taylor <btay@bright.net>
Message-ID: <361F48AF.25D0BCCC@bright.net>
Source record: 160478

Kenwood TS-440S/AT All Solid-State
Mode : LSB, USB, CW, AM, FM, FSK
Input Power : LSB, USB, CW,,FM,,FSK 200 Watts PEP
AM 110 Watts AM
General coverage reception 100khz to 30Mhz.
100% continuous duty cycle. CW full break-in.
Built-in XIT. Switchable IF bandwidth.
Switchable AGC time constant. All mode squelch.
Built-in power/SWR meter. Versatile frequency control.
Built-in Antenna Tuner. YK-88C-1 CW Filter. YK-88SN-1 SSB Filter.
Mobile Mike, Manual, and DC Cable.
EXCELLENT CONDITION. $700.00
Buyer pays shipping charges!

HAL P38 HF MODEM
Manual, P38 COMM Software.
EXCELLENT CONDITION. $150.00
Buyer pays shipping charges!

The P38 is a multi-mode HF data modem that gives you top performance
operation using RTTY, AMTOR, P-MODE*, and CLOVER waveforms. The P38
is a full-sized plug-in card for PC-AT and faster personal computers.
Multi-screen menu-driven HAL software is included with each P38 modem.
Many popular "third-party" user programs are also available for the P38.

The P38 is complete and ready to run. Plug-in the board, connect three
phono cables (not included) to your radio, and install the software -
that's all there is to it!! Whether you want to rag-chew, chase DX, or
contest, the P38 is the modem of choice.
WILL SELL BOTH THE TS-440S/AT AND THE HAL P38 FOR $800.00 BANK
MONEY-ORDER, PLUS SHIPPING CHARGES!!!!!!!

The load control is used in conjunction with the "tune" control to peak the
transmitter output. If you are unfamiliar with tuning a "pi network"
output I would suggest you carefully read your book, or ask a fellow ham
in you area to show you how. Improperly tuned can and will cause damage to
your radio.

The LOAD and TUNE controls are on opposite sides of the coil in the PA. This is called a PI-network. Its purpose is to provide an impedance match from the tubes to the antenna. The tubes may be at 1500 Ohms and the antenna is 50 Ohms. This network provides the transformation.

Its use is described in the owners manual for your radio. A manual is a MUST HAVE item for this type of radio. A pair of replacement tubes run about $40-70, the manual is $15.....

Best of luck,

From: nw2m@qsl.net
Message-ID: <6vns5h$94g$1@nnrp1.dejanews.com>
Source record: 160481

Pat,

Since the tx and rx run off of the master osc, the only way to create this offset is to have one of the offsets turned on by mistake. Please ensure the SPLIT is not enabled and that the RIT is not enabled (not even displayed).

You may want to do a complete system reset (hold the A=B key and turn the power on). This will take you back to the factory settings. Remember to turn the mic gain back to hi, and other settings you may have. This rig is 1/2 computer and 1/2 radio!!!! You can even program how the S-meter behaves ! Wow!

If you rig is off freq on tx and rx, I have the cable to interconnect the two test points to do this adjustment, as you zero-beat with WWV. Takes longer to take covers off/on than to perform the adjustment!

How do you know the rx is off freq? Do you have to run the RIT in the "-0.3" position to have QSOs on the bands?

Keep us posted,

Al, NW2M

Any one have info on a JH 100 frequency counter?

I just bought it for my Kenwood TS820. It plugs into the IF out. The name on the front of it is JH 100 and it has two band positions, one for 80/160 and the other for 40 and up.

The guy I bought it from says it came with his TS 830 when he bought it but doesn't know anything else about it.

Any help much appreciated!

de Keith VO1AE

Gentlemen,
Last Saturday we had a Air Expo at our local air force base
in Charleston, S.C. would you believe that the entire day
that United States Air Force Personel and family members transmitted
on our local repeater ALL DAY using raidios with a tone that couldnt be broken.
they conducted traffic parking, concession stand info such as ''Hows your hot dogs
holdin out. after repeated try's to get the to stop using the repeater because they
were not licensed hams, we here in Charleston called the base commander and
was given the answer that the commander of the security force flow in from
pope afb chose the freq to operate the security on and that the rest followed
suit. we all explained to him that this was an amatuer band and that they were indeed
transmitting illegally and they must STOP. needless to say we were ignored and the
transmissions continued until after the event was over. we felt like the radios that they
used
were indeed raidios that would transmit out of band and wondered what our local
ARRL rep would do to remedy the problem. lord forbid someone pass some traffic
on a band that a F-16 would be on or have a qso on one of there freqs.
you would be fined inprisoned, property seized. e.t.c.
any suggestions will be taken. 73 all

Where is our 'ol buddy this weekend? Come to think of it, where's he been all
month? Haven't heard much from The Prophet of Phoenix lately. Did he finally
get
a life, or is he just on some kind of "Help the Blind" sabbatical or something?

Sure miss hearing 'ol Walter crank up on 3894.5 at night with a bottle in one hand and the mic in the other. What happened? Did he pass out on an open power supply and get the big capacitor jolt? Or did years of alcohol abuse finally take it's inevitable toll?

No suprises,only a ham 3 years but have already figured out that the
ARRL has its own agenda and my membership doesn't count for much.They
are very deceptive and dishonest in the way they deseminate information
and try to keep the membership in the dark as to what is really going on
(trying many ways for years to reduce code requirements is a good
example). AB7RS

Jim,

Let's not go down that path. We each made
decisions based on many criteria as to staying in
or leaving military service. I have absolutely no
regrets about getting out after my first enlistment
for many reasons.

To each his own!

Cheers,
Bill K2UNK

Burt my boy,

Who the hell you calling a loser. For your infromation, I spent 25 years in the Air Force, having retired this past September. By the way, if you were enlisted, (meaning you volunteered for service in the Air Force) you could have been enlisted (E1-E4) NCO (E5-E9) or Commissioned Officer (O1-O10). The term enlisted is loosely associated with the ranks of E1-E4.

As you only spent 4 years, it obvious the AF had some problem with you and felt it more productive to NOT retain you for further service.

My retirement pension makes my house payment and 2 car payments with a few bucks left over to support my ham radio habit. On top of that I have a full time line of employment which puts me into the 28% tax bracket

Visit the Linux Homepage at http://www.linux.org

Not only is there a lot of information about Linux in general, but there
is a section where you can access the HOWTO's (tutorials on specific Linux
areas). I think there are two that are specifically related to ham radio,
and one of them lists various programs useful to hams.

I thought I saw somewhere (maybe in the HOWTO) that there was a Linux
distribution specifically set up for amateur radio.

You might also spend some time in rec.radio.amateur.digital.misc
which would be the best choice for a newsgroup where amateur radio
and Linux intersect.

There are also the Linux newsgroups, in the comp.os.linux.*
hierarchy. I don't think there's one just about amateur radio,
but there are enough of them that you should be able to find one
that will be helpful.

From: James Nipper <jnipper@southeast.net>
Message-ID: <36210E22.129E@southeast.net>
Source record: 160357

No matter what quality of speaker I put on my hf rig, I cannot get what I consider to be decent quality sound from it. I realize of course that hf radio audio freq response is in a limited range, but I still think one should be able to get more decent quality sound from an external speaker plugged into an hf rig. Do any of you guys use audio amplifiars in conjunction with external speakers on ur hf rigs ?

I will appreciate any comments..

Hogwash. Every radio dealer in the US has a license to operate every radio that they sell? No way... Read the rules... SOME - MANY local (city & state) governments have laws forbiding such ownership - they need to be challenged - they don't have the authority to make and enforce such laws...

Check the rules. Both the FCC and ARRL sites have the "book" available online.
Part 97.403, read it. Protection of person or property. Any means available.

97.403 says nothing in THESE RULES withstanding prohibits the station from
using any means at his disposal to get aid for protection of person or
property...
IT doesn't say Part 97, it doesn't say amateur frequencies it does say ANY
MEANS, smoke signals, spark transmitter, flashlight, sending semphore with a
wet noodle would all be legitimate...

>I was in the USAF for 4 years, many of the people that
>stayed in long enough to retire were losers who could
>not make it the real world, especially enlisted NCOs.

But during those four years you *were* taking orders from
those lifer NCOs. Your four-year stint was 20% of what was
needed to retire. I believe that makes you 20% of a "loser"
(your choice of word, not mine).

Keep in mind that many of the "losers" you refer to are now working
in their second career earning much more than you, due to the years
of expertise they gained in their military speciality (retired
military personal are highly sought by most civilian employers);
add to that the nice military pension they receive and your income
is left in the dust. You pay medical and dental insurance - they don't.
You pay retail - they shop at the military base exchanges. You pay full
airfare - they take military MAC flights practically for free.

Each of those "losers" you refer to gave a good portion of his life in
service to his country. You didn't.

You've again made me ashamed that we're affiliated together within the
same hobby. Some day, when an article appears in this NG with the subject
line "Burt Fisher, SK" no tears will be shed from this participant.

>As you only spent 4 years, it obvious the AF had some problem with you and
>felt it more productive to NOT retain you for further service.

In the USCG, one is supposed to serve two additional years in the
reserve after the four years of active duty. If a similar commitment
exists in the USAF, that Burt left after only four years means the
AF did have problems with him and booted him out two years early.

SB DX @ WW $OPDX.378
Ohio/Penn DX Bulletin No. 378

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 378
BID: $OPDX.378
October 12, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N2VW, WB2RAJ/WB2YQH & The 59(9) DXReport, KN4F, WD4NGB, K6RIM, K8YSE, WA6KBL, W8AV, W8WFN, WA8JOC, KE9NA, NE9U, BA4TB, DJ5AV & DX News Letter, EA5GRC, F6AJA & LNDX, G3SWH, G4BUE & DX News Sheet, HK8RPV, JA1ELY, JI3ERV, PA3DMH, PT2TF, RA0FF and ZS5BBO for the following DX information.

5H, TANZANIA. Ken, WA8JOC (CY0AA), reports that Dave Heil, K8MN (ex-J52US, A22MN), is now officially 5H3US. He also mentions that Dave has just received some equipment, so start looking for major developments over the next 3-4 weeks for amateur operations. Dave will be in Dar es Salaam approximately 3 years. Dave's tower is not yet up, but he hopes to have at least a R5 vertical and a Butternut HF2-V vertical up soon. Because of his work schedule, which he reports is quite hectic at the moment, he will have less time for amateur radio than first thought. Dave plans to be active on all bands 160-6 meters on CW, SSB and RTTY. Ken, WA8JOC, will be his QSL Manager as in the past, so the same rules apply as Dave's A22MN operation... SASE will receive a card ASAP .... bureau cards are processed at twice per year, "or more frequently if the spirit moves Ken" as he indicates. QSL to: Ken "Shep" Scheper, WA8JOC, 5875 Cedaridge Drive, Cincinnati, OH 45247 U.S.A.

5J, BOCAGRANDE ISLAND (Update). This Colombian Island DXpedition was planned for October 10-11th, but was postponed until October 31st through and November 1st. Bocagrande Island belongs to the group of islands in IOTA SA-081 (El Morro Island, El Gallo Island and others islands). This operation will have two stations active on 20 and 40 meters using the callsign 5J8IB on SSB. QSL via HK3DDD or via bureau. This is the first DXpedition from here.

6Y, JAMAICA. Operators Jack/W4SO, Jon/K7CO, Dennis/AF7Y, Ken/K2KW, Tom/N6BT, Rich/N6BV, Robert/N6TV, Fredrick/KE7X, Mark/AG9A and David/W9QA will be active again November 20th through December 1st. They will use the callsigns 6Y5/homecalls, but during the CQWW CW Contest as a Multi/Multi

entry they will sign as 6Y2A. They plan to have seven stations active from an oceanside site at Discovery Bay using Force 12 yagis and vertical antennas spread out over a 1000 feet section of the ocean shore. QSL via home callsigns and 6Y2A via WA4WTG).

9N, NEPAL. The "DX News Letter" reports that David, G4ERW, is active as 9N7RW from Patan which is situated near Kathmandu. He will be here until November 7th. QSL via G4ERW.

AFRICAN TOUR (by JA1OEM). The 76 old year Mako, JA1OEM, has arrived in Banjul, The Gambia, on October 7th. This is his third time to visit C5-land. He will operate as C56HP until October 19th. He hopes to provide a new one to anyone that needs this. He will be mainly on the high bands this time. After "The Gambia", Mako will travel to Ougadough, Bulkina Fasso where he will operate as XT2HP until November 24th (activity may start on the 21st or 22nd). After Burukina Fasso, Mako hopes to go Cote d'Ivoire (TU), November 26th through December 5th (No callsign mentioned). After TU, he will return to C5. Mako hopes to visit Mali (TZ), but is not sure when and how long he will be in TZ. Mako will leave for Japan during Christmas. During his activity, look for his slow speed CW on 3 or 13 kHz up from the lower band edge on any band. On SSB, look for him on 3795, 7043, 14145, 18115, 21245, 249145 and 28475 kHz. He will try 160m from XT2-land late November. QSL via JA1OEM direct only, no bureau, to: Shinichi M Toyofuku, Box 9, Sawara, 287-8691 JAPAN

AH2, GUAM. The members of Guam Contest Club will be active from KH2 (Guam Island) in the CQWW DX SSB Contest. They have won the Oceanic leader in the Multi-Single category in 1996 and 1997. This year, they will have more operators and enter as a Multi-Multi category. The team of operators are: Aki/JI3ERV/NH2C, Kaz/JG3RPL/N1BJ, Seo/JR3RVO/WX8M, Toshi/JR7OMD/WI3O, Kazu/JK3GAD/AL7NC, Kou/JH7QXJ, Sam/JR8VSE, Yuki/JH1NBN/K3ZB and Koln/JP1JFG/N2IU. They will use the callsign AH2R. They report that their Sunrise/Sunset is 2013/0757z and to also look for them between 7075-7100 kHz on 40 meters. QSL via JI3ERV.

B4R, CHINA. Deal, BA4TB, reports that the JiangSu DX Club plans to participute in the CQ W SSB Contest as B4R. This station will be active on all bands, in the contest as a Multi Op/Single Transmitter entry. QSL via BY4RSA.

D6, COMOROS. The "LNDX" reports that Denise, F6HWU, will again be in the Indian Ocean and will be active as D68WU. She will be there from November 15th to December 5th. Activity will be mostly on CW and RTTY. She will be active during the CQWW CW Contest. QSL via CBA.

E3, ERITREA (Update). The "Space A DX Group" DXpedition is on track with their plans to operate from Eritrea. They will be arriving in Asmara, Eritrea, in 2 groups, one on the night of November 3rd, and the main group on the night of the November 4th. The first group will try to get all the details out of the way, and be ready for the main group on the 4th. They will make every attempt to be active starting during the day of November 5th. They can not get their callsigns until they arrive in

Asmara. They are still in need of financial support, mainly because of the added $500 per operator fee. Donations can be sent to WD4NGB. OPDX InterNet Subscribers will receive the complete unedited press release by Bruce, WD4NGB, as an additional bulletin.

FR, REUNION ISLAND. Phil, G3SWH, reports to OPDX that he will be on vacation/holiday on La Reunion Island (IOTA AF-016) from November 17-24th. He expects to be active on all bands 80-10 meters, CW only as FR/G3SWH with an IC-706 and wire antennas. Since this will be a holiday operation, his activity is likely to be restricted. Look for him during his mornings for an hour or so, and an hour or so during his evening hours. QSL via G3SWH: Phil Whitchurch, 21 Dickensons Grove, Congresbury, Bristol, BS49 5HQ, United Kingdom (or via the RSGB bureau).

FT5Z, AMSTERDAM ISLAND (Update). A FT5ZH DXpedition press release issued by Jeffrey, WA6KBL (pilot stn. for N. America), states that the FT5ZH DXpedition to Amsterdam Island is on schedule, and there are no problems so far. The equipment has been tested, the antennas assembled, checked and disassembled, and everything has been well packed and is departing from Marsailles on a ship to Reunion on October 5th. The operators are preparing their personal belongings and will depart by plane for Reunion in early November. They plan to visit several of the resident Reunion operators during their 5 day stay on Reunion. They will supervise the loading of the equipment aboard the Marion Dufresne (ed. GEEE, where did I hear that name before?). Enroute to Amsterdam Island, the ship stops at both Crozet and Kerguelen (reports at this time indicate they will not operate from these islands). They plan to arrive on Amsterdam Island on November 25th and expect to have all antennas erected and operational on November 27th. They will operate around the clock as much as they can until their departure on December 25th. They will have a much shorter journey back and expect to arrive home in Lyon very late on December 31st. OPDX InterNet Subscribers will receive the unedited press release as an addtional bulletin.

NCDXF CHANGE OF ADDRESS. The Northern California DX Foundation has changed its mailing address, effective immediately. Please note the NEW address: Northern California DX Foundation, P.O. Box 1328, Los Altos, CA 94023-1328

HR, HONDURAS. Operator Ernesto, HR1ERL, states that he is ready for the next CQWW SSB DX Contest and plans to be active on all bands. He will be mainly looking for African stations in the contest. QSL via HR1FC, P.O. BOX 1734, Tegucigalpa Honduras, Central America, Zip Code 11101.

HV, VATICAN. Look for the Pontificia Universita' Lateranense station, HV5PUL, to be active again possibly November 6-13th to celebrate the opening of the 1998/99 academic year. QSL direct.

JT, MONGOLIA. The "DX News Sheets" reports to look for Jay, W8JAY, who may be active this week (October 13-15). The callsign was not mentioned nor were there any other details. QSL via home callsign.

QSL INFO AND NEWS.......
Goose, W8AV, informs OPDX that he has finally received the VP5FXB QSL cards from the printers and will begin answering all contacts this week. He reports part of the delay was getting the artwork into a format that the printer could use. He apologized for the delays in QSLing, but this problem was beyond his control.

Edwin, ZS5BBO, reports to please note that he is now the QSL Manager for: GN3WOJ, GM2MP, GS2MP, GM6V and GM7V. If you have cards outstanding for these stations, please send him the QSL and he will get the QSLing up to date. GM8V will be active in the CQWW Contest and all QSL cards are also direct to him. For address see "Special Event" below.

The "RA0FF LogSearch Collection" now includes C6AKM (WAEDX contest 1998), C6A/DJ3TZ, C6A/DL8OBF, C6A/N4BP and RA0FF CQWW RTTY Log. Check out the log search on the WEB page:
http://www.qsl.net/ra0ff/CONT/tests.html

REPEAT OF CORRECTION. Alan, 3C5I, requests OPDX to repeat that the P.O. Box listed in OPDX.345 was incorrect. The correct address is: Alan Isaachsen, c/o Mobil Equatorial Guinea, P.O. Box 139082, Dallas, TX 75313 (ed. The P.O. Box needed one more digit!).

Jean, F6AJA, reports that he has seen an error in some DX bulletins. He states that he can send QSLs for FK8VHT ONLY, not FK8VHM or FK8VST or any other FK callsigns.

7Z1AB LOGS. Jim, KN4F, reports to OPDX that he has only receive all about half of the logs for this station since May. There are NO U.S. hams at the Embassy, and only a several Europeans have activated the station for a few contacts. He is currently unable to get the logs. He also feels the station was "SHUT DOWN" on October 8th.

The 3C5DX QSLs are back from the printers'. It is reported that Elmo, EA5BYP, is now answering all the cards received.

Didier, FK8VHN, from New Caledonia may be forced to use the bureau because of the postage costs in his country. He states 1 IRC is OK for return postage to all continents. French postage stamps are not valid. One U.S. green stamp "IS NOT ENOUGH": by 30% (for North and South America and Asia; by 50% for Europe.

SPECIAL EVENT. The "South African Corps of Signals" celerates its 75th anniversary on November, 1998. To mark ths occasion a special event station with the callsign ZS75SIG will be in operation during the period October 30th to November 30th. A field station will be operating from the Bluff Military Base on Saturday, October 31st, from 0600-2000z. ATTENTION RSARS stations, the ZS75SIG station is hoping to be allocated a RSARS number for this event also. The station will operate daily CW/SSB on 40/20/15/10 meters. A special QSL in the form of a certificate will be sent to all stations making contact with ZS75SIG and submit QSL cards together with 2 USD or 8 IRCs direct to: Edwin Musto (ZS5BBO), P.O. Box 211032, Bluff, 4036, South Africa. No cards via the bureau please!!

SPECIAL EVENT. Rev. Paul Bittner, W0AIH, will be hosting the special events callsign N98ITU during the upcoming CQ World Wide SSB DX Contest, October 24-25, 1998, in conjunction with the ITU conference which gets underway October 12th through November 6th in Minneapolis, Mn.

TL, CENTRAL AFRICA. Alex, TL5A, has been currently active on both 160 and 80 meters. Check 1833 kHz between 2230 and 2315z (also heard around 0415z). Also, check 3505 kHz between 2315 and 2330z. Before these time look for him on 14025, 14192 and 7001 kHz. Meanwhile, Alex's QSL Manager PA3DMH, states QSLing is progressing well and within the next two weeks all QSLs received up to October 1st will be mailed. By the end of October the backlog should be history and all requests should be answered within the normal two weeks (in > out). Log check is available at: http://www.igr.nl/users/pa3dmh/logs/log_search.html

TY, BENIN. Tom/DJ6TF, Tom/DL7BO, Sigi/DL7DF and Frank/DL7UFR will be active from here November 3-18th. They will operate two stations around the clock on CW, SSB and RTTY. Their main activity will be on 160, 80, 40 and 30 meters. They hope there will be good conditions.

VP5, TURKS AND CAICOS ISLANDS. The team of Frank/WA2VYA, Bruce/WA3RHW and Jack/N2VW will be active again as VP5T in this year's CQWW DX SSB Contest. All are members of the Frankford Radio Club. Their operation will be at Jody's (VP5JM) Hamlet on Providenciales (NA-002) and take place October 20-27th. There will be plenty of action on CW and the WARC bands before and after the contest weekend. QSL VP5T to N2VW direct via callbook address, or via the ARRL QSL Bureau, by adding "VIA N2VW" on the card. An E-mail with log data sent to N2VW's InterNet address (n2vw@skyhigh.com) requesting a card via the bureau will be answered with a bureau card... (no QSL is necessary). Same for SWL QSLs.

VY1, YUKON (Canada). "The 59(9) DXReport" states that in recognition of the 100th Anniversary of the Yukon Territory Gold Rush, the special callsign VY1A will be active during the months of October and November on all bands, CW, SSB and RTTY. VE stations are to QSL via VY1JA and all others via KB5IPQ.

XV, VIETNAM. The "DX News Sheet" reports that Larry, K6SGD, will be active October 20th through November 14th as XV1Z. Activity will be mainly RTTY. QSL via home call.

YL AND IOTA DXPEDITION. Teresa, PT2TF, informs OPDX that the "First PY Young Lady DXexpedition" will take place October 29th through November 2nd, using the callsign PR2YL on SSB and PS2S on CW. The team will be operating from Comprida Island (IOTA SA-024 and DIB 021). Activity will be on 80/40/20/15/10 meters. Look for them on the IOTA and net frequencies. The operators will be: PP5ASN, PT2TF, PY5OA, PY5NT, PY2DHP, PY2ATL and PY2KTT. QSL to PP5LL: Lira, BOX 08, Florianopolis, SC Brasil.

ZP5, PARAGUAY. Jon, KE9NA, will be traveling to South America on November 14th through November 25th. Most of his time will be spent in Paraguay. Jon will be active and will be signing ZP5/KE9NA. He expects that his activity will mainly be on 10 meters and 15 meters. Jon will also be in

Brazil and Argentina for some of the time as well, but he doesn't expect to do any operating there. At this time not all dates are set for when he will be in Paraguay. QSL via KE9NA.

ZS (South African) NEWS.....
Edwin, ZS5BBO, reports that he will be competing in the CQWW SSB Contest (October 24-25th). He will only be working 20m during the contest, so he urges all operators to turn their beams to South Africa and work the one and only "ZS5 Black Box Operator!!"

ZS3MM operation is still planned to take place from December 16-24th. Edwin, ZS5BBO, will be operating on 10/15/20/40/80 meters from the city of Diamonds - Kimberley. If you need ZS3 for any awards, this will be the time to put ZS3 in your log and claim any outstanding awards. Examples are: WORKED ALL ZS and WORKED ALL AFRICA. QSL via ZS5BBO.

Apologies for asking here, but does anyone know of a William Lockwood, of 38 Pommier, Hudson, PQ Canada?

He has written me a bad check (for some tubes) and that check did not get returned until a MONTH later! His e-mail account has been closed and I would like to contact him and make arrangements!

Thanks for any leads.

Best regards - Brian Carling, AF4K

N4VEH <n4veh@aol.com> wrote:
>Check the rules. Both the FCC and ARRL sites have the "book" available online.
> Part 97.403, read it. Protection of person or property. Any means available.

Here we go again. Please read the rules, and read them carefully, keeping in mind the definition of each and every word which appears (the FCC's definitions are what matters, not our own).

When the FCC says "...any means available..." they preface that with the phrase "amateur station." Now you have to ask yourself what equipment would legally be at the disposal of an "amateur station." An HT set to transmit on the local police channel is not part of one's "amateur station." That same HT set to transmit within an amateur band is now part of one's "amateur station." Shifting a radio's transmit frequency off an amateur band and keying the transmitter means you're no longer under the protection of Part 97.

Always attempt to be thinking in a legalist sense when you're reading the CFRs. Scrutinize each and every word, keeping in mind that lawyers wrote the document.

Above all, please don't disseminate false or misleading comments in this forum.

Sorry Jeff, but Congress giveth and Congress taketh away. I could get
free medical for myself if I choose to go to the VA being as I am a
disabled vet compensated at 50% but I choose to go through the
Uniformed Services Family Health Plan which in this area is now run by
Tufts Health Insurance. I do pay a quarterly premium for my family and
myself but it is small compared with what I would have to pay under
the program called Tri-care which is being implemented around the
country. As for dental, I am paying a premium through my company for
that. Military retirees don't get free dental coverage.

>You pay retail - they shop at the military base exchanges.

The commissary has pretty good prices--most of the time. But I do
very little shopping at the exchange. AAFES (Army and Air Force
Exchange Service) prices are pretty high even though at Hanscom AFB
they claim the best prices in town. I find prices and selection much
better downtown. I guess AAFES has get compensation somehow for all
the shoplifting and bad checks they have to write off every year.

I know in my case, the in my first enlistment there was a six year
obligation. Four years active and two years inactive reserve. I
could be incorrect but in DOD (USCG being DOT) I believe that you
acquire an inactive reserve obligation equal to 50% of your active
time served. I am still inactive reserve until September 1, 2003. 10
years from the date I retired from active duty and expect to receive
another piece of paper in the mail discharging me from that.

Speaking of reading this as a lawyer would, consider the following:

N4VEH wrote in message <19981011162750.08202.00003718@ngol06.aol.com>...

>97.403 says nothing in THESE RULES withstanding prohibits the station from
>using any means at his disposal to get aid for protection of person or
>property...

This wording does not expressly permit anything. It just says that THESE
RULES don't prohibit it. That does not mean that there is not some other
statute that does. THESE RULES don't prohibit murder either but I think
there is a law elsewhere that does. :-)

Oh sure they are Burt you've really hung me out to dry haven't you.

Hey Butthead, I was replying specifcally to your comments at the beginning
of the post, your so
quick to forget things you say.

You wrote: "The following are comments by a former high level employee of
the ARRL"

Really? You must know who he is since you know he's formally from the ARRL
and was a "high level" employee. So since you know who he/she is why not
attribute the quote to a real person instead of one of Burts fantasy
friends, which is usually what we get when your trying to make it look like
others support your point of view.

Depending upon what part of the country you are in, I am taking a Ten Tech 20 amp 13.8 volt power supply with amp meter to the Ham Fest just South of Salem Oregon, Saturday the 17th to sell. I plan on asking $50 for it.

You could also use a deep discharge battery, and charge it when the radio isn't in use. Most automotive type chargers aren't clean enough to use when the radio is on.

You could use a much smaller power supply with the transmit power set lower.

Good luck, hope you get on the air soon.

I suspect that if most hams added up the cost of their ham toys and
divided it by the amount of time they've been a ham, it would be much
more than $19.95 per month.

> wanted for pirating on "their frequency" and guilty of causing any
> interference they have ever had.

Actually much of the interference caused to public service frequencies
in my locality in the past 20 years has been from the city's own radios.
The cops leave their HT's in phonebooths and the fireguys leave them on
the back of firetrucks. So the kids have fun until the battery goes
dead. The city used to pay about $1500 each for them and of course
several were never recovered. So watch the swapmeets to get a radio to
carry for emergencies....

562. AEA PK-12 Manual Needed

564. 10 Meter Antenna Question

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-11 00:00:00 UTC
From: sigintman@aol.com
Message-ID: <19981010205911.09107.00006662@ng-fb2.aol.com>
Source record: 160411

Hello All,
If I were to take a standard 102 inch cb whip, what would be the correct length to cut?? As a Tech +, I can go from 28.300 to 28.500, yes?? Should I cut it to be resonant at 28.500?? Any ideas, thoughts are appreciated. On a budget here, I figure on using a mirror mount and mounting it on a outside mast.
Thanks for your help.
Sincerely,
Ed Hutton N3KEX+

570. Internal Battery for the HTX-202

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-11 00:00:00 UTC
From: mdebord@my-dejanews.com
Message-ID: <6vp6fj$5ij$1@nnrp1.dejanews.com>
Source record: 160417

I have a HTX-202 2 meter handheld. I bought it almost 5 years ago. Here lately, my "Err 1" comes on when I turn it on. According to the manual, my internal battery may need replaced. I would like to change it myself as opposed to sending it off to Radio Shack as the manual suggest. Does anyone know if I disconnect the lithium battery, will it screw the processor internal brains? I know I will loose what I programmed, but I can fix that. Secondly, what is the value of the litium? What is the radio Shack part number?

Thanks,
Mark KA4ICK

572. Problem with Outback Outrunner Antenna

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-11 00:00:00 UTC
From: Badger <thermionic@techie.com>
Message-ID: <quWT1.1871$4g1.3055454@news3.atl.bellsouth.net>
Source record: 160419
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc

Yea, I know some of you guys will say " That is is the
problem, I have an Outback antenna" But seriously,
the problem is that the dangblasted thing tunes way
too high. It hits resonance at the upper edges of each
band, with the stinger all the way out. I have it mounted
on a standard ball-and-spring mount on the rear quarter
panel of my Escort station wagon, so it seems like it would
have at least a minimum amount of metal under it. I have
the rear body panels & doors bonded with copper strapping for
even more peace of mind. It is mounted as high up on the quarter
panel as it will go, so is not up against the metal body. Any ideas?
Other than to toss it and get Ham Sticks for each band?

The problem is consistant - pretty much the same on all bands.
Even subbing a longer stinger only helps slightly. Great for the
few MARS and SHARES freqs that are above the ham bands,
but not so great for the "normal" bands.

Please cc: your reply via email, as my news server seems
to not be too awfully reliable at times.

Thanks

go here for some info;

http://www.arrl.org/hamradio.html

This might help about how the word Ham came about

"Ham: a poor operator. A 'plug.'"

That's the definition of the word given in G. M.
Dodge's The Telegraph Instructor even before radio.
The definition has never changed in wire
telegraphy. The first wireless operators were landline
telegraphers who left their offices to go to sea or
to man the coastal stations. They brought with them
their language and much of the tradition of their
older profession.

In those early days, spark was king and every
station occupied the same wavelength--or, more
accurately perhaps, every station occupied the
whole spectrum with its broad spark signal.
Government stations, ships, coastal stations and
the increasingly numerous amateur operators all
competed for time and signal supremacy in each
other's receivers. Many of the amateur stations were
very powerful. Two amateurs, working across town,
could effectively jam all the other operators in the
area. When this happened, frustrated commercial
operators would call the ship whose weaker signals
had been blotted out by the amateurs and say "SRI
OM THOSE #&$!@ HAMS ARE JAMMING
YOU."

Amateurs, possibly unfamiliar with the real meaning
of the term, picked it up and applied it to
themselves in true "Yankee Doodle" fashion and wore
it with pride. As the years advanced, the
original meaning has completely disappeared.

Owing to the facts that the ongoing 14.313/14.300 mess was concocted, created, initiated and continued to be nurtured until recently by KV4FZ, Herbie should be glad he is not in prison already, sharing a cell with Bubba and his wig & lipstick collection. Herb started the whole 20 meter mess in the early 80's by recruiting K4MME and W1GM (both deceased) to operate split on either side of the Maritime Mobile Network on 14.313 so as to cause interference to the net. He did this as he believed that one of the net officers, by holding position in a non-profit organization which supplied food and medicine to poor people in Haiti and Central America, was a front for some kind of infant adoption/baby selling ring. (only in the convoluted mind of Herb could someone come up with such BS) MME and GM were fined and lost their licences for a Year in 1983-4, Herb being suspected as the instigator of this mess. Herb then began to work on a net control station, KA4MUJ, to attempt to cause a split within the MMN organization. This was partially
successful as the ensuing mayhem went on for several years until MUJ passed away in 1993. During this time elements from other bands, mainly 75 & 10 Meters, became involved in the dispute until we have what we have today: the Maritime Nets hopping between 14.300 or 14.313 while the alternate frequency is occupied by a convoluted mess of people who don't have a clue about the origins of this whole mess that goes back for almost 20 years, and should be the topic of a book entitled "The Ham Radio Ongoing Neverending Story" - or - "The Dishrag Bawl your Eyes and Cry for Herbie Soap Opera".

Only...only in a hobby which is so replete and blessed with so many screwballs could something like the 14.300/14.313 mess go on and on and on and on for almost 20 Years.

The base does have a communications component to it, the 437th
Communications Squadron to be exact. Why not just contact the base
Frequency Management through thier orderly room at (843)
963-3505/3403. Their fax number is (843) 963-3489 It would have been
much smarter to contact them than to contact the Wing or Base
Commander.

You could also contact the Air Force Communications Agency at
afca-rmip@afca.safb.af.mil.or phone them at (618) 256-4396.

Gee, were there any commissioned NCOs Burt?

Just to let you know Burty ole boy, the losers are the ones who
couldn't stick it out. Besides, no one cares what your idea of
success is anyway. If you are looking at monetary compensation as a
means of measurement, I'd say I have no doubt that I make a lot more,
now, than you do pea-brain...and without counting one cent of my
pension. That makes me a heckuva lot farther from being a loser than
you are.

You couldn't make it any more than four years in the USAF working with
adults huh Burt? You are more comfortable working with children
because they are closer to being your intellectual equals and easier
for you to maintain control over. After all, you are a control freak.
Right Burt?

I don't have any idea what it's like to be delusional Burt. Could you
please explain it to rest of us so that we can understand where you
are coming from all the time? Inquiring minds want to know...

>Steve, KA1OWC

I have two of them. One has the MH39 controller and the other has the FS10 controller (Mr. Potato Head). I thought I wouldn't like the FS10 controller, so the first one I bought was with the MH39, but after the learnig curve is mastered (which is steep for either controller), it turns out I like the FS10 better.

There isn't really a whole lot to say about them aside from the unusual control interfaces. As radios, both perform the same, and are roughly comparable to the other full feature dual banders on the market. I haven't had any real problems with either one. At current pricing, I don't think you can get a better dual bander for the money.

The only other comparable remote mount radio with the controls in the mic is the Standard C5718DA. It even has the display in the mic. I considered it instead of the FT8500, but the learning curve for it is also steep, I couldn't get cross band repeat to work right on the one I tried, and it costs a lot more than the FT8500.

I would caution that neither of these radios is for the operator who likes to fiddle with advanced features of the radio while driving. The learning curve to operate them for anything but the simplest functions is steep and non-intuitive, and even after you learn them, fiddling with them requires more attention than you should divert from your driving. As long as you are content to call up a memory channel for your local repeater and talk, they do fine. Save playing with the more advanced features for when you are safely parked.

Hi all,

I'm trying to find a little 2" 'belt drive' (the rubber belt that drives the capstan motor) for a cassette recorder, but can't seem to find an outlet that sells them. Can someone offer any suggestions?

I used to pick them up at Radio Shack - but they don't carry them any longer...

Email please - Thanks.

good for you. probably all you can explain is that you need to
write an exam to get a license and then call CQ CQ CQ. Of course we
shouldn't forget to introduce the world of morse code when people ask
us what ham radio is. By the time when you start to punch CW keyer,
the people leave.

Hi Tom,

I have had the same trouble with my Perth on some bands, not to mention when I go to Alaska where they operate on the lower end of 40M. The good news is the solution is simple.

The problem is that there is not enough stinger for the lower end of many bands. Since a longer stinger is difficult I use a diffrent system.

Go to Radio Shack or the supplier of your choice and get a few bananna plugs. Solder bare copper wire about a foot long into the plugs. Plug the bananna plug wire combo into a tap above the tap you are using ie. if you are trying to tune 20M put it into the 15M tap. Then check the resonant point and trim the copper wire as needed. When you like the match melt a little blob of solder onto the end of the wire for a corona ball. You can make a little cheat sheet for the various bands. I don't find it any more trouble than changing the tap when changing bands you just change the tap and install the proper tuning gizmo.

I have a several of these tuning gizmos in various lengths that I carry with me when I travel. These and my trusty Autek RF-1 let me tune up on most anything the rental car company gives me.

Hope this helps Jerry

I enjoy ham radio when it is actually getting to know other
hams on the air and being able to run into them more than
once..

I am very active on 80 and 40 meter pactor/gtor and find
this mode very condusive to a long-winded "let's share war
stories" type of operation. I am not into contesting, but if
you are, then that's your niche in ham radio. Personally,
exchanging signal strength reports and qsl information, only
to run off and do the same to the next station seems a waste
of spectrum resources...

maybe it is only the "old farts" that have the necessary real estate
for 80 meter antennas ?? :-)

BTW, I have a house that's paid for in silicon valley, AND I have
a 110 foot dipole fed with ladder-line, but I am still courteous
on the air...

Not to mention, that most of these are robots.

Basically the whole disease is what General Patton referred
to as "paper hangers."

That is, people who's sole lease on life is to accumulate paper
to hang on the wall. The extreme being people who belong to
Mensa type organizations. If their IQ was so high, they must
realize how stupid the whole idea sounds. But that isn't the
case.

There's four things to hang on your wall: 1) Your High School
Diploma, 2) Your College Bachelors Degree, 3) Your College
Masters Degree, and 4) Your Doctorate.

Everything else is akin to mowing the lawn...

Actually, you probably should hang your station license there so
you don't forget to renew it in time.

But then again, I don't know why you'd waste space with the above when
you could put other things that are more meaningful up instead.
(like photos of places you'd like to return to, awards from other
parts of your life, a poster or two......)

Mike,
I had one, and for the price it was ok. The transmitter is very strong, great xmit audio. Had comments stating "it sounds like a fan is in the background", if you have ever flown sort of like the throb of jet engines at cruising altitude, only not as loud. The receiver sensitivity was very poor, ok for local repeater outputs, maybe short simplex range, but forget anything serious. The extended life nicad didn't have much of a "extended life", even after a 3 cycle conditioning break in on a professional battery analyzer. The case is thin, gets very hot quickly, even on moderate power levels. I'd say this is a good beginner's radio, or one for a back up. Myself, I'm looking seriously at the Kenwood dual band.
Best of luck to you,
Ed N3KEX+

I believe CEPT is the reason behind the FCC restructuring plan. Getting
hams to accept fewer classes, a single code testing element (12wpm)
and less structure in general is a tough sell in America. What we forget
is that most standards are now being settled in Europe not here. They are
leading us.

615. WTB: crystals

Newsgroup: rec.radio.amateur.misc

I have a friend that is looking for some crystals for the following radios and frequencies.

1. A UHF GE Custom MVP for possible 440 packet (TX & RX) (not sure of the freq).
2. A VHF Motorola MAXAR 80 for 145.010 (TX & RX) packet and APRS (TX & RX) (not sure of the freq) and 147.375 RX and 147.975 TX.

If you have any crystals that meet these criteria, please email Mike at mlenth@iastate.edu with prices. Thanks.

> QSL card, and ask for one in return?

Yes, but (see next question)...

> Are people willing to send QSL cards
> (assuming they even have any)?

Yes and no. Many people will QSL if you send them one first and ask for
theirs :-) Many others will if you include an SASE (self-addressed, stamped
envelope) ;-) Some won't QSL no matter what :-(

If you are looking for an overseas card, send an addressed envelope and pay
the return postage with a green stamp ($1 bill - or more for a few
countries).

What is a QSL bureau? Do I use one? Do I
> have to use one? How do I use one? What are alternatives, if any?

Buros can handle cards between different countries at a reduced rate, but
at a slower speed. Check the ARRL web site for info on their buro.

> Any help is certainly appreciated. Thanks.

Try http://www.ac6v.com/pageff.html#PRIMER for some QSL resources. (Beat
you to it Rod!)

> turn out a successful product.
> Jeff KH2PZ

I guess you have to define scratch. I don't think any of us can make things from trees and rocks. If you mean old parts and gear to make cheap stuff, then I think it could go either way. Just last week I picked up 2 Zenith 8086 (vintage 1987 no HD's floppy's only) laptops for $5 total at my local swapmeet. When I got home I was surprised to find that both worked. Now I agree these weren't built from parts like you might build a radio, but you can't make a tube from scratch any more that I can a microprocessor from scratch. But I think this discussion is more about doing it cheap. Anyway, the local University here offers free telnet internet dialup, so all I would have to do is hook a laptop to a $5 2k modem(another swapmeet purchase...actully $5 is high for a 2k modem these days) and I'm on the net...admitedly slow and text only. Total price..about $7.50 -no monthly fee. (This system would be fine for newsgroup access and email and in fact many on this dialup service are using Commodore 64's!!)

Last year I found an old hq110 for $5 (this was a non-ham swapmeet, admittedly a lucky find). Add that to my t60 for $10 and I'm on the air (both did need a little work)for $15. (I already had wire for an antenna but since I already had the R7 up I won't count that...I could have used the wire. (I admit it , I'm a swapmeet junkie)

So I agree, It's still easy to get on the air cheap, and probably more fun. But also...in reality I love new toys. So I guess I've got about $5500 in ham gear and $5000 in computer stuff(not to mention my $3000 of midi keyboards). I don't know what my monthly bill would be on it all but suspect it's way over $19.95 a month...maybe I don't really want to find out!! And I suspect that many out there are like me and love to visit the candy store as I do. Many have much much more money in their toys I'm sure. Some of the antennas I see in the ham mags cost more than all my toys put together, and then some. (I think that's envy speaking.....)

And lowering power also helps. You would be surprised how well 25 or less watts gets out, especially under the improved band conditions.(The minimum power necessary regulation is probably the most violated of all.)

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 12/2330Z OCTOBER 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 12 OCTOBER AND FORECAST FOR 13 OCTOBER - 15 OCTOBER
STATUS INDICATORS SOL:GREEN MAG:GREEN ION: GREEN

1A. SOLAR SUMMARY
Activity 12 Oct: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number for 12 Oct: 114/65

GOES satellite data for 11 Oct
Daily Proton Fluence >1 MeV: 3.8E+05
Daily Proton Fluence >10 MeV: 2.1E+04
Daily Electron Fluence >2 MeV: 1.70E+08 (moderate)
X-ray background: B4.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
13 Oct 14 Oct 15 Oct
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 13 Oct: 115/66
COMMENT: Solar activity may increase after 13 Oct as a previously
flaring solar region is due back on the east limb of the Sun
around this date. At present the east limb of the solar disk
appears quiet.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 12 Oct: Quiet

Estimated Indices 12 Oct : A K
Learmonth 5 2111 1222
Fredericksburg 5
Planetary 10

Observed Indices 11 Oct : A K
Fredericksburg 7
Planetary 8 3210 3333

2B. MAGNETIC FORECAST
Date Ap Conditions
13 Oct 8 Quiet to unsettled

14 Oct 8 Quiet to unsettled
15 Oct 8 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
12 Oct Normal Normal Normal
PCA Event : No Proton/PCA Event In progress

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
13 Oct Normal Normal Normal
14 Oct Normal Normal Normal
15 Oct Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
12 Oct 117

Observed Australian Regional MUFs:
Darwin: 15-20% depressed during local day hours, and
15-25% enhanced during local night hours.
Townsville, Sydney, Hobart and Christchurch: Near predicted
monthly values.

Predicted Monthly T index for October: 96

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
13 Oct 100 near predicted monthly values
14 Oct 108 near predicted monthly values
15 Oct 102 near predicted monthly values

Doing what at what level? Most officers I met were competent as
were most others who got out after one term.

By the way, if you were
> enlisted, (meaning you volunteered for service in the Air Force) you could
> have been enlisted (E1-E4) NCO (E5-E9) or Commissioned Officer (O1-O10).

I know of no USAF draftees.

> As you only spent 4 years, it obvious the AF had some problem with you and
> felt it more productive to NOT retain you for further service.

Are you stupid? How is it obvious?
I was retained and begged to stay several times. I said no thanks.
I gave up a reenlistment bonus.

> My retirement pension makes my house payment and 2 car payments with a few
> bucks left over to support my ham radio habit. On top of that I have a full
> time line of employment which puts me into the 28% tax bracket

But you had to stay in 20 years, it was not worth that.
Indeed you are doing well today but if you are competent
you would be doing much better if you left.

> Jeff K. Steinkamp (MSgt, USAF, Ret)
> Flight Simulation Engineer
> KD5YG

Based on your rank and job it sounds like you were quite
competent. Think what you could have been. But on the other
hand maybe our country is far better off you served.

There is truth there for sure.
But many would be far further along if they left the service.

> add to that the nice military pension they receive and your income
> is left in the dust. You pay medical and dental insurance - they don't.

I don't pay, my employeer does. And they must live near a base plus
I found government medical care to be second rate.

Call one of the Amateur Radio dealers.
You should be able to get a power supply for around $70.00, or so.

This is a strange one. the radio display blanks out on transmit. when the mike is released, the radio still transmits & the diplay shows some greek characters. in this transmit state the audio from the mike can still be heard on the other end. i have to shut the radio off to reset it.

the one thing that has me stumped, on crossband repeat it wont cut out at all

I'm thinking its the mike thats screwd & wondering if any one else has seen this problem.

>>The FCC says "...it's impossible to interfere with unauthorized
>>transmissions..." Thus, no "jamming" took place.

>But where in writing does it say that?

"The FCC says" means I was told that by an FCC representative over the telephone. A couple years ago the topic of illegals operating on 10m came up on here. One proposal was to transmit a normal amateur QSO on top of the illegals, and if the illegals QSY somewhere else on 10m, follow 'em and continue the QSO on top of them. Some folks thought this could be construed as intentional interference. I phoned the FCC in Washington and asked to speak with someone knowledgeable of Part 97; I presented the above scenario to him. His conclusion was as written above: It's impossible to to interfere with unauthorized transmissions.

Think of it in this manner: Televisions emit a carrier on 3579 kHz, yet QRPers hold their QSO parties on that same frequency (xtals are cheap and plentiful); are those QRPer's causing intentional interference to these color burst emissions?

Another example: Remember the Russian "woodpecker" OTH radar from a few decades ago? Did you continue your QSOs over the radar signals or did you QRT so you wouldn't cause "intentional interference"?

If my CW transmitter is causing key-clicks up and down the band, do you QRT so you don't cause "intentional interference" to my key-clicks? If I'm using my home-brew VFO on 7040 kc and it's emitting a harmonic on 14080 kc, do you avoid that 20m frequency so you don't cause "intentional interference" to my unsupressed harmonic?

>You think it would hold up in a court of law?

Whose going to file the complaint? The illegals?

I suggest you begin with it at 102 inches, and start cutting say, 1/4
of an inch at a time, checking the SWR after each snip. You can check
the whip's actual resonant freq'y by tuning up and down the band and
noting the lowest SWR. If you plan to upgrade to General or above, cut
the whip for the middle of 10m; if you don't plan on upgrading, then
follow the above suggestion - cut it for 28.4 MHz.

That you'll be mounting it on a tower means the above will be a tedious
process (climb up, snip, climb down, check SWR, climb up, snip, ...)
but you should cut and check with the antenna in its permanent location,
if at all possible.

>divided it by the amount of time they've been a ham, it would be much
>more than $19.95 per month.

Let's see - are you talking about a monthly operating cost ($19.95)
or the cost of the equipment? Your initial post mentioned nothing
about the cost of equipment. Since you're insinuating that the
internet is cheaper than ham radio, you need to include the amount
the average person spends on computer equipment, for your comparison
to have any validity. Yet I can guarantee that you've spent more
on computers than I have on radios *and* computers!

Tell you what - let's have a contest - I'll build a radio and
you build a computer - both have to be built from scratch - each
of us spends no more than $19.95. Let's see which of us will
turn out a successful product.

You are right - he does put a lot into it.

I got frustrated when I couldn't reach him, and I was wrong to post a notice with the kind of tone it had.

I apologize to AL and the rst of the group for not thinking that something like that might have happened. I guess we get spoiled when an excellent free service like that runs so trouble-free for years!

I goofed and assumed he had taken it down when it crashed and disappeared for a day.

Sorry fellers.

This is a story most hams cannot "get."

A Tail (spelled correctly) of Two Hams.

In a place far, far away in a time not so long ago
(actually Cape Cod 1997) there were two hams who were friends.
Moose, KF1OF, and Dick, KC1HOT. It came upon a great contest
weekend in November (yes I know great contest is a contridiction
of terms). The contest was called Sweepstakes not to be confused
with the so called "SS" infamous during World War II. Although
both SS's had a tendency to push out the small guy, the ham radio
version is more benign. KD1OF was intent on scoring big in the
contest. In fact he formed a special club called the Old Farts
of Cape Cod (he used the suffix of his call to get the name),
this club gathered huge sums of money by selling off the estates
of dead hams in the name of education and then spent the money
on Japanese radios, American beams, and computers in order to build
the ultimate contest station.

The great day came (pun?) and the members gathered
together. They pooled their best cliches (finest kind, Righto,
Fine Business, none of your beeswax, Ciao, HI HI,
Thunderbumpers, QSL, Let me be honest wid ya, anywho,
destinated, arrivanated, 59 (but never ever Six nine), let me
drop it (never said in mixed company). They all practiced
saying, "Cq Contest, contest, contest, contest contest, contest,
contest contest, contest, contest contest, contest, contest
contest, contest, contest contest, contest, contest contest,
contest, contest contest, contest, contest" and then listening.
They drank a few 807's (beers). They ate some popcorn and beans
(in order to sing the club song-named after the club). Finally
the big moment arrived (or should we say arrivaniated). But
where was the ham who could really score, KF1HOT, Dick? No one
could find him. It was decided a Contestpediation would be sent
out to Dick's house as the L A N D L I N E was all twisted up
in a knoted pair.

The Contestpediation arrived at Dick's house, all was
quiet, the beam was erect but not rotating, the dipoles were
lying in the trees softly, and the whip (on the car) was
slightly bent. The hams knocked on the door, but there was no
answer, even though a few lights were lit softly and both cars
were in the driveway. The hams gave up in despair, and they
headed back to prepare for the SS. On the way back they laughed

that Dick probably was doing "honey Dews" (honey do this, honey do that-hams love to use this term). They lamented that Dick was fixing the rugs, or hanging plants, or doing light plumbing.

Moose got suspicious that there was more to this disappearance, and headed back to Dick's QTH. When he got there he peeked through the blinds and what did he see? He saw that the lights were dim, but not out. He heard the music from the movie "10." He saw Dick's wife of 15 years dressed in a light silk blouse. As he watched it was clear that the love and affection of this couple was as warm as it was genuine. They playfully went from room to room with an occasional kiss and warm embrace. It was clear Dick was not going to be at the contest, but he was not going to miss it.

When Moose returned to the rest of the hams they inquired as to what was up at Dick's home. Moose replied to the hams, "you wouldn't understand", but Moose understood. Moose left the hams to their astonishment, and went home. Upon arrival his wife greeted him at the door and said, "Honey you are going to miss the contest!" Moose replied, "I will never miss another contest, there is nothing about contests to miss." Moose and his wife drew the curtains and began life.

Disclaimer: Nothing in this story relates to any hams living or dead (assuming any hams are alive in the first place). The story is complete fiction.

The ITU 1998 meeting opened today in Minneapolis, Minnesota, and will be in session for the next several weeks.

Amateur Radio demonstrations and events, sponsored by the ARRL, and with the involvement of many local organizations, will be very visible to delegates from 182 countries across the globe.

Operating stations, including HF, VHF/UHF, digital and satelite operations are located in the convention facility, operating under the call W98ITU. Call us when you hear us on the air.

Also listen for our sister-station N98ITU during the CQWWDX CW contest, operating from the W0AIH super-station.

You can view our 4-color QSL card at:

http://members.delphi.com/HansK0HB/index.html.

Click the link named "W98ITU".

<ka8ddz@hotmail.com> wrote:

>Your absolutely correct Jim, while I enjoy reading and writing to the
>newsgroup, I have little time to spend here so I usually don't run the spell
>checker or bother to proof for spelling or grammatical errors. So what did
>you think of the post?

I'm curious as to which smaller kit manufacturers you are speaking of
Tim?

I am not a perfect speller myself Tim as sometimes I will
inadvertantly hit the key next to the intended key -- touch typist.
But I don't see why so many people get upset and defensive when I
correct theirs in my postings. I don't mind if they correct mine.
When I do get a rise out of someone I feel I have accomplished
something though.

It's almost the same as many of the newbee hams coming into the hobby.
They don't want to be corrected or taught by a ham with more
experience. They came into the hobby already knowing all there is to
know because they learned it on CB.

BTW, I do recall being flamed to no end years back when I corrected
someone's spelling for them. All I have to say now, is get used to
it. I will take the blame for all of the English and spelling
teachers out there and give them a break for once.

No one cares? I sure do. Except I don't care what others think about
me correcting their spelling. It pervades the NGs just like this
attitude thing pervades amateur radio. Someone has to give a damn!!

655. IC271/471 & CT-16 Question

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-12 00:00:00 UTC
From: Paul Knight <paul.knight@prairiecomm.com>
Message-ID: <6vsumq$er1$1@eve.enteract.com>
Source record: 160326
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Hello! In order to use the Icom CT-16 Satellite Interface box with the 271H/471H combo, is it necessary to have the UX-14 level converters installed in both rigs? I don't plan any computer control of the radios, but I would like to be able to slave one to the other for easier tracking. Since the UX-14 interfaces are seemingly non-existent these days, I don't want to buy a CT-16 and not be able to use it.

Thanks for any input,

Paul WD8DKY

Hi, group...

I've been asked to find out how to charge the batteries on Motorola Visar handies. "Why not buy a charger?" is not an acceptable response, apparently -- I tried that one first!

Can anyone tell me what the pinout on the batteries is, and whether there are any gotchas to watch for before just slapping them into a standard charging circuit?

I have a horrible feeling the next question will be 'how do I modify the working frequencies': I've looked at the Web stuff on this, and I can foresee a happy few days hunting down software and hardware to reprogramme the little darlings. They do look rather sweet, though -- does anyone know how to tell the VHF and UHF variants apart? I may just borrow them and slap them onto 2 or 70cms, if I can crack the programming.

Luck Hurder, a former ARRL employee who reportedly refused to stop posting
to USENET from work. I don't think I would have classified Luck as a
"high level" -- mid-level, maybe, definitely not clerical, but definitely
not 'high-level' either.

>
>Will a lowpass filter work? I using 100 watts into a dipole. I have no
>problems in my own house at all.

A lowpass filter probably won't help at all. You're getting into his
surround sound system by fundamental overload. It is inappropriately
acting as a shortwave receiver. That's *his* problem according to the
FCC. But if you feel like helping him out, and that's a good idea from
the standpoint of neighbor relations, then you can help him add toroid
chokes to his speaker leads and power leads. That'll reduce the amount
of RF getting into the amplifiers and being rectified to audio there.

The TV problem is probably fundamental overload too, though it is
possible that the problem is harmonic radiation from your equipment.
If the interference shows up on only some of the TV channels, it
may be your fault. Then a lowpass filter on your transmitter may
help. But if your TV is clean, then it probably isn't your fault.

Again, if it is fundamental overload, it is *his* problem, not yours.
But again you can help. This time what is needed is a *highpass*
filter on his antenna lead. This will pass TV signals and reject
shortwave signals. You may also need toroid chokes on the
AC power cord of his set, and on the leads to any external
speakers, same as with the stereo. Remember, the equipment
is inappropriately acting as a shortwave receiver. It isn't a
fault of your installation. The fix has to be where the problem
exists, and that's with his equipment.

Of course the inverse square law is your friend, so if it is in
any way possible to get your antenna further from his equipment
and antennas, do it. Higher is better than greater horizontal
separation, but either one will help.

I suspect that your power supply can't supply enough current during
transmit. That causes the voltage to sag, which addles the brains of
the microprocessor. In crossband mode, the rig goes to low power
transmit, so it doesn't overload the supply.

Check for 13.8 VDC at the radio during transmit. If you see it drop
below 11 VDC, you've found your culprit. If you're operating from an
AC supply, it may be too small. If you're operating in the car, your
wiring, including fuses, connectors, and body ground connection,
may have too much resistance.

If the problem is voltage sag, you'll have to find the cause and fix
it. In the case of the AC supply, you may need a bigger one, in the
case of the car, try wiring direct to the battery with heavier cables.

>amplifiars in conjunction with external speakers on ur hf rigs ?
>
>I will appreciate any comments..

If you look at the audio specs for most amateur receivers, you'll notice
that they are specified at 10% THD. To put it mildly, that isn't HiFi. So
a first cut at cleaning up the sound of your rig is to clean up the audio
amplifier stages in the receiver. The average HiFi audio amplifier will
sport a THD on the order of 0.01%. That's what you should shoot for
with your amateur rig's audio stages too.

Once you clean up the amplifier, a better speaker may also help,
but until you do, a better speaker may just reproduce more of the
garbage the audio stages are generating. In other words, putting
a high fidelity speaker on an amateur rig often sounds *worse*
than using the stock speaker.

Now once you've cleaned up the audio stages and hooked up a
better speaker, you still have to deal with the phase distortion
and restricted bandpass of the IF chain of the receiver. Narrow
filters with steep skirts add distortion, often a *lot* of distortion,
to the signal. Your newly cleaned up audio amp and wide range
speaker will pass this crud while the original circuit and speaker
might not. So your radio may sound worse than when you started.

Unfortunately, there isn't much you can do about this except fit a
wider filter with gentler skirts. That lets in interference from adjacent
stations, so that usually winds up leaving you worse off than when
you started.

So in conclusion, trying to get HiFi sound from an amateur
rig is a losing proposition. As you solve one problem, it will
unmask another, often worse than the original. You have to
learn to live with the fact that you get communications
grade audio from a communications receiver, not HiFi.
It is one of the tradeoffs you have to learn to accept in order
to work with weak signals in a crowded band.

Hello,

I have a B&K Precision 520B Transistor Tester forsale. It can test
NPN/PNP/FET in and out circuits. It can also determine whether the
transistor is NPN/PNP, determine B,E,C leads, identify if the transistor
is Silicon or Germanium, measure leakage current. The tester is in excellent
working condition and coming with complete manuals and test leads.

Picture of the Tester:

http://expert.cc.purdue.edu/~yulius/transistor.jpg

I am asking for $95.00(shipped). If interested, please send email to
yulius@ecn.purdue.edu

Best regards,

I have this booklet from 1938 called Gernsback's Radio For Beginners.

http://www.concentric.net/~Melissa9/radiobeg.gif

It's a fascinating collector's kind of item. 32 pages, good condition.

It should probably be in a radio museum somewhere.

Does anyone know what it might be worth? I could use the money if I knew it was going to a museum instead of sitting around here.

And that's my opinion.

Cliff regularly shows up giving advice about kenwoods on a Kenwood
mailing list. I might add that people who send him their kenwoods to
be repaired don't have any complaints later, and his advice on how to
do it yourself is always accurate. I can't speak even this indirectly about
his Icom level of service, but judging from his kenwood reputation, it's
not much of a risk to send him something.

672. How do I "do" QSL's ?

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-12 00:00:00 UTC
From: David Snyder Hale <david@isi9.mtwilson.edu>
Message-ID: <6vrhulpl1@agate.berkeley.edu>
Source record: 160391

I'm wondering what are the logistics and practices surrounding QSL'ing. I've just gotten into 2m SSB (the Sept VHF QSO contest last month was my first go at it), and I'd like to try and collect DX grid squares.

I don't have any QSL cards made up for myself yet, but I'd like to send and receive some for my first-ever SSB QSO's, which occured during the contest. (I figured I wouldn't QSL each of my contacts, but just a handful, say one for each unique grid.)

However, various things I've read (but not paid too much attention to, since they never used to apply to me) only have me confused on what to do. Do I just lookup the operator's address from their callsign, send them a QSL card, and ask for one in return? Are people willing to send QSL cards (assuming they even have any)? What is a QSL bureau? Do I use one? Do I have to use one? How do I use one? What are alternatives, if any?

Any help is certainly appreciated. Thanks.

Help! I have an old Kenwood TH-205AT handheld 2 meter transceiver. The original NiCad battery was a simple 8.4v @ 500 mah battery PB-2. Since the PB-2 is no longer produced, I found a replacement KNB-3 pack.

How is the KNB-3 rapid charge pack recharged? The original 500 ma DC charger will not charge this pack.

How do I charge a KNB-3 rapid charge pack? How is this different internally where the old (and simple) charger no longer works?

Thanks in advance,

Al, NW2M

I tried about 4 of the CW decoders on that site, and couldn't get any to recognize any code. Closest was 'dspmorse' which at least obviously 'heard' it but couldn't translate any of it.

I am using a Kenwood R-1000, with an AST MS P/100 which has a generic 'SB compatible'? soundcard on the motherboard. I fiddled with the parameters and levels to no avail. There was a little QRN but the CW was clear enough to human ears. Shouldn't this work?

I used FTV, that decoded CW and RTTY without any problems, It sort
of decodes the WEFAX as well, but I get a slanted picture for some
reason?. I haven't been able to find anyone transmitting SSTV to
see if it decodes that ok, but it has the option for b/w and colour
SSTV so I will try it when I get a chance.

My setup is VERY basic, just a dx4-100 pc and a Realistic dx-394
shortwave receiver with it's own telescopic antenna, but it seems
to be working ok (apart from the slanted WEFAX pictures) for what
it is.

Re: gor8a14 Drake R8A and R8B shortwave radio control

GO R8A v1.4 is a DOS based program for controlling the Drake R8A
communications receiver. It runs on 386 and newer PCs. This program can
make using your radio a little easier if you don't mind typing commands.
There are enhanced functions, such as:

Backup- Copies channel memory from the radio to an ASCII data file.
Store mem- Copies channels from an ASCII data file to radio memory.
Go- String search, go to station stored in radio memory.
Scan A-B Special --\
Scan Freq Special ---Specialized scan functions that do not alter
Scan List Special --/ radio memory.
Channel Data- Single screen input of channel data to radio memory.
Set Time- Simplifies setting of PC/radio local and UTC time.
Schedule- For scheduling listening or unattended taping.
Spectrum- x-y plot of signal strength vs. frequency, with ability to
slew across the display, across all or any portion of radio coverage.

This shareware program is fully functional with complete documentation.

Special requirements: Requires Drake R8A or R8B communications receiver
properly connected at a serial (COM) port.

Joe Fahrenholtz, 3711 Mt. Carmel Rd., Cincinnati, OH 45244-1617 USA
E-mail: joe_fahrenholtz@juno.com

This version replaces gor8a13, which is widely available via ftp.
At this writing, gor8a14 is available at:
ftp://ftp.funet.fi/pub/ham/rigctrl
http://www.filelibrary.com [new files]

The first 10 people to try this new version and send me comments
will get free registration.

683. Announcing: DC Area Boatanchors Enthusiasts E-List News.

Newsgroup: rec.radio.amateur.misc

The list is alive again and happily settled into our new quarters at:

List-server.com

This group is for shortwave and amateur radio fans who enjoy old radios etc. in the DC, Baltimore, Northern Virginia, Delaware, and yes, even a few folks in Delaware! But EVERYONE is welcome no matter where you live. Just be aware that some of the conversations will about matters of local area interest!

Join us for great conversation, or to buy and sell the old gear and to get help with mods, parts etc. etc.

For details see:

http://www.mnsinc.com/bry/dcba.htm

Fellow CW enthusiasts:

I know from others (and by experience) that copying 20wpm. requires the technique of "copy behind". I am looking for advice on how to develop that skill. Heck, any technique to help develop high-speed CW skills. Can you help?

I already know, and practice, one thing--getting on the air and working CW! ;-)

I just I passed the General exam! Now it's on to 20wpm in preparation for the Extra exam.

> frequency off an amateur band and keying the transmitter means you're
> no longer under the protection of Part 97.

I disagree with your reason, though I agree with your conclusion. They're very explicit about "ANY available means of communication". However, 97.403 itself says "Nothing in *these*rules*" shall prevent it; if they'd meant anything less than 47 CFR 97, they'd have said "this section" or "this paragraph", and if they'd meant anything more than Part 97, they'd either have been specific ("Nothing in 47 CFR shall...") or included a general prohibition against legislation ("No law shall be passed...") which would be far beyond their power to enforce.

Just because 47 CFR 97 doesn't prohibit it doesn't mean there aren't other rules prohibiting it.

Put another way, if it read "Nothing in these rules shall prevent the operator of an amateur station from taking permanent possession of a radio not owned by him", few people would think it's open season on the stock of the local ham store or believe local laws against theft had been superseded.

But I still say the best way is to participate in a local emergency services group where you can get privileges for the local police frequency. Our group is well enough respected by the village police that we don't even need the privilege, because they also monitor our secondary frequency. (The fact that they get to use it as a BS channel doesn't hurt. :-) That came in handy last year when a dope ran a red light and broadsided my car, blocking a major intersection with two immovable vehicles; even though it was in a neighboring village, I called ours and had police on the scene within two minutes. (And yes, I did try other frequencies first, though I wasn't required to by our rules.)

I can't think of one with those specs. There are a few wideband amps
that have the gain, but not the cheap MMICs. The most gain I've seen in
the MMICs is about 20 dB. You will probably need two MMICs to get the
numbers you want. You will need to bypass the heck out of the power
supply because they will oscillate quite well at low frequency through
that path.

I hope I don't start up the old argument about 'evil' contests. But on contest weekends, I find WWV more interesting to listen to than the rapid "traffic" of contesters. I've only been in the hobby 2 years, but I wonder whether there were always this many *&^%$ contests, and also wonder, if the frequency of contests has changed appreciably over the years, what has caused that? Is it a hardware issue?

Unless you need to pass traffic, or are in a CW speed contest at a hamfest, you don't need to copy on paper at all. For CW ragchewing, copying in your head is much easier and more enjoyable. You copy in real time just like talking. After awhile you will start hearing words as units and not the separate letters. At home I sometimes take short notes on the conversation so I can remember what to reply about, but even this is unnecessary if you work break in. Once you have this ability then try CW mobile for a great way to make a long trip shorter.

For anyone who is interested in using a DX cluster via the internet. Feel
free to telnet to

k7co.j7.net

It will ask for your callsign and password

If you are not familiar with how to telnet. Sign onto your internet provider
and then
click on the Start button, then click on run and in the dialogue box type

telnet k7co.j7.net

This will work if you have loaded TCP/IP.

This cluster is based in the San Francisco Bay Area so the spots may or may
not
be relavent to you. This cluster is linked to the west coast spotting
network.

When you login in type help and you can get some basic information

or you can type

sh/dx

or

sh/wwv

or

sh/u

to get started.

any questions feel free to email me at

cluster@vcr.com

>You really had to be stupid.

Well, in four years I guess you would have run into only a very few.
In 20 years I ran into quite a few. There was one time, I was
between career fields, going from a 27270 to 496X0, medical reasons,
that I was put in charge of four individuals who were being processed
for discharge at the same time and for different reasons. I guess
they were pretty stupid. One of them was busted for being AWOL and
running a police blockade....he damaged a couple of cruisers...was
processed out of the Air Force and handed over to the local law
enforcement. Another one was always getting into trouble and the
final straw was calling Domino's Pizza from the control tower and
having pizzas delivered all over the base housing area. I'm laughing
right now, it was stupid but funny. He wasn't aware that the
supervisor's telephone in the tower, which was never recorded, just
happened to have been wired in to the recording system that same
weekend and the cheif of the radar facility just happened to be
monitoring the recorder..talk about bad luck. The other two were just
as stupid. So you're correct in the you had to be stupid...

Then there were times where timing just wasn't right. I know someone
who couldn't get a CJR (Career Job Reservation) in Security Police
because they just had plenty of cops. I am good friends with the
guy's father-in-law and just happened to be browsing the web one
evening when I found a general who had the same last name as my
friend. It is not a very common name and there was a very good
possibilty they were related. I asked my friend why not write to the
general. He did. He never got a personal reply back from the
general. But, at his son-in-law's going away party a female Chief
Master Sergeant came up to the son-in-law and told him they had a job
for him if he wanted it. That was two years ago, and the guy is still
in the Air Force today. I'd call that lucky.

What does this have to do with ham radio? Not a cotton pickin' thing!
Ain't it great? :0D

You're a pea brain...it's "asinine." I spelled it the way you did but
then went to www.dictionary.com and got the correct spelling. Yes, I
use a dictionary much of the time, even if it's an online dictionary.

>> Huge? Lemme see, I got $12,000 the first time and $14,700 the second

>
>I call that huge, I would have got $30000 in today's dollars.

There was a $12,000 limit the first time I re-upped. I don't recall
what the limit was raised to the second time and then the third time I
was almost at the limit of Zone C so didn't get near as much and the
SRB (Selective Reenlistment Bonus) was decreased too. Guess I just
happened to get into the right AFSCs.

>The USAF was much better than ham radio as far as total quality.

I can agree with that.

>>(Anyone notice a trend
>> here) It's also too bad you are having such a bad experience with
>> life Burt...you actually get out of it what you put into it.
>> GIGO....OM.
>
>I have a pretty good life. No garbage in or out.

I wish you would prove that.

Cheers OM. BTW, I did not make it to the Cape back when I said I
would be going there. I was out-voted and we went elsewhere. C'est

la vi. I'll make it there some time. Last time I was there was in
1972, but last year made it to the canal.

I got my ticket in the Air Force. Went through a Novice class at
K5TYP and later served as president of K5 "Tiny Yellow Polka-dots"
from 1982 to 1985 at Keesler Air Plane Patch, in Biloxi, Mississippi.

Subject: ** FLEA at MIT ** Sunday October 18th Cambridge MA
Summary: Buy Sell SWAP Ham Radio Electronics Computers 9AM - 2PM

This coming Sunday... The Season's LAST....

*** !!!! In our Traditional GARAGE and lot !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday October 18th 1998
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

In a message dated 98-10-12 00:16:28 EDT, Burt Fisher whined:

<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<
You think so? Maybe you do. The point of calling me pea brain is?
You raise your self up by putting others down?
>>

That's exactly how Mr. Fisher makes himself feel better. He has already admitted here that the reason he belongs to ham newsgroups is that he needs to feel that he is better than SOMEONE, so he picked a group that represents less than 0.02% of the US population.

I think it's part of a 12 step program he is in for people with very low self esteems.

What a load! :-)
It might be true for a lot of people, whether they're hams or not, but so what?
You're saying that hams are cold, lifeless beings whose only desire, and therefore lot in life, is the chasing of elusive DX and contesting?
Simply by "virtue" of being hams? A crock of dogmeat, funny man.
I know many hams who have wonderful marriages, and relationships, and have stood the tests of time a tribulation far better and with more resilience than many folks who are NOT AT ALL in the radio hobby.
No, I am not a ham op. Yes, I am in this room frequently to get questions answered and have some fun reading other's conversations about radios, etc. Is your little "story" funny, or accurate, or even to the point, ANY point, of this room? Resounding "no" will suffice here, I think.
If you think that all hams are beneath you, or do not have any interest for you, then what in God's name are you doing in an amateur radio room? Do us all a favor and leave.
Mike in MO.

Well, I wanted to invite one and all, whether you are a Ham, a Scannist, a CBer, a SWLer or just interested in communications or the Hamfest attmosphere. Please attend this GREAT Hamfest. It is in my opinion by far the best Hamfest in the SouthEast. The only one that I know of that is better is Dayton, OH! Please attend.... it is the Tri-Cities Hamfest & Computer Fair (Serving Hams for 17 years) Saturday, October 17, 1998! Prizes are.... 1. Icom IC-706 2. Cushcraft R7000 3. Ultimeter 2 weather Station 4. Alinco DJ-G5TH 5 MFJ SWR Analyzer. Held at the Appalachian Fair Grounds in Gray, TN. Take Exit 57 off of I-81 towards Johnson City, then take the Gray Exit 42 off I-181 and follow the signs. Talk in 146.97 & 146.79. Gates open at 7:00am and Doors open at 8:00am. I hope to see you all there!

>go for it...
>
>... why are we failing to comment on his current illegal operation?
>
>Just curious.
>
Curtis-
I appreciate your consideration of my "ham-ability", if you will! :-)
I guess I am, technically, breaking the law by using a radio not originally built for use on the CB bands. And by modifying it (well, the person who sold it to me, a ham, did the actual mod years before I ever knew him) I have invalidated the type-acceptance.
But these are trifles, really. Since one does not need a license to transmit on CB, than the legality is not about the usage, but about the equipment. And as I stated earlier, I absolutely do not use more than 5 watts out, MAX when I transmit on it, which is actually rare. I mostly listen. You can believe this or not, it does not matter to me. So, while I am using a radio on CB bands that was not type-accepted to so use, there is nothing else in any semblance of reality that says that what I do, when I do it, is illegal.
I stay in the legal 40 channels when I transmit, with full legal power for AM and SSB (RMS and PEP, respectively).
So, beyond what I have just stated (and about which I don't want to get into a big drag-out) what is it about my "operation" that is "illegal"?

Just curious.

Mike

Correct.
But they are required to show you are a man.

Please visit my World Wide Web Site, you have never seen a page like it.
You will see:

1. How to pass the A+ Certification
2. See Hillary do something naked.
3. A blond naked chic being held by a female ham!.
4. Take the Burt Poll, about Clinton ham spouses, girlfriends
5. Attacks against Burt K1OIK's opinion of ham radio in a national publication
for broadcasters
6. Burt's opinion on the First Affair in the White House with a picture of the
new fist couple.
7. The writings of me and others on ham radio, hear a typical ham contact.
8. The warm side of K1OIK, hear me speak, see me with famous people.
9. A test for your SVGA monitor
10. Pictures of me and my family.
11. Did common German's enable the holocaust?

I once was called by a DJ at WQRC-FM at 3 AM telling me a tower light was out and it was pouring rain. I asked why he called me and not the FAA, he said "I thought you oughta know." I called him back at 10 30 AM and woke him up at home to tell him I called the tower people. He asked why I called, I said, "I thought you oughta know."

729. 10 meter converson ah100 SSB HT Cherokee

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-14 00:00:00 UTC
From: k3jim@hotmail.com
Message-ID: <OZ9V1.584$zR4.186318966@newsreader.digex.net>
Source record: 160156

I just purchased an AH-100 CB to be coverted to 10 for the comming solar cycle. I was able to covert the thing to 10 ok but the conversion info for the so called 5khz split and rit xmiot seem to be wrong.

What his rig needs is 1 khz increments and a open rit . Any ideas??? There is one web page with some wrong info that mentions a CSRE button this is actually for another rig. How bout the Cherokee people comming out with a real 10 meter version with FM ???

731. Misuse of Amateur equipment in Radio Shack advertising

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-14 00:00:00 UTC
From: bruce@pixar.com
Message-ID: <703b3v$au8$1@atlantis.pixar.com>
Source record: 160158

In short, this is possibly a case of people using Amateur equipment without a license, and for business use, in Radio Shack advertising.

Today, I received a Radio Shack advertising "magazine" called "connected!" in the mail. The feature story is "The Team That Conquered Kangchenjunga" (a mountain in Nepal). The substance of the article is that this team used Radio Shack two-way radios. The radios shown are obviously Amateur units and are displaying frequencies in the two-meter band. However, this advertising never mentions that these units require an Amateur license, there is no mention of the mountaineers being Amateur operators, and I don't know if the 2-meter band is even authorized in Nepal.

The advertising describes both emergency communications and routine communications during the ascent. The team appear to be professionals, and appear to have recieved equipment and monetary support from Radio Shack.

I've forwarded this report to my ARRL division director.

Thanks

Bruce Perens K6BP

I have 8 MSA1023's for sale. The price is $15 plus shipping ea. A single one of these 25ohm mmic's should give you around 500mW. They can be used single ended with a 2:1 SWR or with a transformer. Or in push pull using a transformer or narrowband balun (coax).

I also have some Motorola MHW8242 Hybrids (pdf available at mot.com). These hybrids will do at least 500 mW from about 10 MHz to 1.3GHz. The units I have are brand new and come from a high frequency batch. If I recall correctly they have over 23dB of gain from 20 to 1.3GHz. They do over 1/2 a watt everywhere. Price is $20 each. They opperate from 24V, but still do power when used at 13.8V.If interested please email me at:

743. North Dakota DXpedition canceled

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-14 00:00:00 UTC
From: Cal Kutemeier <ckuter@ix.netcom.com>
Message-ID: <700p79$8rh@sjx-ixn9.ix.netcom.com>
Source record: 160216

The 10/17 and 10/18 mini-"DXpedition" has been canceled due to poor expected propogation. Maybe next year.

>"I don't inhale"

As I said earlier, I don't care if you believe me or not. That's your problem, if you want to waste your time thinking a total stranger is a liar. Have a good life.
I was just responding to Curtis' question, and he and I don't have to agree on everything, and I don't feel like he was insulting me, nor I him. Let us have our discussion and don't read it if it's going to do nothing for you but drive you to distraction or react like a smart-ass.
Comparing me to Clinton. That's supposed to hurt? Please.
Mike

>> transmit on the local police channel is not part of one's "amateur
>> station." That same HT set to transmit within an amateur band is
>> now part of one's "amateur station." Shifting a radio's transmit
>> frequency off an amateur band and keying the transmitter means you're
>> no longer under the protection of Part 97.

>I disagree with your reason, though I agree with your conclusion. They're
>very explicit about "ANY available means of communication". However, 97.403

S 97.403 Safety of life and protection of property.
No provision of these rules prevents the use by an AMATEUR STATION of
any means of radiocommunication at its disposal to provide essential
communication needs in connection with the immediate safety of human life
and immediate protection of property when normal communication systems are
not available.

Reading it in the legal sense, you again must ask, what means of
radiocommunication would be at the disposal of an AMATEUR STATION?
(FCC's definition) Again, an HT set to transmit out-of-band is not,
in the legal sense, at the disposal of an AMATEUR STATION.

The FCC's definition of AMATEUR STATION does not include my VHF
marine band transceiver, does not include my boat's CB radio, does
not include my Tempo HT which is designed to transmit from 150.000 to
159.995 MHz. If I operate those radios, I do so not as an AMATEUR
STATION, but rather as a station in another service.

"... any available means of radiocommunication..." *must* be prefaced
with AMATEUR STATION, keeping in mind the FCC's definitions of each and
every word.

Meadowlands Communications is conducting an auction of excess cellular inventory. The following items are available by Lots. All cellular phones are in good condition - inside and out - and have been tested. This Auction will end on Monday, October 19, 1998. Please E-mail or call 201-896-8770 with Lot Number and Bid before 10/19/98.

Quantity Description

LOT 1
All cellular phones in this lot DO NOT have batteries or chargers. USED. NO keypad wear.
2 Motorola TeleTac 200 (Model 76661WAKBA) EE3 Charcoal Gray
2 Motorola TeleTac 250 (Model 34061WAKBA) EE3 Charcoal Gray
1 Motorola DPC550 (Model 45683A) Chip 9308 Charcoal Gray
5 Motorola DPC550 (Model F09HLD8415AG/BG) Chip 9308 Charcoal Gray
2 Motorola DPC550 (Model F09HLD8415AG/BG) Chip 9308 Light Gray
2 Motorola DPC550 (Model 34013WARSA) EE3 Chip 9630 Charcoal Gray
2 Motorola DPC550 (Model 76090WARSA) EE2 Chip 951b Charcoal Gray
2 Motorola DPC550 (Model 76248WNFSA) Chip 951c Charcoal Gray
1 Motorola DPC550 (Model 76432NAFSA) Chip 951c Light Gray
1 Motorola DPC550 (Model 76438WARSB) EE3 Chip 9563 Charcoal Gray
3 Motorola DPC550 (Model 7658WAREA) EE3 Chip 961c Charcoal Gray
2 Motorola DPC950 (Models 76242NAFDA/76251WNFDA) EE2 Light Gray
2 Motorola DPC950 (Models F09HLD8346AG/ F09HLD8443BG) EE2 Light Gray

LOT 2
8 Motorola Desktop Chargers (Old Style) SLN-5039A NEW IN BOXES

LOT 3
8 Motorola Desktop Chargers (New Style) SLN4321A NEW IN BOXES

LOT 4
2 Power supply Adapters SPN4027A USED
2 Power supply chargers SPN4352A NEW IN BOXES
(Allows you to charge battery by connecting to the accessory port)

LOT5
14 Nokia 100 Cellular Phones w/o battery. (2 do not have antennas). LOOKS NEW.
13 Nokia BBH-7S 800mAh batteries for the above units. USED.
2 Technophone EZ400 cellular phones. LOOK NEW
3 Wall Chargers AEC-3518 for above units.
1 DCH-1BL Desktop Stand for the Nokia 100 to be used with AEC3518. NEW
1 User Manual Nokia 100 NEW and UNUSED
1 User Manual Technophone EZ-400 NEW and UNUSED

5 Empty Manufacturers Boxes Nokia 100 (Various Conditions from ripped to new)
1 Empty Manufacturers Boxes Techophone EZ400 (Some packing stickers on it)

LOT6
2 Technophone 405 cellular phones w/antennas, w/o battery. USED w/wear on keypad buttons.
5 Technophone 415 cellular phones w/antennas, w/o battery. USED. GOOD CONDITION.
1 Nokia 121 cellular phone w/o antenna, w/o battery. USED GOOD CONDITION
7 BTH-2ST 800mAh thick batteries for above cellular units. USED.
2 BTH-SLT 380mAh slim batteries for above cellular units. USED.
2 Technophone 405/415 screw in antennas.
1 Technophone 405/415 screw in stub antenna.
2 User Manuals Technophone 415. NEW and UNUSED.
1 User Manual Technophone 405 NEW and UNUSED.
1 Quick Reference Guide Technophone 405 UNUSED.
1 Empty Manufacturers Boxes Techophone 405 (Some packing stickers on it)
1 Empty Manufacturers Boxes Techophone 415 (Some packing stickers on it)
1 Tandy CT-350 cellular phone w/antenna, w/battery. USED POOR CONDITION.
1 DamondTel (Model MT-796FOR6A) cellular phone w/antenna, w/FZ-976A battery, w/TRC-700A charger.

You should get at least US $100 if you haven't used it and it's in
mint condition.

I am following up your article in rec.radio.swap and
rec.radio.amateur.misc. Someone may contact you at
old-pimp@webtv.net.

It's a 2m ham radio and if you aren't interested in ham radio, the
best thing is to change your rig to quick cash.

>promoted, the commander got riffed

I hated when they did that. I almost had the same thing happen when a major called us all into his office, there were eight of us, and reamed us for not signing up to go to the squadron dining out. I stood up and told him that I didn't believe his threats of giving us more work, etc. were legal...he told me I was entitled to my opinion. Since I had already had my retirement approved I had nothing to lose so didn't care what the man would try to do to me. Damn idiot put me in for not only the Air Force Achievement Medal but a Commendation Medal and both of them came back approved. Then a Meritorious Service Medal on top of that...I did withdraw my congressional....go figure.

>Ground radio repair, yes.

Ever work on the TRACALS equipment?

I pissed off this one 304, Bruce, ...he chewed me out for repairing a microphone in the control tower one mid shift. Told me that was HIS job. So, next mid shift at 3 o'clock AM I called NCMO and reported that one of the indicator lamps went out on the FRC-19 console and that it put us in the RED because we couldn't tell which radio was selected (we really could) but that got Bruce's ass in there out of a sound sleep. He never chewed me out again after that. We were both two stripers at the time.

>> I wish you would prove that.
>
>My daughter is proof, straight A, SAT at 1430, in Austria now as an exchange
>student, owe no money to anyone, own house and cars outright etc.

My son just took his SATs. We'll have to see how his went. You have
a right to feel proud Dad.

sounds like it's checking the priority channel (every 2 seconds or so)
i think you'd have to use "hold" on the channel you want to override
the priority checking (i think)

i think if you hold the "lockout" (delete?) button down for
2 (or is it 5 seconds) you will hear a "beep beep". this is
the procedure to release all locked out channels.

if this don't work - maybe find a operator's manual . . .

Manuel,

The call in the movie originally *was* to be W9GFZ, in honor of Grote,
but got changed to W9GFO somehwere in scripting.

I have found that Grote is still alive, living in Tasmania, but I don't think
he is active in amateur radio any longer. Perhaps some of our VK7 friends
would know for sure?

> the character being based on her

Grote Reber is a man, a radio amateur who in the 1930's invented
radioastronomy in his back yard in Illinois.

The callsign used in the movie is a "mini-tribute" to him, but the
female character played by Ms. Foster is not based on him.

He built the world's first radio telescope (a 31 foot tiltable paraboloid) in
his backyard in Wheaton, Illinois in 1937.

From 1947 to 1951, Reber was employed at the National Bureau of Standards,
but beginning 1951, he became self-employed with his research in Hawaii and
Tasmania, Australia being supported by the Research Corporation. His interests
included mapping of the background radiation at 1-2 MHz, Cosmic Ray
studies, dating of Aboriginal sites, and botanical studies.

He received an honorary Sc.D. degree from Ohio State University in 1962, the
Bruce Medal of the Astronomical Society of the Pacific in 1962, and the
Jackson-Gwilt Medal of the Royal Astronomical Society in 1983.

> CW mobile for a great way to make a long trip shorter.
>

What you need to do is train the brain to copy behind. This entails forcing it to not immediatly respond to what it is hearing. Example, while listening to a comfortable speed, do not write it down until about 2 characters later. Dont worry about accurate copy, at this time. Keep doing this and gradually increase the gap, and write it down after 4 to 5 letters have gone by.

Gradually your speed will increase and your copy behind ability will start showing it's stuff. After you get a solid copy around 28, you will fine that writting it down to continue with this technique will not be necessary.

Eventually you will start to copy entire words and short phrases. And one day you will be pounding the brass and watching the TV news and conversing with the XYL, all at the same time. And you wont miss a thing. Have fun, CW is a art.

That's the U.S. Army for you...nice to see my tax dollars at work for people who can't even coordinate their own communications when they go to another town. I'm beginning to see why we got our asses kicked so bad in Somalia back in 1993 based on stuff like this and some other things that I have heard from people who have been in the Army.

Summary for english readers (deutsch unten)
Invitation and schedule
for 7th "Rheintal-Electronica"
exhibition, fleamarket, congress on Amateur and CB-Radio, Electronics,
computers at
Durmersheim (near Karlsruhe) Germany
Date/Time: November, 7th 1998 9:00 a.m.
Telephone/Faxnumber/snail-mail-Adress see below

deutsch:

Hallo zusammen,

Hier nochmal die Terminankuendigung und das aktualisierte Tagungsprogramm
(Stand 12.10.98)

7. Rheintal Electronica 98 (Funk & Elektronikboerse)

Datum: 07. November 1998
Wo : Durmersheim (Kreis Rastatt) suedlich von Karlsruhe
(Baden-Wuerttemberg/Deutschland)
Wo genau: Haardt-Halle in Durmersheim
Beginn : 09 Uhr (MEZ)
Ende : 17 Uhr

Funk-Einweisungen / Radio Assistance
CB-Funk : Kanal 15 FM (27.135 kHz)
Amateurfunk: 145,500 MHz F3E
Ausreichend kostenlose Parkplaetze mit kostenlosem Bustransfer zur
Ausstellungshalle! Schilder beachten!

Auf dem Programm:
- privater An- und Verkauf von CB-Funk und Amateurfunkgeraeten,
Computer, Software, elektronische Bauteile und Zubehoer
- Vorfuehrungen
- Deutsches CB-Funkmuseum
- Haendler-Ausstellung

NEU: RegTP (Infostand) ist leider verhindert :-(
(aber Kontrollen sind moeglich!)

- Vortraege und Referate (aktualisiert!)

10:00 (RaumA) Packet-Radio
Karl H. Ilg (DK2WV)
10:00 (RaumB) Funkbetrieb im Urlaub mit QRP/QRO

Peter Rachow, DK7IH
11:00 (RaumA) Neue Antennen (Amateurfunk, CB-Funk, LPD, FreeNet)
Helmut Bensch DL4KCJ

In the Spring 1958 Callbook, K6GW is listed as Nilie E. Nofrey, 11000 Burnet Avenue, San Fernanco. In Summer 1961, K6GW is listed to same at 18419 Erwin St., Reseda. It is probable that this person was the only one to hold this call. It was extremely rare for FCC to reissue in those days.

782. Advice

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-15 00:00:00 UTC
From: Fred Hamilton <fhamilto@greenapple.com>
Message-ID: <705gejjno1@news2.ee.net>
Source record: 160106

I presently own a Galaxy DX 44V and am considering the purchase of a Ranger RCI-2970. Anyone have any experience with this radio? Does it offer the same number of channels or frequencies as the Galaxies? Is there a good talkback, echo mike (that has the channel up/down buttons) available for it? Would you consider the Ranger radios to be superior to the Galaxies?

Thanks,

Fred Hamilton

Tom:

Have you tried the Outbacker without the spring to see if that is
the problem?? Personally I don't like thos silly springs as they can
generate alot of noise in the receiver whilst rolling down the road.
I've run HF mobile in an Escort station wagon with a screwdriver
antenna. You can check it out at http://www.qsl.net/ka6wke . The
complete installation is there as well as some other tips.

Nothing at all wrong with using a transceiver as a SW receiver. I don't
believe anyone on here would find fault with that. Of course, as hams,
having to obey the letter of the law, we would add "Fight the temptation
to transmit!"

Good listening,

During filming at the VLA, I pointed out to the Script Supervisor
that W9GFO was only one character away from being an historic
callsign. She listened with interest and made a note, but it
did not get changed.

There is more information about early radio astronomy, Grote Reber
and W9GFZ at:

From: Fred Hamilton <fhamilto@greenapple.com>
Message-ID: <705uht$7dd$1@news2.ee.net>
Source record: 160116

Some of you may have seen my post about the 2970 verses my Galaxy DX 44V. Well I made the decision. I ordered the Ranger RCI-2970 today. Not a bad price either, $335.95. Now for another question. I saw a mod in here for the 2950. Will it work with the 2970 as well? If not, does anyone have the mod for the 2970 to take it from 26MHz to 32MHz? Any other tweaks would be appreciated as well.

Thanks,

Fred Hamilton

Well, not quite, Drew. Where I live, it's 11 meters that's dying. One can listen for days without hearing any local signals on channels 1-40 (with the exception of channel 19, of course). Yet at any hour of the day or night, I can turn on a scanner and hear people talking on one or more local 2 meter repeaters. Funny how I used to hear lots of people talking on 11 meters a few years ago, but now many of the former "CB'ers" have gotten their amateur tickets and are talking on 2 meters and 70 cm. Sorta makes me want to put more time and effort into studying for my amateur license, especially when the people talking on the ham bands are interested in the same subject I am--radio. Just my nickle's worth. 73.

794. Radio Shack Extended Warranty Question?

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-15 00:00:00 UTC
From: dmitton@cybertap.x.com
Message-ID: <362683fc.120367@news.cybertap.com>
Source record: 160118

Hi all;

I have an odd question which is barely on topic ...

Has any one had experience with Radio Shack extended warranty?
Specifically the need for accuracy of the serial number on their
receipt to collect on that warranty should the need arise.

I recently purchased an HTX-242 2M. The salesman mis-typed the serial
number so it is wrong on the receipt. I contacted the store and they
took the correct serial number and the warranty number and said they
would correct it in the Warranty Departments computer tomorrow by
phone.

Should I have my receipt corrected in some way? Should I request some
form of confirmation that the information is correct?

I have very little experience with any form of repair work
at/through/from Radio Shack! I'm looking for any practical experience
anyone may be willing to share.

Thanks in advance!

"CB" is NOT amateur radio. You need a license for amateur radio. The radios you speak of are used in a great part to operate just outside the 40 channels allocated for the citizen's radio service. The amount of knowledge needed to run one is PTT.

I'm a new ham and I am looking to buy my firsy rig. However,
after passing the exams and earning my tech plus certification, I am still
not sure what I will do. What I mean is, I understand some of the options,
get a rig: mobile, ht, etc...but then what? Can anyone briefly summarize
the limits and realistic expectations of some of the available
operational configurations?
Initially, I thought I 'll get an ht, get on the air locally, work
the repeaters, you know--just get a taste of what's out there without
spending thousands of dollars that I don't have. It is my understanding
that what a good majority of hams shoot for are HF rigs, to allow for
worldwide contacts. My question: in lieu of the dollars to afford an HF
rig, will the ht or mobile be worth the money? By this I mean, is it fair
to assume, being a new ham, that there are sufficient local repeaters to
justify the expense of an ht to begin with?
Could anyone explain what might be a viable option for a new and
financially constrained amateur operator? Thanks.

I got my vanity call in April. I did apply online, and yes I had to print out a form to mail in. The form had a place for me to sign authorizing the Visa payment which was from my Arizona credit union. I sent it in and my card was charged 3 days later (No prior authorization or account of any kind) and the call was issued about 1 month later. (Not like a store where they don't charge until they ship...) Anyway I have told people I got my call online and payed with a credit card which is basically true. This may be what the guy meant. Although an FCC employee had access to my card number, it's highly unlikely that he would use it fraudulently. I don't even worry too much when I do give it on the net to known businesses. You are not responsible for paying for fradulant use of your card.(If you have a crummy bank they can charge you the first $50 but most don't) I would be much more worried about that waiter at the restaurant when he disappears with your card to pay the bill....

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 15/2330Z OCTOBER 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 15 OCTOBER AND FORECAST FOR 16 OCTOBER - 18 OCTOBER
STATUS INDICATORS SOL:GREEN MAG:GREEN ION: GREEN

1A. SOLAR SUMMARY
Activity 15 Oct: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number for 15 Oct: 131/85

GOES satellite data for 14 Oct
Daily Proton Fluence >1 MeV: 5.2E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 1.00E+08 (normal)
X-ray background: B2.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
16 Oct 17 Oct 18 Oct
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 16 Oct: 135/89

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 15 Oct: Quiet

Estimated Indices 15 Oct : A K
Learmonth 6 2221 2311
Fredericksburg 4
Planetary 5

Observed Indices 14 Oct : A K
Fredericksburg 2
Planetary 4 1210 0122

2B. MAGNETIC FORECAST
Date Ap Conditions
16 Oct 5 Quiet to unsettled
17 Oct 7 Quiet to unsettled
18 Oct 7 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
15 Oct Normal Normal Normal
PCA Event : No Proton/PCA Event In progress

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
16 Oct Normal Normal Normal
17 Oct Normal Normal Normal
18 Oct Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
15 Oct 109

Observed Australian Regional MUFs:
Darwin: Near predicted monthly values.
Townsville, Hobart: Near-15% above predicted.
Sydney: about 10% above predicted.
Christchurch: 15% below predicted.

Predicted Monthly T index for October: 96

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
16 Oct 110 Near to 15% above predicted monthly values for
the Australian region and about 10% below predicted
for the New Zealand region.
17 Oct 105 near predicted monthly values
18 Oct 105 near predicted monthly values

Hello everyone, I stumbled across a fairly nice site a couple days ago that had data sheets plus pictures for Eimac and two other manfacturer's tubes. I found it via a link from somewhere... thought I had bookmarked it but, now that appears not to be the case.

The specific part I was seeking was an Eimac 322, which was on the "mystery" site.

DOES ANYONE KNOW WHERE I WAS??? OR HOW I COULD FIND IT AGAIN????

807. CBRAMBO: told to play nice?

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-15 00:00:00 UTC
From: (unknown)
Message-ID: <36254a1d.5419464@news.mindspring.com>
Source record: 160170

Rumor has it that AOL has told CBRAMBO (Drew Durigan) to play nice on here or lose his account. I wondered why he hasn't been as vocal lately. By the way, he works as a MID-DAY 10am-2pm DJ at KJLS Radio. http://www.mix103fm.com/html/drew.htm to see his pudgy face. Every weekday noon hour, Drew plays your favorite requested songs. But itï¿½s done with a twist...everyday he'll play songs with a theme or songs all from a certain year. Ho Ho!!
ï¿½
Let me save you the trouble, Drew.

If you're so gullible that you'll condemn our 80+ year-old national
organization due to some questionable remarks you've read on (of all
places) Usenet, then you'd probably not be of much use to the membership
after all. (Too bad history questions regarding the amateur radio service
aren't part of the exam question pool.)

Three guesses:

1. A publicity stunt.
2. Isn't he the guy with all of the UFO talk? Hmmm, perhaps he discovered they aren't real?
3. Has he been kidnapped by aliens and replaced by one who scuttled his show to cover up? :-)

A year after the supposed event he now decides to leave ... does the name Ross Perot come to mind?

Someone correct me on any mis-statement of the facts here, please! :-)

Seriously, something just doesn't sound right here ... anyone get the same feeling?

Don't take it so bad. Everything must progress. No Amateur radio is not what it used to be, but some of us make the most of it, even though a large majority have taken over the airwaves. There are still contacts to be made, and fun to be had. Maybe it is you that has changed, or the love you once had for ham radio is now diminished or gone. But I will be damned if I will let a bunch of inconsiderate idiots with low IQ and lots of radio gear run me from the airwaves. Get some fire back. Be a man. Stand up for the hobby you love. Or just admit defeat and move on.

Tim KE4GDX

>Shack.
>
>I've forwarded this report to my ARRL division director.

If the frequency shown is above 146 MHz, and the rig is being used in Nepal, you have no idea if the Nepalese government has authorized usage of those frequencies by teams in the high country. Amateur radio equipment is relatively cheap and reliable, and if the Government of Nepal chooses not to require type acceptance or finds the amateur gear lawful, all you can say is, isn't that interesting. Remember that that worldwide allocation is from 144.000 to 145.99999999 MHz.

I also note that worrying about non hams going to Nepal and using bootleg radio shack gear is irrelevant. I don't understand this ability to criticize Radio Shack just because it advertises amateur gear. I suspect that most of the problems won't be solved by requirements that stores like Radio Shack check for an amateur license, after all I've been to plenty of hamfests where hams were willing to sell a piece of gear to anyone with the cash regardless of licensure too. This is a non issue unless of course store employees dial up the same frequency and try to demonstrate on the air, but I also suspect that most of the employees aren't interested in the gear that much.

Thank you, Tim, for the kind words. And don't worry, I've never thought that all hams are bozos, not even most of them. Some are, sure. But being a sometime CBer, I have to admit that the CB realm has MORE than it's share of bozos, and in a "s/n" ratio MUCH higher than ham, it seems! :-) I'm sure you'd agree!
And yes, the ears on the Kenwood are wonderful, particularly when I am trying to snag good tropical band stations. I know some folks in here don't like my use of the transceiver as a SW rig, since I am not licensed, and I will not argue with them. I'm not trying to stir up bad feelings.
Thanks for expressing your good feelings!
Mike

Hello,

Are all new Southern California Repeater Location Guides are on our
Web Page. Please pay a visit at http://www.rotd.com/worldxn

The "Original Southern California" Repeater Location Guide contains
the
most complete listings of all Open and Closed Repeaters for 2-Meters,
220 MHz, 440 Mhz, 1.2 GHz, 6 & 10 Meters in Southern California.

Visit before the end of next month and take advantage of our specials...

Thanks Again,
Jennifer R.

Welcome to ham radio, now forget about the 2m CB band and upgrade to HF.
Ham radio is HF. Now that said, here goes. A HT will give you limited
coverage at best, even with a small outside antenna it will be a pain.
You will need a way to power it or spend most of your time charging the
very limited capacity batteries. Or you could get a mobile. Then you
will need a power supply. So for the 300 buck mobile you will need a
300 buck power supply. All this is assuming you have a few repeaters
in your area that you could hit. Get on HF, thats real ham radio.

832. Internet vs Ham Radio

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-16 00:00:00 UTC
From: bshort@speedchoice.com

Al Waller, alk3tkj@qsl.net, wrote:
>I've had a license here for 37 years....I've owned it all and done
>it all. There is just no fun in operating any longer. Sorry to
>report but ham radio as it used to be died when the internet came
>along.

Perhaps this is taken out of context, but I have to take exception
to this type of thinking that I frequently encounter.

I do not beleive ham radio died. The internet can enhance enjoyment
of the hobby, but cannot kill it. Perhaps packet BBSs will die some
day with the availability of email, but amateur radio will survive.

For me, owning equipment is a necessary part of having a station to
operate, not the other way. No offense, but NOBODY can do it "all"
as far as amateur radio is concerned.

I can understand if operating on the air is no longer fun for you and
there are many who just homebrew or design etc and never really
get on the air, but this is distinct from the "death" of amateur radio.

I see some spending time with internet, but I think the amateur web
page design hobby is a passing craze. Not that everybody shouldn't
have a web page or whatever, but this like having a QSL card will
soon be taken for granted - it is a means to sharing information about
amateur radio, not a replacement for amateur radio, though there are
no doubt web page design hobbyists. The web page is a means
not the end for most hams, I think.

I don't bring all this up to just disagree, but what do others think?
How does amateur radio coexist with internet? I think trying to
ignore the internet is sure to fail, so what role is it to play? Surely,
some will be enticed to pursue it as a hobby, much as the introduction
of microcomputers 20 years ago, but in the long run, these computers
became a vital part of the ham shack. I view the internet the same way.

Amateur radio as I think of it is an awful big hobby to have done
everything.

833. New Ham-Policy list info

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-16 00:00:00 UTC
From: Charles Brabham <n5pvl@texoma.net>
Message-ID: <707oqs$ljv@enews4.newsguy.com>
Source record: 160046

In order to facilitate discussion of Ham-policy issues beyond the Code/NoCode debate which has dominated rec.radio.amateur.policy, QTH.NET has been kind enough to set up a new Ham-Policy list. This list is to be lightly moderated, in that almost "anything goes" except the problem which has plagued rec.radio.amateur.policy - the domination of the discussion by a Code/NoCode flamefest.

If you have Ham-Policy issues which you would like to offer for discussion beyond the C/NC debate, you may find it easier to get a meaningful discussion going on the new Ham-Policy list. If you only wish to discuss Code/NoCode, try rec.radio.amateur.policy

This notice will periodically be posted here at rec.radio.amateur.misc so that all participants including newcomers to the discussion will be informed of this option. Ham-Policy is not intended as a replacement for any existing list. It is a new, unique list with a clearly stated purpose.

The reflector at QTH.NET has several nice features including [Ham-Policy] in the subject line, availability of the list in digest form, and a nice Web-Based subscription/services server.

There are two ways to subscribe to this new Ham-Policy list:

By E-Mail, you can send a message to:

Majordomo@qth.net

with any title and the following as the message text:

subscribe ham-policy [Your E-mail address here]

as in:

subscribe ham-policy n5pvl@texoma.net

The second method is to use QTH.NET's nice subscription/services page at:

http://ns3.qth.net/

They have a great variety of Ham-related lists there, and the Web server is the best way to look them over (just make sure that your browser is capable of running Java scripts).

Nick,

You're in an area with good clubs (I've listed a couple below), so the first thing I'd do is get in contact with them, and ask similar questions. Not knowing you "interests", I can only give general suggestions, but here goes anyway....

I'd avoid an HT as my first radio. They are handy and all that, but their performance is pretty limited. As a "first" radio, I'd shop around for a used dual band (2M/440) mobile rig. This will give you good access to the local community of hams, and it can be used both in your car and as a "base" rig. You'll probably also soon find out you want to broaden your horizons, so for your second acquisition, hint around that you're looking for a reasonably priced used HF radio. Best place to do this is at club meetings, not on the air. People are reluctant to make offers to folks they've never met, but a lot of "old timers" at club meetings are often looking for a likely newcomer to help out, and have a serviceable "spare" radio under the bench at home.

Brian I agree with you 100%. To me the Internet is a tool, not a hobby. It was created to share information in an efficient and timely manner between government branches and learning institutions, and it serves this purpose very well.
But with the advent of Home PC's and some creative minds it has quickly became a hobby all it's own.

I use the Net as a place to get the latest sun spot data, look up and confirm QSL data, check out the latest software for the shack, so on and so forth.

I can't see the Net ever replacing Ham Radio, to me that is just absurd. It might for a small portion of Hams who are repeater junkies, but for those who enjoy the thrill of working that rare DX station or talking across country on UHF/VHF when conditions are right, IRC just seems like talking on the phone.

And as for "doing it all" in Ham Radio, I just hope to God I don't get there. I'm still having fun. :-)

It did for me. I still use 2m to keep track of a group of close friends locally but gave up on the HF bands years ago (and never moved up to General) because I wasn't strung out on collecting contacts. I wanted to TALK to folks, exchange info and ideas, but all everybody (it seemed) else wanted was a quick contact for a QSL. Answered a CQ from a YL living in the city I was born in. Appended a question to the usual QTH, Rig is, etc. but she was gone - to busy to even reply ....! Tinninitis makes code hard for me but I perservered til I was sure I could pass the 13 wpm test - only to find it'd been changed to suit the "QHT is, rig is then gone" crowd. I haven't had an HF rig hooked up for close to 20 years now and have forgotten most code. I may try again if the restructure gives me general priviledges but .....

Now, Dan, leave your biases at the door, please, when you are talking to a new ham/prospective ham. To you, 2M may represent the hordes of codeless appliance operators, but this guy deserves a more complete answer without the preaching.

Nick, first I'll say that some of Dan's points are excellent, despite his obvious disdain for 2-meter operation. More on that in a moment. If you have the money to get only one radio at first, the 2 meter band is indeed a worthwhile option. In most areas, 2M is the most popular band. Join a local ham radio club and see what the other members are doing. You probably want to get involved in whatever *they* do, whether it's 2M or HF or whatever.

On the 2M band, you can usually find people to talk with unless you are in a very rural area. Discussions will run the gamut from any and all aspects of ham radio to computers to other techie hobbies, on and on. (not to mention the old farts grumbling about their arthritis - all too frequent on ham radio :). You can get involved in transmitter hunting ("fox hunting"), service work (volunteer communications services for walkathons, bike races, parades, whatever), digital radio (packet, APRS) and lots of other stuff I'm forgetting. You won't get distances greater than about 50-100 miles on 2M without major $$ invested, however. At least not usually.

Dan always recommends a mobile radio, which is fine IF you are in one car a lot, or in a home (power supply necessary) or IF you need to reach more distant repeaters routinely. I prefer an HT, however - I can operate from ANY car or home, or hiking or on bike, boat, skis, whatever. For me, a mobile rig would be a stupid investment. An HT is, however, more range-limited, so don't count on one if you live deep in the boonies. Make YOUR choice based on YOUR likely operating environment. Drive one car a heckuva lot? buy a mobile. Otherwise - an HT. (get help fromn a local ham club if you are still confused about this choice).

Ultimately, a lot of the cool stuff in ham radio is on other bands. The HF bands, to Dan, are the epitome of ham operation, and they do offer the long distance contacts impossible on the VHF bands (at least not without huge bucks incested in an EME station). You can talk to Spain, Britain or France just about every day. Australia, New Zealand and Japan are now easily contacted with a modest station. I've talked to little islands in the Indian Ocean or the South Pacific, as well as an Antarctic research station. The possibilities are endless and the people are fascinating. it really doesn't cost all that much to get into HF - used equipment or homebrew gear is ideal for budget-minded hams. Read these newsgroups a while to get ideas.

Don't forget UHF and microwaves, too - they are every bit as much a part of ham radio as HF and VHF (earlier opinions notwithstanding). I am not qualified to tell you much about these, however, as I too am a relatively new ham, and have a lot of things yet to try.

Good luck, and hope to hear you one the bands.

I don't really know this guy, but he does remind me of those guys that
could not make it in society, and did even worse in the Military. They
just don't know how to fit into any sort of team or combined effort.
Pity, they usually end up lonely old duffs on wellfare, or in max
security prisons.

I can see where you're coming from on your opinion. I've been a General for
25 years and I get very disgusted with the immaturity that goes on 40
meters, especially in the evening hours. It sounds like they are grown men,
but they are real jerks, and are ruining our hobby. I've been using
Vocaltec's Iphone 5.0 on the web (with video and voice) and have been
talking all over the world. The sorry thing about it is, there is an awful
lot of jerks and perverts there too.
Again this is my opinion. 73's

HT's work fine depending on your area. Meet some local hams and find out about the local repeaters. In Iowa, you might find some smaller population of repeaters of high quality. Here in CA, there is a veyr high population o repeaters, I need a half watt and a rubber duck to hit most of them full quieting, but some are just not interesting to me, I needed to shop around to find the folks I like to talk to each day. I enjoy 2 meters a whole lot. A $300 HT will do very well if you treat it well.

HF is fun, too, that is where I spend a lot (most) of my time, but it is a different animal. Try out 2 meters and meet the local guys, find some who operate HF and do other stuff, and get to know what they are doing. Have fun.

The internet didn't kill ham radio for me, it just makes it quicker and easier to get information related to ham radio. There's lots of things to do on HF besides rag chewing; digital modes, slow scan, etc. I enjoy tinkering and building and that's ham radio too. I've never tried I-phone but I can't imagin that talking over a pair of wires rented from the phone company, via a computer purchased in the store, using software written by someone else could be as interesting as working around the world with a QRP rig and antenna you build yourself.

> 73, Brian KE7GH

I see that you are 39 years old Brian. By reading your post I would have thought you much older. Most of the hams I QSO are over 50. That should tell you something. There is not enough young people entering the hobby. One big reason IMHO is the internet. Why memorize a multiple guess test and study the code just to buy radios and yak on the air, when you can have all that and more on the internet. Further learning computer skills is valuable. I can't remember the last time I talked to a guy that had built his rig, or unless he is in the business knew how it worked. Teenagers these days are some of the best hackers. If the internet were around when I got started in 1957 do you think I would have been studying the code?? Not on your life. *Ham Radio* is not dead. The ham radio I knew in my youth is almost dead. The present day ham radio of communication ops will slowly evolve toward a CB type citizens radio. I don't think easier or no code tests will stop or enhance the trend. And I'm not sure it's bad. When I was young the government looked on ham radio as a ready pool of electronics types if needed in an emergency. That's laughable today. Today our computer savvy is what keeps our nation productive so the more young people that swing that way the better.

I'm 36 Jones.

The above is at the root of the problem. With such statements as "yak on the air" no wonder young people are not interested.

Being an elder statesman for the hobby you should work with the younger crowd and teach them that Ham Radio is not about "yaking" on a radio. There are a lot of wonderful things these young kids could do in the hobby with all the digital modes and the merging of computers and radios.

I feel the big problem is that the older guys are scared off by computers and unwilling to learn about them.This leaved the younger kids with no Elmers to teach them what Ham Radio is all about

Just think how much both young and old could learn from each other if they would just talk.

Food for thought!

last updated September 14, 1998

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, Tom Harker, and ARRL for providing some of the information.

OCTOBER 1998

Oct 4 (Sun), Wheaton, IL - Giant Computer show (see below). Dupage County Fairgrounds.

Oct 11 (Sun), Orland Park, IL Giant Computer Show & Sale (see below). orland Park Civic Center.

Oct 17 (Sat), Grayslake, IL. Computer Country Expo (see details below). Lake County Fairgrouds.

NOVEMBER 1998

Nov 22 (Sun), Wheaton, IL. GMRS Electronics Flea Market. Dupage County Fairgrounds. Sponsored by GMRS of Illinois, Inc. Admission $5. Kids under 12 free. Open for setup at 6:30 AM. Building doors open for buyers at 8 AM. Info: (815)756-3933 or (630)393-3937.

Nov 28 (Sat), Grayslake, IL. Computer Country Expo (see details below). Lake County Fairgrouds.

DECEMBER 1998

Dec 19 (Sat), Grayslake, IL. Computer Country Expo (see details below). Lake County Fairgrouds.

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (847)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held on designated Saturdays from 9:30 AM to 3:00 PM. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, and anything else in the domain of computers! Lake County Fairgrounds, Route 120 (Belvidere Rd.) & Route 45, in Main Exhibit Hall Building #1=9720,000 sq. feet of everything Computer! For a show map, exhibitor info, and discount coupon, visit the web site at http://www.ccxpo.com.

But what happens when there is a disaster and the phone lines are knocked out. How does computer knowledge help then? Actually, many of the computer savvy people today are software types only. They don't have a clue about the electronics inside the computer. If it quits working you take it back to the store where you bought it. Kind of like being considered an automotive expert because you know how to drive a car.

Al,

"Ham Radio as it used to be" died when....

...the Bureau of Navigation started requiring hams to have licenses
...the Navy succeeded in banishing us to 200 meters and below
...spark was outlawed
...phone came along
...Novices were created
...they gave 20 meters to the Generals
...SSB came along
...incentive licensing came along
...repeaters got popular
...Novices were given voice priveleges on 1296MHz
...No-code licenses started
...Barry Goldwater died

...whatever pseudo-tragedy you wish to blame it on......

> I have always been a ham of extremes....1961 1KW Am station, 1963 1Kw
> DSB station (1000w carrier modulated with 4KW of audio) It was the
> strongest radio signal coming from the US on any band worldwide. 1970
> 10Kw SSB on all bands......

Given that record of flouting the rules, perhaps it's a good thing
you've decided it isn't fun any more.

Hi,
Sorry to hear you gave up on HF ham radio. I have been using HF for
43 years now, and I am a ragchewer, DX or local. All on CW. There are
thousands of excellent ops out there, worldwide, who enjoy ragchewing.
I ragchew with stations, including DX (a lot of JA's) from my car, CW
mobile, in the mornings on the way to work. Sometimes I continue a QSO
with the same station on a subsequent day.
There are a LOT of different kinds of folks out there on HF. Too
bad you threw in the towel so long ago. Take another look, especially
on CW. Lots of ragchewing going on all the time.
I too cannot see how the Internet could ever replace ham radio for
me. I have been using the Internet for over 14 years now, since long
before it became commercialized. Direct person-to-person operating on
HF is a completely different thing than "using the Internet". The
former relies on operator skill and technical curiosity and interest,
and the latter is merely another communications and information
gathering tool, with none of the magic of radio. Apples and Oranges.

I think that's the key. The Internet is a tool for getting information quickly. It won't replace Ham radio, at least for me. Kids today seem to want everything quick and easy. Instant gradification. They can talk on the net with anyone anywhere in the world without ANY knowledge of computers at all. Not the same as talking to someone and HEARING their voice over the radio! Sad really...

No, it was the Mellon Bank which received your Form 159, not an
FCC employee. That bank handles all fee transactions for the FCC.

> rig.

Hans, you assume he even HAS a car. You also assume he has no interest in communicating from other places. People who recommend mobiles must just about LIVE in their cars. Me, I get out and around. You might hear me from a hotel room on my business travels, or from a hill deep in the Badlands while I'm fossil collecting. I already mentioned skiing, hiking, canoeing, camping, etc.

Nick - like I said before: Do you live in a car? or stay at home a lot? then get a mobile. Clearly your best bet. If you a bit more active, get an HT. Match your rig to YOUR lifestyle, don't base it on recommendations from people with clearly limited needs.

855. TEAC-3300 Schematics

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-16 00:00:00 UTC
From: robin@teleplex.net
Message-ID: <362bb5c2.31307518@news.teleplex.net>
Source record: 160068

Need a valid schematic and any pointers anyone has to offer.

I have a TEAC 3300 not a TEAC 3300S. Difference is 3 relays vs 7
relays and the 3300 has no remote / time input nor does it have a
remote control plug either.

Problem : When in REC or PLAY the feed and takeup reels do not turn.
The FF and FR both work.

K2 is a DPDT AC Relay that applies power to the Captsain.
K1 is a 4PDT relay that will not pull in at all.
And the Last Relay is K401 that is use to set the machine RECORD
funtction in operation.

I cannot get K2 to work at all. It does not pull in at all nor do not
know the require voltage nor where this is supplied from. I suspect
that this is the relay in question.

There are no other relays in the machine.

The machine will go into High Speed Wind and Rewind and go thru all
other functions with out problems. However the motors will not go
into low tension take up and feed when play /record is pressed but the
captsian motor runs just fine.

Need a schematic badly for this machine. I was given a TEAC 3300S
schematic but this will not work. This machine has over 7 relays in
it and as you can see my machine has only 3 relays. Is there any help
out there in cyberspace??

To all radio amateurs

SB PROP ARL ARLP042
ARLP042 Propagation de K7VVV

Solar activity was up a little last week, with the average sunspot number increasing 42 points to 95, and the average solar flux rising just over three points to 119.7. Solar flux is rising, and conditions should be great this weekend for the RSGB 21/28 MHz CW Contest. Predicted solar flux for Friday through Sunday is 135, 140 and 140, and the predicted planetary A index is 5, 5, and 8. With the rising solar flux, low geomagnetic activity and the Fall season upon us, 10 and 12 meters are good right now, particularly at lower latitudes.

Solar flux should begin to fall after next Tuesday, going below 130 again around October 24 and below 120 a few days later. The geomagnetic field is expected to remain quiet to unsettled.

VE9AA in New Brunswick reported that he and other hams in VE2 and VE3 reported hearing weak 48.25 MHz video signals from Europe around 1330 to 1430z on October 11. On October 14 WP4O in Puerto Rico worked LW5EJU in Argentina on both 6 and 2 meters.

Great news from the SOHO spacecraft. The mission is continuing to recover, and SOHO is even sending solar images again. Check the latest news and pictures on the web at http://sohowww.nascom.gov/ and also http://umbra.gsfc.nasa.gov/.

Sunspot Numbers for October 8 through 14 were 146, 125, 94, 68, 76, 70 and 86 with a mean of 95. 10.7 cm flux was 124.1, 123.5, 120.7, 118.9, 113.9, 118.1 and 119, with a mean of 119.7, and estimated planetary A indices were 17, 16, 10, 8, 6, 7 and 4, with a mean of 9.7.

One solution to riff-raff seems to be to rename the ARS to the Amateur Radiotelegraph Service and outlaw all modes except CW. However, I would still be against a Morse code exam.

Typical liberal twaddle. They're all for "freedom of speech"...as long as it's speech which they agree with. Otherwise, it's branded as "unpatriotic", "unlawful", "hate speech", etc., and must be silenced at all costs.

Ham radio is dying. The Internet may have speeded up the process, but it would have happened anyway. Today's kids just aren't interested in making beeping noises with their hands or listening to endless discussions about war stories and health problems by men old enough to be their great-grandfathers.

I think you forgot:
When the ARRL started representing Kenwood, Yaesu and Icom
more than they represent US hams.

When the ARRL makes policy primarily for self preservation as
a money gathering business, instead of being an advocate of US
ham operators.

When the ARRL started making decisions based on
ad revenue instead of what's good for US ham radio.

Joe

What Al really means, is that now that he has gotten old, and taken
from the hobby, and now he has nothing to return.

Rather than take all his hard earned education, and practicing skills,
and being a mentor for young kids, he decided to just burp in
satisfaction, and then say "they owed me, I didn't owe them."

You're a selfish bastard Al, and you must repent.

As an old ham,(47 years old, licensed ham for 32 years) I can relate to this thread. I "discovered" the internet a few years back and let ham radio fall by the wayside. To me the fun of ham radio was the challenge of making contacts. When I got my novice license, I was limited to cw, crystal control, and it was only a 1 year license. My first rig was a converted ARC 5 xmtr and a BC348 receiver. With only one crystal for the 15 meter band it was a challenge to make a contact --with anybody. As time went on, rigs got better and better and making contacts got easier until it got run of the mill to work whoever or wherever you wanted. Almost as easy as dialing a telephone.
Also, my main source of fun was tinkering with the equipment, building, modifying etc and the new rigs got so complicated with all the bells and whistles and so miniaturized that the average ham couldn't fix his own rig. We hams became appliance operators. Now, my fun with computers lies with building, tinkering and upgrading, my internet surfing usually is on the hardware newsgroups.
I am currently getting back into hamming, I bought a QRP rig and am working CW almost exclusively with a simple wire antenna..part of the challenge is there but its still not like the old days. I know very few young hams, most are old farts like me. If ham radio has a future 20 years down the road I don't know what it will be.
Another of my peeves is the cost of new gear. Computer gear has gotten dirt cheap but ham gear just keeps going up. Just an "entry level" station will set you back a couple of grand at least. I'm using a computer power supply to run my QRP rig...the 12 volt connection is rated at 10 amps...I paid 15 bucks for it new at the local computer shop. A 12 volt 10amp power supply from a ham radio outlet is about $100. It would be hard to spend over $2500 for a top of the line computer but a top of the line ham transceiver, antennas and accessories easily can go for $10,000 Of course part of the difference if there are a lot more computers sold making the costs lower, but the ham equipment manufacturers aren't hurting any.
Thanks for the soap box to air my 2 cents worth...

Source record: 160086

As much as I don't like taking sides...

CBRAMBO, as much as people talk bad about you on here, you may(I stress MAY) be correct on this..
I'm a 22 years old, I've had my license less than a year.. there are two "good" clubs in Richmond, and the age ranges pan out to something like this:
13-18 yrs: 3
19-25 yrs: 40
26-35 yrs: 150
36-54 yrs: 200
55+ yrs: 400

this is completely unscientific, but this is a true approximation... Now you see the problem.. During the "peak time" on repeaters, you hear old guys chatting, on CW, you hear old guys keying, on HF phone, you hear old guys ragchewing... Someone pass the Aspercream and Geritol, I'm getting a back-ache just listening..

Now this isn't necessarily bad, I was brought up to respect my elders(anyone with a decade more in front than myself) .. so I enjoy ragchewing with all "da-boys".

I do fully agree that amateur radio is dying and I'd like to see things done about it, not just bitch that it's dying..

And.. for the record, I don't think the internet has ANYTHING to do with it.. People use the internet because it is SIMPLE! (overall) .. And everyone is allowed on that has $20.00 a month..

Ham radio is a priviledge that must be earned, now it would be a good start to limit the code speed to 5WPM for general, but.. oh well..

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 16/2330Z OCTOBER 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 16 OCTOBER AND FORECAST FOR 17 OCTOBER - 19 OCTOBER
STATUS INDICATORS SOL:GREEN MAG:** RED ** ION: ** YELLOW **

1A. SOLAR SUMMARY
Activity 16 Oct: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number for 16 Oct: 131/85

GOES satellite data for 15 Oct
Daily Proton Fluence >1 MeV: 7.9E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 9.20E+07 (normal)
X-ray background: B2.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
17 Oct 18 Oct 19 Oct
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 17 Oct: 135/89
COMMENT: Halo CME observed 15 Oct 1000UT associated with a 27
Degree disappearing solar filament N19E10.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 16 Oct: Quiet

Estimated Indices 16 Oct : A K
Learmonth 4 2111 1122
Fredericksburg 3
Planetary 4

Observed Indices 15 Oct : A K
Fredericksburg 2
Planetary 6 1121 2322

2B. MAGNETIC FORECAST
Date Ap Conditions
17 Oct 5 Quiet
18 Oct 25 Active
19 Oct 18 Unsettled to active

COMMENT: IPS Geomagnetic Warning 34 was issued on 16 October
and is current for interval 18-20 October. Halo CME observed
15 Oct 1000UT associated with a 27 Degree disappearing solar
filament. Geomagnetic activity expected 18-19 October.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
16 Oct Normal Normal Normal
PCA Event : No Proton/PCA Event In progress

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
17 Oct Normal Normal Normal
18 Oct Fair Poor Poor
19 Oct Normal Fair Poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
16 Oct 83

Observed Australian Regional MUFs:
Darwin: No Data
Townsville: Near predicted monthly values.
Sydney, Hobart: 15% below to near predicted.
Christchurch: 15% below predicted with spread F 7-17UT.

Predicted Monthly T index for October: 96

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
17 Oct 100 near predicted monthly values
18 Oct 60 about 20% below predicted monthly values
19 Oct 75 about 15% below predicted monthly values
COMMENT: IPS HF Communications Warning 59 was issued on 16 October
and is current for interval 18-20 October. Halo CME observed
15 Oct 1000UT associated with a 27 Degree disappearing solar
filament. Depressed propagation conditions expected 18-19 October.

>Thanks in advance!

get your receipt signed by the RS. when you move (change RS
location), you need your receipt for warranty work... say when EWP
office is closed.

seems 242 doesn't break very often but 202 does.

I'm a REACT member with a 5-watt Uniden PC66, Rat-shack power supply and A99 antenna circa 30 feet off the ground. Ever since a wireless communications service installed nine antennas on a water tower some two miles away, I've been getting wacked every other second by this carrier that sounds akin to someone's thumb stroking a washboard. I contacted the communications service directly, played the tapes of the RFI for their engineers, and got "see no evil, speak no evil, hear no evil," and they told me it's a RFI they've never heard before, and basically said we can't be wacking 11 meters from 800 MHz. I asked them if they had a paging system installed, and they told me they'd look into it. Anybody with a CB radio that drives by that tower gets their needle pegged every other second by this RFI. The only company that occupies this site (old factory bldg) is the communications service, and their water tower antenna. Could somebody point me in the direction of some interesting reading regarding the above-mentioned RFI and how a wireless communications service tower could wack the 11 meter band for a three-mile radius? They said they're only putting out 100 watts...Any directions at all would be sincerely appreciated.

881. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-16 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <706e1t$oo3@news.Hawaii.Edu>
Source record: 160131
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH2PZ, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see
http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

>-art clemons-

And I shall add that most non-hams would not notice that the radio was amateur gear and/or tuned to part of the US 2M band. RS is just trying to make an appealing ad and draw folks in their store, once there if they ask about a radio the salesperson would most likely grab a CB or FRS radio or perhaps a scanner or SW - that is where the bulk of their 'radio hype' is aimed.

886. Use of credit cards at the FCC's web site

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-16 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <706l95$4mk@news.Hawaii.Edu>
Source record: 160136

A few weeks ago someone on here complained that after he'd used his credit card number at the FCC web site, many illegal transactions involving his card number began to appear; he outright accused an unknown FCC employee of commiting these crimes.

I spent some time at that site today and it seems one cannot use a credit card number online to pay any FCC fee; one has to print Form 159 and sumit a check or money order to the Mellon Bank. Only those who've set up a prior account with the FCC and Mellon Bank are allowed to pay online with a credit card.

I'm suprised no one here called that fellow's bluff; it would have been impossible for him to deal directly with the FCC regarding fee matters - he would have had to go through the Mellon Bank.

Every so often I do find myself feeling the urge to key up, but in reality I do not have the right antenna to do so, and would have to have a better tuning set-up to even get the Kenwood heard barefoot. So no fear of my keying up, at least not below or above the CB bands... And happy listening to you too! :-)

Its checking the "extender" channels for whatever state you selected, when
it finds
activity on one of them it will sound an alarm and the red "WARNING" lite
will
flash. To restore deleted frequencies, make sure the BCT-2 is not scanning
(open
the squelch) then press and hold the (DELETE) key until "CL" appears on the

display.

> software
>
> Rick KF7QZ
> kf7qz@gte.net

Although I stopped using the C64 for general computing years ago,
I still use it for Amateur Radio applications and experimenting.
They work great as dedicated controllers for remote-control
applications. I built a simplex autopatch out of one, and another
one runs the DIGICOM>64 TNC emulator package for packet. I have
boxes of Ham Radio software for my "commie", but haven't any way
to post it to the net at this time. There are DOZENS of Commodore
software archives, and hundreds of home pages, but none specifically
dealing with Ham Radio applications (maybe some day I'll fix that).
your best bet would be to try http://www.jbrain.com/
he has the DIGICOM freeware there, and might have other Ham
programs in his excellent archive. For info on how to transfer your
downloaded files to your C64, see:
http://rpool1.rus.uni-stuttgart.de/~etk10217/newbe.html

I suggest you check out the Commodore newsgroup:
news:comp.sys.cbm
and pehaps re-post your request for info there.

Could you be a little more specific as to the type of motion sensor you're using? Is it the common outdoor infrared plastic-pod type with the two floodlight sockets, or something else? I've used the outdoor sensors for years, and the only problem I had was with RF getting INTO the lights, and causing the lights to come on whenever I transmitted. A few line filters solved THAT problem. I have four units operating full time, and have even incorporated the sensor heads' electronics into my security system via moderate-length cable runs - and have never received so much as a blip from them on LF/HF/VHF.

Also, do they emit RFI in standby, when "in alarm", or both?

CW reception by computer has always been a difficult task with poor
results, whether done by sound card, a communications terminal, or a
HamComm-style interface. The trouble lies in the computers inability
to deal with the timing changes in the dot/dash/space intervals from
human-sent code. What sounds like perfect code to our ears is a
constantly changing stream of random intervals to a computer. Even
with the software that "learns" as it goes and adjusts speed,
transmisions that speed up and slow down only moderately can cause
the program to loose "lock" and print garbage.

The best way to evaluate your CW decoding system is to stay with
machine-sent code transmissions. Copy W1AW's code practice and
bulletins, and spend some time listening in the Maritime CW bands,
logging marker beacons and traffic lists. If you do not have success
with these transmissions, then you might want to look at changes

to your system. In the day-to-day world, decoding CW transmissions
by computer is little more than a frustrating way to waste some time.

Are you saying that only the HV section functions? I doubt you can find an exact replacement. According to my print you will need 5v for the filament and a small bias supply. You can likely find a 5v xfmr from say Surplus of Nebraska, or something like that. For the bias supply, simply get a xfmr that has a 110v winding and a 6.3 v output. Reverse it and put the 6.3 v to the 5v output and use the 110volt side as the output. It should provide enough voltage. Just an idea from a old homebrewer.

I agree that restraint should be exercised when an obvious troll appears,
but when a poster submits a libelous statement which can be proved false
I believe it needs to immediately be addressed, lest some readers take his
statement to heart (which, in fact, one reader did - he continued the
thread spewing anti-government verbiage).

Lucky for the sailors aboard our merchant ships, the FCC disagrees with
you. In the past, to get a job as a shipboard RO, one had to pass a
rigorous exam testing the student's electronics expertise.

Whether it be the maritime or amateur service, segregating operating
and electronics knowledge should not be encouraged.

895. ARRL and Yaesu software compatibility

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-17 00:00:00 UTC
From: lweil@whdh.oem.net
Message-ID: <70atcjemj2@stalker.oem.net>
Source record: 159946
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur

I recently purchased the ARRL Travel Planner software, which allows the user to create a list of repeaters for a specific area or route. This software then allows you to export the file, in what it calls a .tpe format.

I also have the Yaesu ADMS-1 programming software for my FT-50R, which stores it's files in what it calls the .rdf format. What I found is that the Yaesu software is not able to recognize or use the files created by the ARRL software, which is something I would like to be able to do.

Does anyone know of a utility that would translate a .tpe file to the .rdf format, or know of a work-around for this problem.

TIA for your help.

--------- Begin forwarded message ----------

From: Home.Peter.Casier@wfp.or.ug
Subject: Job opening for high speed data specialist in Uganda
Date: Sat, 17 Oct 1998 19:46:33 -0700
Message-ID: <00025570.CE21444@wfp.or.ug>

Guys,

I am desperate and need your help. We have a job opening for a high speed RF data specialist and can not fill it. Help us out. THis list might contain people professionally connected in this area. Forward this email to anybody anywhere. Any help is appreciated.

As you might know, our technical unit here in Kampala is working on the forefront of field communications of all United Nations agencies. We developped, amongst others, a regional Email network that is running completely independent of any public facility, based on HF (based on Codan modem) and VHF/UHF (based on packet) data comms running with a standard CCmail interface. The network is now covering 2,000,000 km2 and serving 76 bases processing 200,000 Emails monthly. For the total montly running cost of about US$10,000. We joined team with Unicef and others to dramatically bring down cost for all and assist communications with our staff in the deep field.

We want to start deploying high speed vhf/uhf datacomms to link close sites with full TCP/IP, to link up LANS and we are looking for a specialist in this branch to teach us own to do it and to deploy the first test site. We know the technology for this (high speed packet) exists, but we need a 2 months consultancy to get us going. The same consultant has the opportunity also to integrate clover 2000 into our network, and to develop a new system that connects palm/handhelds Email systems to the regional network via packet.

Below you will find the terms of reference. The job is open NOW, here in Kampala, Uganda and I need to fill it soon. The pay is quite good. And it will give the candidate to get a taste of Africa, and to get a tast of DXing from the 'other side'...

Sorry to use this list for this, but I am desperate.

(see TOR below)

73

Peter, 5X1T/ON6TT
Head Technical Support Unit

United Nations World Food Programme
Great Lakes Regional office.

TSU TCP/IP TELECOMS CONSULTANT
Terms of reference

I. Purpose:
The WFP Technical Support Unit (TSU), based in Kampala, supervises the telecommunications, information technology and electricity service in the Greater Lakes region, be it installation, maintenance, administration or training. The unit has successfully developed and deployed the DFMS (Deep Field Mail System) an HF radio Email connectivity system which is taken as the WFP standard. Since beginning 1998, a complementary short haul Email system, DFMS+, running over VHF/UHF packet radio has been implemented in the Great Lakes.
The TSU is now developing the needed interfaces (called DFMS Pro) to connect the different LANs via cheap and fast radio links. This will enhance `line-of-sight' IP connectivity as well as help us preparing for the deployment of Lotus Notes.
The second development project (called DFMS Lite) involves dismounted technology to connect roving mobile users within a limited area via Email to a local server. This technology could also be used to support distress position reporting via GPS equipment.

II. Duties:
A short term TCP/IP telecoms consultant should test, propose and install a prototype TCP/IP radio link as the new DFMS Pro standard, as well as a dismounted hardware prototype for the DFMS Lite standard. The consultancy will last for two months (October 15 to November 15 1998).

III. The tasks:
The incumbent will work in the Technical Support Unit, reporting directly to the Head TSU, concentrating on the following main tasks:

1. Develop a TCP/IP over Packet Radio (`DFMS Pro') prototype, including possible different configurations in both in hardware and software with the goal of linking up LANs and remote users via IP to a local LAN. The speed should be 57 Kpbs minimal can cost approximately US$1,000.
2. Package the technology into a field implementable and supportable system
3. Train both the TSU telecom and IT engineers in the installation and debugging of the system.
4. Install a first prototype in production by linking the WFP Kampala and Ntinda warehouse LANs
5. Analyse our current DFMS+ packet links and propose possible improvement
6. Deploy a prototype for full duplex DFMS+ systems using the current hardware.

7. Train the TC/IT engineers on AX25/KISS/IP packet networking 8.
Develop a proposal on the deployment of a true packet node
network (using FlexNet, TheNode or other software) in order to support
real networking over AX.25 in case WFP wants to build a higher speed
DFMS+ backbone for CCmail.
9. Propose and prototype a standard for the portable DFMS Pro
dismounted hardware/software, including support for Ccmail and APRS.
10. Configure and demonstrate Ccmail running over the Clover 2000 and
Codan 9360 radios
11. Any other related activity

IV Profile:

The incumbent will have the following profile:

1. University degree in telecommunications, electronic engineering,
network technology or computer sciences, or equivalent through
experience

2. Because of the limited employment period, the incumbent should be
fully conversant with TCP/IP, VHF/UHF high speed packet radio
technology and wireless LAN technology in general, LAN architectures,
JNOS systems as well as HF data protocols and LAN security.

3. Well organised, practical and precise.

4. Experience in training is a plus

> operation, we now arrive at the number 3 + 0.984 + 0.5 = 4.484; as a
> frequency in megahertz, that's outside the U.S. amateur spectrum.

Remember, Jeff, context is everything. This one should clearly be
"three point nine eight four point five," thus revealing all to the
truly discerning. Only hopeless mathematical Luddites could possibly
claim failure to grasp the dual decimal system of notation.

> Anyway, thanks for your encouragement and your instructions to figure it
> out on my own. I'll keep plugging away on it. ;-)

I have no doubt you'll "get it" eventually . . .

Speaking as a current user of said tapes (in process of studying for a Tech+ license; I've never been licensed), I'd have to say that they ARE good, at least for me. They're certainly making the stuff stick, when before it's been like water off Teflon. Multiple learning techniques are used, rather than just hammering the code at you, and in a week of work I've gotten the alphabet down well enough to receive at 5 and send at 7-8 (is it just me, or is sending easier?). Until I started with the tapes, I figured I'd just go for a Tech and pick up the code if I could; now I have an exam date set for 10/30 and am certain I'll be able to pass at 5. I'll be happy to post progress reports if anyone gives half a hoot.

> Admittedly, the QSO practice does not have enough
> variety within it, but I think we're comparing apples and oranges
> here; code-quick is designed primarily for learning code, it's
> *secondary* function is for improving speed.

The QSOs ARE very similar...how do they compare to what I should expect from the real test?

On a related note, after listening to random code it's wonderful how much easier words seem...I'm a crossword enthusiast, and catch myself anticipating one or more letters at the ends of words.

> Surely it's whatever works for you that matters; anything that helps
> people into learning CW has got to be good for Amateur Radio IMHO (but
> then, I'm biased !).

I've observed just enough of the CW/No-CW debate to know that I want to stay out of it. But learning Morse does not appear to have done me any serious damage.

No... $2000.00 is "entry level" when compared to a brand-new /\/\otorola
MICOM-2R ruggedized, milspec HF set with ALE
(Automatic Link Establishment), at $6500.00+ :-)

But then again, the MICOM-2R is fully type accepted for commercial use
and doesn't have to be "modified for out of band operation" ...

1.6-30 MHz in 10Hz steps, fully tunable for frequency from the
front-panel
Full DSP on transmit and receive, four selectable filters for both
transmit
and receive 2.4 KHz, 3.0 KHz, 500 Hz CW filter centered on 900 Hz, and
a 500 Hz low-speed data filter centered on 1800 Hz, digital
noise-blanker,
and digital syllabic squelch. The set is fully ARQ capable with a
dedicated
remote connector for a TNC..

Top of the line ham gear like the ICOM's with spectrum display can
also run about the same amount... $6000.00+

After reading the postings here on the "Internet vs Ham radio", I am
wondering why this issue is defined as "either/or". Ham radio and
the Internet are different animals and they both have their place.

I think that viewing communications as a tool kit of various
methods is better than getting into heated discussions as to
whether "The Internet is 'better' than ham radio" or vice-versa..

For example, I was part of a FEMA sponsored emergency exercise
here in the Silicon Valley area a few weeks ago and our San Jose
RACES unit was a major component of this exercise. Our operators
(including myself) were tasked with the job of shadowing the
exercise evaluators and observers and providing a comms network
so they could all communicate with one another.

Just because I was "RACES", did not prevent me from handing out
City-issue
handie-talkies that are on our City Channels, nor did it prevent me
from using either my City-issue Cellphone or my own cellphone in
order to get messages through to others.

Just like in "The Real Thing", you use all communications means
at hand and not limit yourself just to ham radio. In fact,
our State Office of Emergency Services considers "ham radio"
as part of a larger-scope context called the "Auxiliary Radio
Service" (ACS), and pools all of the resources of many types
of services together. They all have their place whether it is
ham radio, Internet, National Guard, State Military Reserve,
Red Cross, Civil Air Patrol, ARES, RACES, MARS. Caltrans, or other
services..

FWIW, just my $.02...

It's only a matter of "Thinking outside the box" :-)

By this I mean, is it fair
>to assume, being a new ham, that there are sufficient local repeaters to
>justify the expense of an ht to begin with?

As I understand it, details of repeaters appear in the ARRL Repeater Directory. This would allow you to get an idea of repeaters in your area. Depending on the height of the repeater and your location, expect a range of 20 - 100km from a handheld.

> Could anyone explain what might be a viable option for a new and
>financially constrained amateur operator?

I would suggest used HF equipment. A secondhand HF set should not cost a lot more than a new VHF mobile set.

HF generally has more variety of activity than VHF FM. For example, you can work across the city or across the world. Also the coming sunspot cycle means good conditions on HF between now and about 2003. Don't miss it!

You could also consider building equipment for HF - a very simple Morse transmitter for one band would cost around $30 to build.

More info on all the above (incl HF gear, VHF gear, homebrewing and projects) appears on my web page - URL below.

In a way, Ham radio can be conidered as "many hobies" under one name.
What one ham finds as fun and exciting, another might find dull.
Thus, each person finds what area of the hobby they find interesting.

The 2 meter band can be considered the starting point for many new
hams. Except for some remote and small towns, almost every populated
area has some 2 meter activity.

You may want to visit some of the ham clubs in your area. They can
be a great source of information about the hobby. Plus, they can
tell you what repeaters get all the action and when the Nets are.

You can purchase a single band, 2 meter HT for under $200 (new).
This would get you on the air. The 2 things you should purchase
with it are: (1) A repeater Handbook; so you'll know the frequencies
of all the repeaters in your area. (2) a 1/4 wave (or better yet a
5/8 wave) mag-mount antenna for the car. The small rubber "duckey"
antenna on your HT is the worst antenna for sending (and receiving)
a signal. A 5 watt HT with a rubber "duckey" is like a 1/2 watt HT
with a 1/4 wave antenna.

When you come on a repeater, please do not call "CQ CQ CQ ..."
We're not that formal on the 2 meter FM band. You just say,
"This is <your callsign> listening." Your first few times on
the repeater, others may or may not respond. In some ways, hams
can also be a shy bunch, so they may not respond to a new person.

The easy way to become known is to listen for someone to say,
"This is <their callsign> listening" and then you say,
"<their callsign> this is <your callsign>; the name here is
<first name>" You may want to take notes about who you've
spoken to, so that you can keep track of their callsigns and
names. After a while of making contacts that way, you'll
become part of the group.

Another way to become known on a repeater is to join in the
Nets. Some Nets are small and you'll get several chances to
talk. Other Nets are so big, all one can do is just give

your name, callsign, location, and say a quick "Hi".

Working a public service event is something I think every new ham should at least try. Not every ham will care for this, but many will find it fun. It might be an Air Fare, a race, or some other event; you'll do and see (or hear) things the general public won't. Most clubs help with events.

A Tech Plus can operate SSB voice on 10 meters. A few years back, we were at the low end of the solar cycle and 10 meters was more or less dead. For the next few years, we are on the up swing of the 11 year solar cycle. Lately I've made contacts all over the US and in different parts of the world on 10 meter SSB. The problem is that an HF rig is going to cost you more than a basic 2 meter HT. So, you may want to consider that for later on.

73,

Bob
KQ6WQ

FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 17 OCTOBER AND FORECAST FOR 18 OCTOBER - 20 OCTOBER
STATUS INDICATORS SOL:GREEN MAG:** RED ** ION: ** YELLOW **

1A. SOLAR SUMMARY
Activity 17 Oct: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number for 17 Oct: 135/89

GOES satellite data for 16 Oct
Daily Proton Fluence >1 MeV: 3.7E+05
Daily Proton Fluence >10 MeV: 1.5E+04
Daily Electron Fluence >2 MeV: 3.10E+07 (normal)
X-ray background: B4.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
18 Oct 19 Oct 20 Oct
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 18 Oct: 135/89

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 17 Oct: Unsettled

Estimated Indices 17 Oct : A K
Learmonth 12 3232 3323
Fredericksburg 11
Planetary 8

Observed Indices 16 Oct : A K
Fredericksburg 8
Planetary 4 1001 1122

2B. MAGNETIC FORECAST
Date Ap Conditions
18 Oct 20 Active
19 Oct 20 Unsettled to active
20 Oct 12 Unsettled
COMMENT: IPS Geomagnetic Warning 34 was issued on 16 October

and is current for interval 18-20 October.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
17 Oct Normal Normal Normal
PCA Event : No Proton/PCA Event In progress

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
18 Oct Normal Fair Poor
19 Oct Normal Fair Poor
20 Oct Normal Normal Fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
17 Oct 110

Observed Australian Regional MUFs:
Darwin: No Data.
Sydney: Near-15% above predicted monthly values.
Townsville, Hobart, Christchurch: Near predicted monthly values.

Predicted Monthly T index for October: 96

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
18 Oct 65 about 20% below predicted monthly values
19 Oct 75 about 15% below predicted monthly values
20 Oct 90 near predicted monthly values
COMMENT: IPS HF Communications Warning 59 was issued on 16 October
and is current for interval 18-20 October.

You mean, it's too bad he didn't run unlawful power or flout other regs only while getting DXCC endorsements or busting pileups in League sponsored contests.
It was the League, after all, that first devised the "Don't ask, don't tell" policy.

The rules, of course, are different for the rest of the saps who don't need to feed their yagis with 7/8" heliax.

We certainly owe the League a deep debt of gratitude for taking a leadership role in promoting ethical operating practices, without which the bands surely would have been full of jammers, users of foul language, and other lids who learned by example.

I work with marketing types from time to time, and they usually don't
worry about detail of this level. Once asked why we put a satellite
dish in the artwork on our website, as we don't have any satellite
related products. "It's there to show that we have wide bandwidth
datacom products". They tend to forget that some people will try
to extract more information than what the people generating it had
intended to be gotten.

Hi folks!
If you come over to my homepage and navigate your way to
the radio section and then go to the links you will find a great
completely free Anti-Virus program. The program has just had the
string definitions upgraded as of October 12, 1998. This will cover
all the terrible new trojans that have popped up over the summer.
Please feel free to explore all the other stuff that is non radio
related. Also, the Aussie HAP charts are a great propagation tool.
Take care, and I look forward to working you on the air.

Wayne the Ham <nospam@frii.net> wrote:

>You mean, it's too bad he didn't run unlawful power or flout other regs only
>while getting DXCC endorsements or busting pileups in League sponsored
>contests.

Pile-ups are an established form of communication on the maritime HF bands. Every six hours of the day, at 0000, 0600, 1200, and 1800Z, each and every ship at sea world-wide collects WX data and passes it to any shore station within range. While working at NMO I'd have two receivers scanning the calling bands (for example, 8 MHz in my left headphone, and 12 MHz in my right). If our CQ tape was running at any of the WX OBS hours the pile-up would make any ham DX station faint. Imagine every ship in the Pacific calling just one station (me at NMO) with this time-sensitive data. The technique is to catch one at a time, take his working frequency, and give him a number ("UR NR 17"); after lining up say, 30 ships, I'd take their WX one at a time. After working all 30 ships, I'd turn on the CQ tape again, and both headphones would be flooded with more ships.

A world-wide pile-up every six hours - and the ARRL had nothing to do with it.

(The CQ tape was a tape loop which keyed our 10 kW HF transmitters with the message CQ CQ CQ DE NMO NMO NMO QRU IMI AMVER OBS QSS 4 6 8 12 16 22 MHZ AR - sending that during the OBS hours was like attracting flies with honey.)

>It was the League, after all, that first devised the "Don't ask, don't tell"
>policy.

You might want to explain that a bit further; state the exact policy you're referring to and the date it was implemented.

>We certainly owe the League a deep debt of gratitude for taking a leadership
>role in promoting ethical operating practices,

You're correct; almost every League publication I own instructs us in gentlemanly operating practices. In the early issues of QST even The Old Man himself scolded hams for their bad on-air behavior. But all our League can do is instruct through the written word - they can't enforce.

>without which the bands surely
>would have been full of jammers, users of foul language, and other lids who
>learned by example.

Again, all the League can do is instruct - they can't enforce. On-air
behavior today just reflects society's behavior in general. Bad manners
breed bad manner. For example, your bitterness toward the League will
be picked up by a new ham with no knowledge of our history nor the
League's history, and he'll begin to bad-mouth the League only because
he read you doing so, just as you're doing because you read of someone
else doing so. You're one in a long line of dominos, being pushed by
the one ahead, falling on the one behind.

Enjoy the weekend,
Jeff KH2PZ / KH6

>Can anyone help with a circuit for a ctcss encoder?
>thanks bob mackie vk4swr

Bob, if you've got a well-stocked library near by, you should be able to find some circuits. Many of the ARRL publications have such circuits. Also look for a book with a title "1001 ELECTRONIC CIRCUITS" - it contains encoders and decoders within it. The most stable encoder will either use a reed, or a crystal as a frequency reference. Stay away from the older variable frequency encoder circuits which use a 10-turn pot to vary the freq'y; they're not stable over the long term.

HELLO ROD:
HERE IS THE BEST CODE SPEED BUILDING TAPES THAT I KNOW OF:
JERRY ZILIAK'S AMATUER RADIO SCHOOL KB6MT
2350 ROSLIA DRIVE
FULLERTON, CA. 92635
(714) 990 - 8442

IN ONE WEEK I WENT FROM 16 WPM TO 35 WPM. I GOT MY TECH PLUS IN SEPT. 1996 AND GOT MY EXTRA CLASS TICKET IN DECEMBER 1996. I WORK CW DX ON FORTY METERS AROUND 7,005kc. FROM 0300zulu TO 0500zulu. BECAUSE I USE CW I AM WELL ON MY WAY TO MY DXCC.....I HAVE 38 COUNTRIES CONFIRMED (qsl cards) NONE NORTH AMERICA , SOUTH AMERICA AND THE CARRIBEAN AREA.

THESE TAPES ARE A THREE TAPE SET THAT COVERS 10 WPM to 30 WPM, AND THEY TEACH COMMON ABBRIVATIONS USED DURING QSOs VIA CW, AND ARE REPEATED OVER AND OVER AGAIN AT SPEEDS UP TO THIRTY WORDS PER MINUTE. BELIEVE ME IF YOU ALREADY KNOW THE CODE YOU WILL BE SURPRISED AT HOW FAST YOU CAN COPY A QSO.....ISN'T THAT WHAT THE EXAM FOR CW ALL ABOUT FOR AMATUER RADIO. PLEASE STAY AWAY FROM THAT " CODE QUICK" STUFF..... IT DON'T HELP IF YOU ARE GOING TO USE CW FOR QSO.

AND PUT THE PENCIL AND PAPER AWAY AND DO A MENTAL COPY AT A SPEED JUST ABOVE WHERE YOU HAVE A SOLID COPY.

LISTEN TO W1AW CODE PRACTICE SESSIONS!!!!!!!

GOOD LUCK AND I WILL SEE YOU AROUND 7,005 KC.

73s AND THANKS
PAT GREEN
KC5WCC

HAMFEST October 25, 1998 - Lindenhurst, LI

GREAT SOUTH BAY AMATEUR RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST-COMPUTER SHOW - OCTOBER 25, 1998

LINDENHURST, LI - NY

On October 25, 1998 the Great South Bay Amateur Radio Club will again sponsor an indoor Hamfest-Computer Show. The location will be at the:

Knights of Columbus
400 South Broadway, Lindenhurst, NY.
This is an ARRL approved Hamfest.

There will be radio equipment, electronic componets, computers and access-ories, softeware, books, technical manulas, ARRL information, Amateur Radio License Exams, Door Prizes.

Advanced registration is $15.00 each table. Tables at the door are $20.00 each. Contact Peter Portanova WB2OQQ at 516 541-4886 for table reserations. NO TABLES WILL BE RESERVED WITHOUT PRIOR PAYMENT due to the space available.

General admission is $ 6.00. $5.00 with coupon. (Coupons will be available at the door.)

VE - ARRL - 12:00 NOON
For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID),
and the examination fee, to the exam seesion. 1998 ARRL/VEC fee is $ 6.35, exact change is appreciated. Novice exams are free.
The VE team is from ISLIP ARES Group and GSBARC. Thanks guys.

Talk-in will be via GSBARC Repeaters on 146.685 4Z(136.5) PL.

Food Service during the Hamfest will be provided by members of the Knights of Columbus Council.

Information is also available during the GSBARC 2 meter info net every Monday evening at 7:00 pm following the Newsline Report on the W2GSB repeater, 146.685 -600 4Z(136.5) PL required. You may also write to:

Great South Bay ARC
P.O. Box 1356
West Babylon, NY 11704

Let me say that there has been some misunderstanding. I have been sent many many e-mails from folks who have had good delaings with William Lockwood.

Apparently he was away on vacation, and there was a misunderstanding with the banks on my part. If I kept better records I could explain what happened, but it looks like the first money order he sent was cashed by someone - either me or someone who got hold of it.

I chatted with Mr Lockwood this evening, and he explained that the first money order had been cashed and that is why the bank stopped payment on the second one. I don't know for sure but I don't think I ever got the first one. However, I do NOT think Mr. Lockwood did anything wrong nor would he.

If I have in any way cast any shadow on his reputation by my remarks I apologize to him. It is not worth $35 to me if there is any doubt that the mistake could have occurred somewhere else in the process. If I cashed the first money order, then I don't remember doing so, nor do I have any record of it, but it could have happened. I can tell an honorable man when I talk to one, and especially when so many other people write to attest to his good character.

Ansehen:

What the heck compelled you to post your dilemma here on this newsgroup??? First of all, most of the Hams here are self-centered-ring-banging-pompous-pukes, only interested in urination contests or propagating their own selfish ideas and interests. God forbid they relegate any time to someone who volunteers time monitoring an emergency radio frequency. Second, most Hams work in the telecommunications industry, so the newsgroup number you dialed here is disconnected, and no further information is available. Thirdly, the FCC, who supersedes all local government planning boards when it comes to cell towers, allowing the telecoms to do what ever the hell they want without a policing agency to oversee their happy-horseshit, is in cahoots with the telecom industry. After all, that's where those "dedicated FCC public servants" are going to end up, in the private sector, after the give away the frequency spectrum to the telecom industry. Lastly, I suggest writing a letter about your problem to "Dear Abby." At least she'll try to help you, and try to steer you in a direction where you can find an answer...These egocentric bowel-raggers couldn't give a rat's ass about your problem, especially when it involves a legitimate operator monitoring an emergency frequency on the, bleeech...CB band!

The code tapes you mentioned may be very good, I have no experience of
them. But please don't knock code-quick, who offer a full money-back
guarantee if it doesn't work for you !

http://www.cq2k.com

The Code Quick 2000 computer program has enabled myself any many,
many others to learn code when we just plain gave-up on other methods
(including Koch, Farnsworth etc). It enables one to learn at ones own
pace and if you have a mental blank, the sound-alikes (very easily
learned by rote) soon bring it back to you. I passed my 5 wpm code
test no problem first time, and am just about ready to take my 13 wpm
test (no plateau at 10 wpm as many detractors from code quick said
would happen). Admittedly, the QSO practice does not have enough
variety within it, but I think we're comparing apples and oranges
here; code-quick is designed primarily for learning code, it's
secondary function is for improving speed.

Surely it's whatever works for you that matters; anything that helps
people into learning CW has got to be good for Amateur Radio IMHO (but
then, I'm biased !).

Personally, at this stage in my (early) Ham career, 20 wpm and beyond
is not important to me. 13 wpm will do me just fine in the meantime.

Rob.

946. FS- 2 Tektronics mini-scopes cheap

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-17 00:00:00 UTC
From: ka4993gg@aol.com
Message-ID: <19981017113448.22834.00001966@ng09.aol.com>
Source record: 160022

I have 2 non-working Tekronics scope for sale; models 212 and 221. Both are in excellent cosmetic condition. They are the 2.5" screen size units with internal rechargeable battery packs, and sold for several hundred dollars when new. They both have the blue case, built-in probes and ac cords, and complete with rechargeable battery packs. The approximate dimensions are 5" X 9" X 3". Here are the details:

221 - single trace. This scope used to work, and one day just quite. I've been told by some on newsgroups that the internal rechargeable battery packs need to be replaced before the scope will even work on ac.

212 - dual trace unit. This scope is missing the CRT. I purchased this from a fellow with the intention that my tech friend can put both units together and make one working unit. The scope is otheriwse comeplete as above. It does have both rechargeable battery packs but I have no way to test to see if they are good.

These scopes have been sitting around in my closet for about six months. My tech friend has been too busy with work and his own projects to help me out. So, I would like to get these units out of my closet to make room for my radios.

I am asking $75 shipped for both scopes within the lower 48 States.

>Pile-ups are an established form of communication on the maritime HF
>bands.
(snip)

Thanks for the info. Where did I state that a pileup, per se, was unlawful?

>>It was the League, after all, that first devised the "Don't ask, don't tell"
>>policy.
>
>You might want to explain that a bit further; state the exact policy
>you're referring to and the date it was implemented.

Jeff, my apologies for not adding a disclaimer. I promise to be more careful next time and add words like "figuratively speaking..." and "implicit..." to statements that are obviously so to 99% of the rest of us.

>>We certainly owe the League a deep debt of gratitude for taking a leadership
>>role in promoting ethical operating practices,
>
>You're correct; almost every League publication I own instructs us in
>gentlemanly operating practices.

As parents tell their children not to smoke while lighting up that Camel..

>>without which the bands surely
>>would have been full of jammers, users of foul language, and other lids who
>>learned by example.
>
>Again, all the League can do is instruct - they can't enforce.

They *can* enforce the regulations pertaining to their operating awards and contests to set the example. It's funny that I've met and known DXers and contesters running amplifiers containing everything from a pair of 4-1000As, a number of 4CX5000s to forced air cooled 4CX10,000s to a 6166 TV transmitter tube to Henry 4 & 8Ks, but I never read about DXCC or contest disqualifications in QST for running unlawful power or using unlawful operating practices during or after the events. OTOH, you'd probably say I'm

not reading carefully enough, or there probably only five or six lawbreakers -worst case- on the DXCC lists.

>Bad manners
>breed bad manner.

Tell it to Newington, not me.

> For example, your bitterness toward the League will
>be picked up by a new ham with no knowledge of our history nor the
>League's history,

My so-called bitterness is directed towards the implicit hypocrisy of both the League and an individual proudly hanging arrl.org at the end of his email addres chastising an amateur for honestly stating he'd run unlawful power in the past.
In the future, I'll make sure to add "In My Opinion" to any statements posted here so that impressionable young minds incapable of judgement on their own won't get the wrong idea.

>and he'll begin to bad-mouth the League only because
>he read you doing so,
Are we talking adults, or eight year olds as you seem to think the average ham is?

>just as you're doing because you read of someone
>else doing so.
Squawkkk !
I suddenly want a cracker.
Actually, Jeff, I'm perfectly capable of formulating and defending my own opinions.

>You're one in a long line of dominos, being pushed by
>the one ahead, falling on the one behind.
State the exact date I became a domino and the precise dimensions I am.

73, and have a good weekend yourself.

> Just an "entry level" station will set you back a couple of grand at
least.

Wow!! James, you've got expensive tastes!! After 35 years of hamming, I
recently moderated my tightwad ways and spent $2K on what I thought was a
top of the line rig. Now you break my heart and tell me I'm at entry level!

> I'm using a computer power supply to run my QRP rig...the 12 volt
connection is rated at 10
>amps...I paid 15 bucks for it new at the local computer shop

Hmmm... You say it costs $2000 to $10000 to get equipped in the ham world,
but at the same time you're having fun with an inexpensive QRP setup. Make
up your mind--which is it??

Personally, I'm amazed at how cheap ham stuff is, especially since it
doesn't have the mass market of computers or stereo equipment.

I could get a rig that covers 160 thru 2 meters running SSB, CW (keyer built
in), FM, AM, general coverage, very compact ... for about $800 used or maybe
$1100 new. Try that in 1965 or 1970.

But if I were just entering ham radio, I probably wouldn't spend that much.
I'd get a pretty nice rig for <$500 have plenty of fun with it. I recently
sold my wonderful Corsair for $350 after 10 years of great performance so I
could buy that dream rig (entry level to you).

Subject: Re: QRP Rig

For Sale: Sierra QRP radio with the 10, 12, 15, and 17 meter band modules
and the KC2 Keyer/Counter/Meter assembly and KC2 Front Panel.
An external DC power source of 12-13.8 volts is required. All manuals included. This unit was assembled from a kit for an individual confined to
a nursing home but was never put in service due to failing health.
Kit cost: $464 Asking: $400 which includes shipping to US destinations.

I hope I have covered everything. About the only thing left is the fact they
need to supply the key (keyer) and speaker.

Morris

I think it's a non-issue. nothing can be done to change it so why stress? I'm sure a lot of people felt that reading books by candle-light lost it's "character" when Edison came along. But who cares? I sure don't. My HT is still right where I put it last night...the internet didn't make it disappear. I don't love radio because it's radio, I love radio because it's the best way we know of to communicate wirelessly. If I came across some other new-fangled method of getting the job done, I'd sell my radios as fast as I could before other people find out about it - in other words, radio is a means to an end.

God, I can't think of anything more boring than "collecting contacts". I have
no idea why hams are generally considered boring people....Maybe that's why
peope do DXpeditions, they're tired of collecting contacts so they just get up
and GO somewhere (and they take their radio too).

962. When and why did the abbreviation for microphone change?

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-17 00:00:00 UTC
From: wmunsil@aztec.asu.edu
Message-ID: <70aqb0lnp1@news.asu.edu>
Source record: 160038

As long as I can remember - and even before that - the abbreviation for microphone has been mike. It is my contention that the Japanese did it because they don't speak English as their first language.

Any other thoughts?

But in many cases the phones do go out - and what good is a computer, modem, and internet then?

> Being ready for an emergency doesn't require electronics experts, it requires
> emergency procedures and alternatives.

As long as everything is working acording to plan. If you're not an electronics expert then what do you do when something goes wrong? Wait until the local Radio Shack store reopens I guess. What you need is emergency proceedures and alternative PLUS some electronics expertise.

> Again, the knowledge needed in an emergency is operational and only rarely
> might electronics knowledge be a needed skill.

and only rarely is any emergency equipment needed in the first place but that does not mean we should not concern ourselves with emergency planning. The bottom line is that the ham with an HF rig, some sort of emergency power and enough electronics savvy to put it all together and make it work will be the best prepared for emergencies. The people with only computers and cell phones will be unable to communicate with anyone. Even VHF will be very limited without the supporting repeaters.

> But there are auto experts that I wouldn't ever let drive any of my cars...even
> in an emergency :-)

But, if during an emergency your car won't start I'll bet you'd be glad to have him around :-)

By the way, the discussion on this thread takes place on a regular basis in a government agency I work with. The higher-ups are always wondering why, when we have cell phones and a computer network, do we need to be spending money on a radio system - especially an "antiquated" HF radio system. Funny thing - nearly every time a hurricane hits they all all communicating via HF radio because its the only thing that still works. Another funny thing - they always need that electronics technician to string an antenna somewhere, decide which frequency to use, and get everything up and running for them.

>bright lad. Why don't you see if you can't figure it out on your own,
>then get back to us.

Hi John - I see you weren't able to figure it out, either. The problem here is that a decimal point in a number separates the whole-number portion from the fractional portion; the digit immediately to the right of the decimal point marks the tenths column. That two decimal points appear would mean that the above number has two tenths columns - highly ambiguous (ambiguity is the mortal enemy of mathematics). Also, when reading a number out loud, the decimal point is read as the word "and." Thus we'd read the above as "three and eight-hundred ninety-four thousandths and five tenths." Considering that "and" implies the addition operation, we now arrive at the number 3 + 0.984 + 0.5 = 4.484; as a frequency in megahertz, that's outside the U.S. amateur spectrum.

Anyway, thanks for your encouragement and your instructions to figure it out on my own. I'll keep plugging away on it. ;-)

(Note, commas and decimals points cannot be used interchangeably in Western mathematics notation. Let's not be as sloppy as our transceiver's digital readout.)

Message-ID: <Pine.GSO.3.96.981018152802.22427A-100000@access.mbnet.mb.ca>
Source record: 159895

I have a GE radio with a 4 position sliding dip switch that apparently is obsolete in the GE parts system. This is a pretty generic thing. It has the following numbers on it:

Upper rt corner has 443
Along the bottom it has 151B4448-2

Any suggestions? At one time the ARRL handbook was useful. I no longer have one. Here on the central plains of Canada it is not always easy to get parts. However if I had a phone number/e-mail source...

SB DX @ WW $OPDX.379
Ohio/Penn DX Bulletin No. 379

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 379
BID: $OPDX.379
October 19, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W1EK, N2OO, WB2RAJ/WB2YQH & The 59(9) DXReport, W3HC, W3UR & The Daily DX, N4GN, KP4BH, NN5O, W5AJ, W8KKF, W0YG, 4L5O, 9K2HA, CT3HF, DJ5AV & DX News Letter, G4BUE & DX News Sheet, IK2XDE, LU9AY, UA0SJ and VE3CUI for the following DX information.

3W, VIETNAM. Jani, YB0US/NM6US, will be operating from Vietnam as 3W6US. Operation will be from October 22-26th, this is including the CQWW SSB Contest. Overall operation will be SSB only. Watch 14195, 14260, 21295 and 21360 kHz. QSL via N2OO, PO Box 345, Tuckerton, NJ 08087.

4L, GEORGIA. Omari, 4L5O, will be active in the CQWW SSB Contest as a low power Single Operator/Single Band (3.8 MHz) entry. QSL ONLY via CBA. If anybody is interested in a contact with Omari, send E-mail to: 4l5o@caucasus.net

9A, CROATIA. QSL Manager Mac, W3HC, states that next week will be a good time to work Croatia. Look for 9A1CHP and 9A1CEI to operate as 9A7P during the upcoming contest and during the upcoming months. W3HC will handle the cards direct with postage.

A6, UNITED ARAB EMIRATES. "The 59(9) DXReport" states to look for Frank, DL2CC, to be active as A61AC during the CQWW SSB Contest. QSL via ON7LX.

BJDXC AND SCSDXT JOIN FORCES FOR 1998 CQWW SSB CONTEST. Tim, N4GN, reports in a press release that two major activities have been planned to provide you with Zone 24 contacts on a variety of bands. From Beijing, China, the South China Sea DX Team (SCSDXT) has teamed up with the newly founded Beijing DX Club (BJDXC) and drafted a first-ever Multi-Multi operation to take place from mainland China. The CRSA and Chinese government have allowed the team to use the historic call indicator B1A (Bravo One Alpha). The 6-station affair will use Yaesu FT1000MP radios and Alpha 91B amplifiers with beam antennas. The Finnish operators involved are OH2BH, OH2KI, OH2PM, OH2TA, OH2YY and OH6LI while the Chinese team

consists of BA1AA, BA1AB, BA1AJ, BA1DU, BA1FB, BA1HAM, BA1KA, BA1OK, BG1AC, BZ1DCH, BZ1BM and BA4TB. From Macau, at the QTH of XX9X in the heart of Macau, look for activity by the visiting U.S. group of N6AA, K6JL, K6MC, AB6BH, K5OT, N6ZZ and W6XD together with XX9AS, XX9MD and XX9XF. They will be racing against B1A in the Multi-Multi category. XX9X is a joint contest callsign of A.R.M. Macau, SCSDXT and Alberto Simao, XX9AS, which was used in several activities in the past. The build-up of the station will bring the XX9 signals on the air the week prior to the contest by this group using their own personal callsigns. QSL both B1A and XX9X via Steve Weatley, KU9C.

C6, BAHAMAS. Operators Kevin/N8ZJN/C6AKL, James/KB8YKR, Byron/WA8NJR, Joe/W8GEX/C6AJR and John/WZ8D/C6AIE will be active as C6DX from December 8-16th, from the island of Abaco (IOTA NA-080). Activity will be on 160 meters through 6 meters and maybe 2 meters. Their main focus on this trip will be the ARRL 10 Meter Contest and 6 meter F2, TEP, and E-skip. Their callsign last year was C6AIE. QSL to WZ8D at: John Walker, 1930 Meredith Ln., Loveland, Ohio. 45140-7216 USA.

CP6, BOLIVIA. Mats, LU9AY, reports that he will be signing CP6/LU9AY, from November 25th to December 5th. Activity will be on 160-10 meters CW/SSB. QSL via LU9AY: 670 Honorio Pueyrredon, ZIP 1405, Buenos Aires, Argentina (DO NOT use the old LU9AUY via POB 13, ZIP 1411). Bureau cards are OK.

CQ9, MADEIRA. The team of CT3HK, CT3IA, CT3BD, CT3HF, CT3BM, CT3DL and CT3KN will be active in the CQWW SSB Contest with the special callsign CQ9K as a Multi-Single entry. QSLs via CS3MAD (or CT3 bureau).

E3, ERITREA. By the time you read this, Jacky, F2CW, should be QRT from here and on his way to the southern part of the country. He will not operate from this area, but he will return to his operating location and operate for 4 days between October 21-25th. It has been reported that he has made about 16000 QSOs so far. Jacky will leave next week and head to Djibouti. Look for him to possibly operate as J28AG for 3 days before heading to Nairobi, Kenya.

EL, LIBERIA. The "DX News Letter" reports that EI5GIY is here on a work assignment but wants to become active as EL2VO. Look for him to possibly be active until October 29th. QSL via EI5GIY.

FR/G, GLORIOSO ISLAND. Jacques, FR5ZU, who is only active on SSB, will remain active as FR5ZU/G until October 30th. He was heard this past weekend on 14256 kHz around 0245z and on 28480 kHz bewteen 1245 and 1300z. QSL via VE2NW.

FT5X, KERGUELEN ISLAND. The "DX News Sheet" reports that Helios, FT5XN, will once again be active in January. QSL via F6PEN.

HB0, LIECHTENSTEIN. A Hungarian group consisting of HA0HW/Laci, HA4XG/ Geza, HA6NL/Laci, HA6PQ/Tibor, HA6PX/Csaba and HA6ZV/Tibor will be active during this year's HA-QRP Contest (sponsored by Radiotechnika the journal of Electronika), starting 0000z, November 1st, and until 0700z, November

7th. During their activity they will be on 3511 kHz, +/-QRM, 24 hours a day with the callsign of HB0/HA5RT/p (As a QRP station, which means that power input is 10 watts or less). They will operate from Triesenberg at 1400 meters ASL. The operators will use HB0/callsign/p on other bands, mainly on CW and RTTY with TEN-TEC OMNI V, FT-840, GPs and dipoles. Their suggested frequencies are:
CW : 1831, 7011, 10104, 14011, 14026, 18071, 21011, 21026, 24891, 28011, 28026 kHz,
RTTY : 7040, 14086, 21086, 28086

QSL cards for confirmation with HB0/HA5RT/p QSOs should go to HA6NL and for the others should go via their home callsigns.

HI8, DOMINICAN REPUBLIC. The German team of DL1JDK, DL3ALI, DL4JAN, DL4JS and DK8YY will be active as homecall/HI8 from October 21st to November 1st. Their activity will be on all bands CW/SSB. Also look for DK8YY/HI8 to be an entry in the CQWW SSB Contest. QSL via DL4JAN.

INDIAN OCEAN DXPEDITION UPDATE. Charlie, W0YG, reports to OPDX that the callsigns have now been issued for their intended Indian Ocean operation next February. They are VK9XX for Christmas Island and VK9YY for Cocos-Keeling. Operations as VK9XX will be from February 6-13th (1999) and from VK9YY from February 13-20th (1999). W8UVZ, K9FD and W0YG will operate, concentrating on 80/160m, the WARC bands, RTTY and some 6m activity if there is an opening.

J3, GRENADA (Update and Reminder!). Look for J3A to be a Multi-Multi entry in the CQWW SSB Contest. The group is planning six complete stations operating from the Grenada Emergency Operating Center. About one-half of the group will arrive on October 20th and the balance the following day. Expect non contest operating to begin late October 21st. Several members will remain a few days after the contest while most of the operators will return home on October 28th. Participating amateurs are: WA8LOW, W8KKF, NH7C, HN7CC, N0AT, N0KK, W5WW, K5PN, VE3RZ, IK3VIA, DL6LAU, ES7RE, IK6CAC, N6HR and KP2A. Operators' Grenada calls are expected to be J3/homecall, although previously assigned callsigns might be reissued (W8KKF as J37K, WA8LOW as J37L, KP2A as J37A and N0AT as J38AT). Activity will be on all bands, but there are plans for six meters and the WARC bands. Also, a RTTY station will be available. QSLs for J3A should go to WA8LOW. QSL individual callsigns to home call or as announced. Do not, repeat not, send cards to the J3 bureau. Please do not combine mailing of J3A cards (expect J37L,WA8LOW) with cards for the individual oparators. It has also been announced that K2KQ will lead another group in November to activate J3A in the CQWW CW Contest. WA8LOW will also handle the QSLs for this event.

QRP ACTIVITY. James, NN5O, reports to OPDX that between October 26th and November 8th, he will be operating QRP (using a MFJ-9420, 9 watts) on 20 meters SSB/CW. Look for him to be on 14040+, 14160+ and somewhere above 14300 kHz for Generals from IT/, HB9/ and DL/ from hotels/B&Bs and occasionally from his rental car. James states, "Although this is not a rare DX, it should be a pretty good test for all concerned as to what

you can and cannot do with a small, light setup while on vacation in Europe with a little planning."

QSL INFO AND NEWS.....
5R8GC from the Malagasy Republic was Baldur, DJ6SI. His operation ended on October 16th. QSL via his home callsign.

P40N during the upcoming 1998 CQWW SSB Contest is via WJ5DX direct.

LOG Search Server for the August EU-155 operation by the "Project DX Team" A.R.I. Lomazzo (Co) and all of their other activations can be found at the following WEB page:
http://space.tin.it/associazioni/qjber/arilom/project.htm
The QSL cards for the EU-155 operation will be ready during the first half of November.

CW4CC was the special callsign for the Ciudad De La Costa Anniversary of the largest demography increment in the world. QSL via CX2ABC.

SPECIAL PREFIXES. To commemorate the 75th anniversary of the first two-way trans-Atlantic exchange between Amateur Radio Operators", Industry Canada (Canada's FCC) has authorized the use of the following special callsign prefixes from December 1st to December 31st (1998) (normal prefix/special prefix): VE1 to CG1, VE2/CG2, VA2/CF2, VE3/CG3, VA3/CF3, VE4/CG4, VE5/CG5, VE6/CG6, VE7/CG7, VE8/CG8, VE9/CG9, VO1/CJ1, VO2/CJ2, VY1/CK1 and VY2/CK2. "Help take note of a very special event in the history of International Amateur Radio, and work one of these prefixes... 73" de Eddy VE3CUI

T32, EASTERN KIRIBATI. Karl/DL1VU and Gerhard/DJ5IW will be active as T32VU and T32IW respectively starting November 3rd. Karl will be handling the CW action while Gerhard does the SSB part.

VP2E, ANGUILLA. Joe, W1EK, is attempting to operate from the island of Anguilla during the CQWW DX PHONE Contest October 24 and 25th. He has not been assigned a callsign yet. Joe's station will consist ICOM 735, dipoles and maybe a vertical antenna, and possibly an amplifier. The hotel has their own electric generator for public power failures, but Joe is attempting to ship a small 22 LBS generator in case ALL FAILS during the contest. Joe hopes to be active on the air by October 22nd, for a few contacts before the contest. He departs on October 26th, and will make as many contacts after the contest as human energy and coffees allows. You can QSL via W1EK any callbook, or CD-ROM address.

UA0, ASIATIC RUSSIA. Yuri, UA0SJ, reports to OPDX that he is now active RTTY and is trying PACTOR. He is also sometimes on SSTV. If interested in a contact, send E-mail to Yuri at: ua0sj@windoms.sitek.net
All QSOs for contacts with him during the JARTS WW RTTY Contest and the upcoming CQWW SSB DX Contest are to be sent direct ONLY to:
Yuri A. Maltsev, P.O.BOX 2304, Bratsk-city, 665700, Russia / Asiatic /

WP3, PUERTO RICO. Jimmy, KP2BH, reports to OPDX that with a last minute setup due to hurricane Georges, the WP3A team will be active in the CQWW

SSB Contest. The WP3A team consists of: WP3A/Jaime, WP4NHM/Rafael and KP2BH/Jimmy.

ZC4, UK BASE ON CYPRUS. An operator name David, signing ZC4DG, has been active over the last few weeks on SSB. He was heard this past week on 18150 kHz between 1400 and 1430z. There has been another report stating he has also been on 20, 12 and 10 meters (28455 kHz just be 1200z, The Daily DX). His length of stay is not known. QSL via G0OAB.

I would find it quite difficult to talk on the internet with the four or five other people I talk to on a regular basis going to and from work. I would have found it VERY diffcult calling on the internet to be evacuated from my flooded home March 1 of last year when my phone did not work. I would also have found it quite difficult calling the police over the internet to a motor vehicle accident I was involved in.

Your arguments against ham radio can be offset by many other people's arguments for. It is a moot point - each has a viable place in our society. If you wish to spend your time on the internet, please do so. I enjoy each in it's own time!

This takes a little practice to develop the necessary skill. First practice
on some scrap. Use a proper size wire stripper to cut the insulation at
each end of the section to be stripped. Then very carefully, use an Exacto
knife to cut a slit in the insulation as close to the wire as possible
without nicking the wire. Then use needle nose pliers to remove that
section of insulation. This works best on stranded wire but should
also work on solid.

You're a slow learner. You're only allowed one decimal point in our
standard notation.

>Only hopeless mathematical Luddites could possibly
>claim failure to grasp the dual decimal system of notation.

Quiz: Interpret 57.381.

Did I just write 57,381.0 or 57 381/1000 followed by a period?

Are you as sloppy in your EE work as in the thinking you've displayed on here today? Also, there is no "dual decimal system of notation" in the U.S. None.

Since you're hopelessly lost, the freq'y is 3.8945 MHz, or 3,894.5 KHz.

>"A foolish consistency is the hobgoblin of little minds."

Consistency of notation in the sciences is the primary prerequisite for success in cooperative advancement.

>financially constrained amateur operator? Thanks.

The first thing to do is to get in touch with your local radio clubs and find out what is available in your area. Most repeaters are operated by clubs, so they can tell you where those machines are, and what frequencies they operate. Most hams today start out on 2m, and 2m radios are cheap, but in some areas the activity on 70 cm makes it worthwhile to buy a dual band rig.

Deciding whether to buy a HT or a mobile/base radio depends on the location and coverage of the local repeaters. In some cases, a HT will suffice, but in many cases you'll do much better to get a mobile rig (which can of course be used in the house too with a AC power supply or a battery and charger). The extra power offered by the mobile rig will get you solidly into repeaters that you won't be able to hit with a HT, or into which you'll be very noisy with a HT (they don't call them Handi-Scratchies for nothing). You won't be very welcome on a repeater where you are always noisy.

A HT will limit you to strictly local communications, a mobile rig may allow you to reach out to more distant areas. (Both of these statements are contingent on the locations of repeaters in your area.) Most of the activity on VHF/UHF is FM voice operation through repeaters. There is also some simplex operation, but you generally need more power and a better antenna than a HT provides to do it. The other big activity on VHF/UHF is packet. Again, you want a fair amount of power and an outside antenna for this. Some people try to use a HT, but that's generally not very satisfactory. There are more esoteric activities going on too. Satellite operation and weak signal operation can be

very exciting, but you need a multimode radio and, usually, pretty good external antennas for this.

VHF/UHF FM voice operation is your lifeline to other local amateurs. You'll talk to the same people day after day. That's good in that they can form a support group for you, helping you with any questions or problems you might have. You'll likely make some good friends this way. OTOH you might prefer to meet different people every day. In that case, you'll want HF capability.

Your license allows you on 10m voice/CW/data and allows you to use CW on the 80, 40, and 15 meter Novice subbands. The latter are pretty dead these days, but 10m is jumping when the band opens up. But it isn't open all the time. If band openings don't coincide with the times you have to operate, 10m can be very disappointing. If you decide HF is your thing, you'll want to upgrade as quickly as possible to at least General. That'll give you many more options.

You also have to think about antennas. A dipole for 80m is 136 feet long and ideally should be as high as possible, so you have to consider if you have room to string it. (You can use a shortened antenna, but it won't work very well.) A 10m dipole is only 18 feet long, and a 10m vertical is only 9 feet high, so that's less of a problem, and a 2m vertical is only 19 inches tall, so that can be put up nearly anywhere (the higher the better though).

Even if you decide to buy a HT, an external antenna can still be a useful addition. The rubber ducky that comes with the HT is very inefficient, about 10 db down from a 1/4-wave vertical. And of course it is attached to the radio instead of being high and in the clear as a good antenna should be. So definitely consider adding an external antenna, on your car if you have one, and at your residence.

Now regardless of whether you decide to buy a HT, mobile/base radio, or a HF rig, definitely consider buying *used*. That'll save you at least 50% off of new radio prices. Of course that means you'll be buying radios that are a few years old, but solid state gear doesn't wear out (except for some easily replaced pots), and should work as good as new. The only exception to this might be the HT. Those tend to get a lot of abuse, and the new ones are much smaller than the old ones, so buying new might make sense for them.

(When buying used, it is definitely worthwhile to enlist the aid of an experienced and knowledgeable amateur to help you decide if a particular radio is a good deal or not. This is where the local club can be helpful. You'll meet experienced amateurs there who will have first hand knowledge of the particular radios you're considering.)

My feeling about HTs is that they are a specialist tool, intended primarily for foot-mobile operation. A mobile/base radio will always

do better in the car or from the house. So think about where and when you're most likely to operate when choosing the sort of radio you buy first. My opinion is that a HT should be a second or third radio purchase, not the first. But I note that you post from an edu account, so a HT might be more suited to your lifestyle than it might be to someone with the commuter lifestyle.

The operative phrase above appears to be "In the past". Ships equipped
with GMDSS don't require ROs today. In other words, as Bill suggests,
they depend on prior preparation and redundant automatic equipment.

In an emergency, time is almost always a critical factor. The time required
to do field expedient troubleshooting and repair of equipment faults is
basically indeterminate. It can range from a few minutes to never, depending
on the nature of the fault, tools and spare parts available, skill of the repair
tech, etc. The time required to switch to an alternate set of equipment is
usually minimal by contrast. So having prepared alternatives is the preferred
way of assuring reliability.

That said, I would never totally discount electronic expertise. Total redundancy
isn't always possible, and a system level understanding is still needed to shift
in spares without the possibility of suffering the same fault. And, during non-
emergency periods, it is valuable to be able to do field maintenance on faulted
equipment so as to *maintain* redundancy.

Hiya,
For sale:-
Kenwood TS440S - HF Transciever - Features (summarised from manual):-
1. Wide Dynamic range-102 dB dynamic range (500 Hz IF bandwidth)
possible.
2.General coverage reception from 100kHz to 30 MHz.
3. All mode operation.
4. 100% continuous duty transmit
5. CW full break-in.
6. Build-in XIT/
7. Switchable IF bandwidth.
8. Swithchable AGC time constant.
9. All mode squelch.
10. Versatilr frquency control-e.g dual, digital VFO's (A?B) enable
crossband, cross mode operation.
11. Front panel control of the TUNING torque is provided.

Boxed with manual.
Excellent condition. Unused on Transmit since purchased 8 Months ago
upon advice of and from a UK dealer. Passed RAE in May, but unable to
master morse yet, hence sale.Cost 549 pounds, Accept 430 pounds .

S. Lincs. area, UK

Thankyou
73 de Fran :-)

Don't take what you see on this newsgroup as the way Ham Radio really is. Most of the people who post gloom and doom messages are either trolling or just bored with the hobby.

Upgrade and enjoy the hobby, you will find that over 90% of the people you work on air are great people.

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

October 16, 1998
Target: rec.radio.amateur.misc, rec.radio.amateur.policy

This is The RSCM Wire, for Friday, October 16. I apologize for the lateness of this issue, but I have been very busy lately; redesigning the W8MMQ web site, traveling north to visit some friends, and also not feeling too good lately. I will attempt to get the next issue out earlier.

For other amateur radio news, information, and links, be sure to visit our web site at http://www.qsl.net/rscm/. This site is updated on a regular basis, and may contain some information that did not make it into this issue of The RSCM Wire.

In this issue: W8MMQ web site update; an RSCM special notice; the FCC goes after jammers; Art Bell quits his radio show; and much more!

W8MMQ WEB SITE UPDATE
As many of you are probably aware, my web site was recently removed from QSL.NET. Al Waller, the host of QSL.NET informed me that I had engaged in several violations of his newly established Acceptable Use Policy.

I admit to having violated the Policy, which, at the time, I did not even know existed. One of the violations mentioned was that I was posting mass messages to newsgroups, in an effort to attract visitors to the web site. I have told Al that I will no longer do this, and he has reactivated the account.

You may reach the site at http://www.qsl.net/w8mmq/. Please pass the word around that the url is now active once again! And, many thanks to Al for allowing me back on the server.

You will also notice the W8MMQ web site has a complete makeover, with a totally different color scheme. I am going to try various colors from time to time, and separate my politically-related material from the actual amateur radio page.

AN RSCM SPECIAL NOTICE
The Radio Society of Central Michigan now has a two meter repeater on the air. The uncoordinated repeater is operating on 146.74 at this time. We are currently working on audio and reception problems, and would appreciate reports from people in the Central Michigan area.

We expect good to excellent coverage for base stations throughout Greater Lansing, and good coverage for mobiles in and around Lansing.

The repeater is currently operating as a split-site system, and does not have a controller in line at this time. We should add the controller within the next several weeks.

THE FCC GOES AFTER JAMMERS
Malicious interference has always been a problem on the ham radio bands. However, it would seem that the Federal Communications Commission is wanting this to change. Several jammers have been caught, and charged, recently in cases across the country.

"The FCC has levied a $2500 fine on a Florida ham for malicious interference on a business radio service frequency. Jeffrey G. Guss, KF4MWT, of Palm Bay, Florida, was cited by the Commission following an investigation of several months that also involved malicious interference to an amateur repeater." - The ARRL Letter, 10/9/98

Also, a Connecticut man, Joel Langdo, has been arrested by Wethersfield authorities for mischief, breach of peace, and interfering with police communications. In addition to these charges, Langdo faces similar charges in several other communities, as well as federal charges. He was arrested on September 29.

"Langdo, a security guard who does not hold an amateur license, allegedly used a modified ham radio hand-held to transmit on police and fire frequencies used by as many as three dozen Connecticut public safety agencies. At one point, he is said to have jammed the Manchester, Connecticut police system for 15 minutes." - The ARRL Letter, 10/9/98

The Capitol Region Malicious Interference Tracking group aided in the search for Langdo.

DRUGS FOUND IN STEREO EQUIPMENT
Fairfield County, Ohio sheriff detective John Baumgardt went to a local hamfest with his son recently, where they purchased several pieces of stereo equipment. They soon found that one of the units was not working.

They opened it up, only to find that the circuit board had been removed and replaced with three packages of cocaine, with a street value of nearly $400,000. Currently police are tracking the equipment's serial numbers, to find the previous owner. The man that sold the equipment to Baumgardt has said that they came from a local pawn shop.

ART BELL QUITS RADIO SHOW
Radio talk-show host Art Bell shocked his audience last Tuesday morning with the announcement that he was quitting his show, and leaving radio broadcasting. Bell's show, "Coast to Coast", had nearly 15 million listeners nationwide.

Bell cited a "threatening, terrible event" that had happened to his family as the reason he was leaving the show. He would not give any further details, nor explain what exactly the event was. His web site, http://www.artbell.com/, also gave no further details on this decision.

Bell told his audience, "So for now, and the foreseeable future, that's it! That is the end of this man's broadcast career. So thank you, and goodbye ..."

Art Bell holds the amateur radio callsign, W6OBB. Bell was active on 75 meters, usually after his show, on 3820-kHz.

UPCOMING AMATEUR RADIO CONTESTS
For complete contest information, visit the ARRL Contest Calendar, on the internet at http://www.arrl.org/contests/.

The Illinois QSO Party
Sponsored by the Radio Amateur Megacycle Society, the contest runs from 1800-Z on October 18 until 0200-Z October 19. Phone and cw modes only, and no repeater QSOs. For more information, visit http://www.megsinet.net/~jematz/ilqso98.html.

The RSGB 21/28 MHz Contest, CW
Sponsored by the Radio Society of Great Britain. The contest will run from 0700-Z until 1900-Z on October 18. Exchange RST and serial numbers. For more information, visit http://www.rsgb.org/.

AND ... IN CLOSING
Thank you for reading this issue of The RSCM Wire. We would appreciate any comments or questions that you may have for us. Please direct them to w8mmq@juno.com. Thank you.

Information from the following news sources was used in the production of this newsletter: Amateur Radio Newsline, The ARRL Letter, and the Art Bell web site.

For more information on the Radio Society of Central Michigan, be sure to visit our web site at http://www.qsl.net/rscm/.

1011. ACS Newsletter for 10/12/98

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-18 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <70di8r$bh1@news.Hawaii.Edu>
Source record: 159993
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

Welcome to the Auxiliary Communications Service Newsletter, developed
by the ACS Training Unit of the State of California Governor's Office of
Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency
communications closer together by sharing common ideas, and by introducing
new technology into the emergency services community. All individuals with
an interest in emergency communications, disaster preparedness or helping
the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many
different organizations with the same common goal: emergency response. We
encourage everyone, from whatever organization you represent (or just
yourself!) to bring us your ideas, suggestions, concerns, manuals,
handbooks, or opinions so that we may share them with the group. To those
of you who have just joined us, welcome aboard! Newsletter Members: <700>

.....
>From the Editor's Desk: This edition of the ACS Newsletter is dedicated
to the memory of two dedicated firefighters who lost their lives last week.
Veteran airtanker pilot Gary Nagel was killed when CDF Tanker 96 went
down while battling the Edna fire in Riverside County; Orange County
Fire Captain Tom Wall suffered a fatal heart attack while part of a local
government Strike Team on the Taylor fire, also in Riverside County.
These two men gave their lives in the line of duty; our condolences go
to their friends and families.

Congratulations go forth to Ken Bourne and his ERI Team for a very
successful Emergency Response Institute held last weekend at the
Ben Clark Training Center in Riverside. Tremendous speakers and great
topics made this Institute fun and informative for everybody who attended.

Stay safe everbody -- see you next week! Dave Larton, Editor
.....
Please Welcome:
Bob Murdock, WX2NJ <ecishore@adelphia.net> Bayville, NJ:
Ocean County, New Jersey, ARES Emergency Coordinator.
This site was recommended to me by my Section Manager.
I'll probably be subscribing to your weekly newsletter to pick up
some ideas from a well organized communications service.
.....
Don Lynn KD6LSM, has been appointed as a Training Coordinator
for the State ACS Training Unit. Don is a Senior Technical Manager
with over 24 years of telecommunications experience with Pacific Bell.
Don will be working on new Training programs with the State ACS

Unit. Welcome, Don!
.....
What's New on the Web:
Seattle, WA ACS recently participated in a Countywide amateur radio
drill organized by King County Office of Emergency Management and
the Countywide ACS coordinating committee. For a report on the drill,
point your browser to
http://www.ci.seattle.wa.us/engr/qrv/9803qrv/mark.htm
.....
This week's EMCOMM Bulletin:

EMC153 Keeping up with Disaster Communication Technology --
Part 2 of 3
10/12/98 For immediate release

^Keeping up with Disaster Communication Technology' --
Part 2 of 3

Joel Kandel KI4T
ARRL Technical Coordinator, Southern Florida

Reprinted from QST Magazine, October 1998, with permission from
the author.

^When this happens, what will be the continuing role of Amateur Radio in disasters? We can maintain our worn argument that there will always be a need for the ham with a 2-meter rig or an HF rig, and given Armageddon, even a straight key. But remember that the expected efficiency of message handling will continue to rise as new systems come on-line. Will hams also rise to meet these expectations? Maybe yes, maybe no.

^Some of us who have worked on ARRL planning and advisory committees have proposed greater integration of other telecommunication technologies with Amateur Radio. The fear always was that we would dilute the "purity" of Amateur Radio service, and give the commercial telecommunications would greater cause to lust after our spectrum. Well, this is happening anyhow. APRS, an Amateur Radio developed technology, now incorporates computer, the Internet, weather stations, and the Global Positioning Satellite System. WinLink and NetLink developers are interfacing Internet-mail and HF radio using PAXTOR. Indeed, the most exciting areas of Amateur Radio are actually hybrid technologies, overlapping modes and telecom services.

^In this day and age, Amateur Radio operators not only may need to integrate other communication technologies, but also become proficient in new technologies that do not directly integrate with Amateur Radio. Over the last few years, I've noticed members of Amateur Radio Communications teams to be the keepers of their municipal radios. In 1992, most municipal communication was still handled by conventional two-way radio. Today, in Florida,

it's handled by 800-MHZ trunking.

^&#65533;Suppose a municipality handed hams an 800MHz trunking radio.
Would the hams understand the concepts of a trunked radio system,
talk groups versus discrete frequencies, and be familiar with the
tones the radio would emit indicating channel capture, queuing,
or system-busy? Or suppose they turned over a satellite telephone
terminal to the ham team to relay messages, and asked them to
move from one location to another and aim it correctly at the satellite.
Would the amateurs rise to the occasion? Probably not. They would
have to inform the municipality that they were not familiar with the
technology, return the equipment or risk losing life and death messages.'

(continued next week)

ACS Web page: http://acs.oes.ca.gov FTP archive:

boblyons@umich.edu writes:
>I'm amazed at the number of people that recommend mobiles over
>HT's. Do that many of you live in your cars, or operate from
>only one car and one house?? Doesn't anyone get OUT anymore?

You'll probably find that most people who have a mobile rig *also* have at least one handheld.

But some people (e.g. me) start out thinking that buying a handheld is the ideal first radio, because you can use it in the car and at home too. Then they find out that a handheld often doesn't work very well in the car and at home, even after spending extra money on power amplifiers and filters.

Now, if you really need to use your radio on foot or bike (skateboard, whatever), then buying a handheld first is a necessity. But if you really only want to use it in the car or at home, a mobile is almost certainly a better choice.

Dave

Kinda funny, I think he had just announced that his show had been bought out by a new broadcast Co. Sounds like he got fired to me. Just a guess though. Or the three piece suiters irked him for some reason and he quit. You can be sure the biz end had a great deal to do with it. MK

I listened to him all the time. Pretty entertaining some of it. But I
like the stories about ghosts,ufo's,funky looking gorrila monsters,etc.
that no one else will talk about.
His show didn't get to be as popular as it is for nothing. Also
considering it's on when most normal people are asleep. I listen to him
on a 440 broadcast link to KTRH radio on my HT. Will get kinda boring at
night without all his weird types to listen to. MK

Amateur Radio Hero's are the novice's & techs I hear working CW in the Code portions of 80, 40, and 15 meters. They could be making phone contacts, but are making CW contacts. And with each contact their code skill gets better, then one day they'll upgrade. It seems to me that the best thing for ham radio is to have as many different communication modes as possible. CW is one of those modes.

The Novice's & Techs who use code, IMHO, are Heros.

You code haters, IMHO, are low life SCUM!

Have a nice day!

1017. Tube Rig Parts & Info

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-19 00:00:00 UTC
From: Dennis Boyle <chimera1@mail.idt.net>
Message-ID: <362BA164.4FEB@mail.idt.net>
Source record: 159850

I spend all my time restoring or building audio equipment. In a museum auction I bought a 1000 Watt "Something". It is one of the finest example of tube construction I have ever seen. It is labeled 1000 W Amp mfg by W5EDW. It uses a pair of 810 tubes. This rack mount beauty is the only piece of this rig the museum had. I am not smart enough to even know what's missing. Certainly the power supply and whatever drove or modulated it.

Does anybody have any idea of what this is, maybe a schematic from an old Radio Amateur Handbook. I have a lot of old vintage parts, transformers and tubes, that I could use to construct the missing pieces. I have no plans to use it but the level of love and quality that went into its creation deserves to be saved. I would be happy to swap vintage transmitting parts, transformers and tubes for help with this project, I
have quite a bit in inventory. Any suggestions or ideas you can offer would be greatly appreciated.

Sorry for any breaches of etiquette, this is the first message I have ever posted.

Best Regards,

Dennis Boyle, chimera1@mail.idt.net

Sounds like you work the paper chasers. Not many of the people I talk to
act that way.
You need to find real people to talk to and forget the paperchasers. MK

Of course it's not dying. I hear just as many or more people on the bands as I ever did. Ever try to find a clear spot on 75m for a 1 on 1 qso? Not too easy. No room hardly. Dead? not hardly. Same can be said for 20m and others. Listen to ten meters when it gets opened up. Dead? not hardly. VHF/UHF dead? not hardly... Whoever says ham radio is dying needs a new stethoscope. MK

1022. Repeater for sale - Exec II, RLC-Club, etc.

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-19 00:00:00 UTC
From: srwhite@ibm.net
Message-ID: <362b93f4.0@news3.ibm.net>
Source record: 159855

Because of installation issues and the fact that I might be moving within
the next few months, I have been forced to abandon my repeater project.
So now I've decided to sell it. Here's what I have:

Link Communications RLC-Club Repeater Controller
Price: $700 (All options included here cost over $900 new with shipping)
Features:
- 800 User Macros
- Voice Synthesizer
- Built-in 8 Second DVR
- Latest Firmware (v1.79)
- 2 Seperate Radio/Repeater Ports (By way of included Deluxe Module)
- 8 Contact Closure Outputs
- 4 Analog Inputs
Includes:
- Controller
- RLC-Deluxe Expander Module
- (1) RLC-ADM Audio Delay Module
- (1) Temperature Sensor
- (1) Original Manual
- (2) Copies of Manual
- Radio Connecting Cables (DB-9)
- FREE SHIPPING (UPS Ground, lower 48) in Original Box!
- Total Cost New $850
- NEVER USED IN THE FIELD!

Visit The Link Communications Home Page at http://www.link-comm.com for more information
on this controller.

GE Mastr Exec II Radios
Price: $225
Includes:
- (1) Exec II Rare "56" Split Tuned and Crystalled for 146.955-
- Duplexed Electronically and Mechanically and Ready for Use
- GE UHS Preamp Installed on Above Radio
- (1) Exec II "66" Split for Parts
- Home-Built Rack-Mount Control Head with Cable
- Exec II Service Manual

Rack Mount Control Head Features/Includes:
- Terminal Strips Terminate all Radio Control Lines
- Controls for Monitor Volume and Repeater Squelch
- 1/8" Jack for Local Monitor Speaker

- Radio Power and Control Head Power Switches
- PTT Control Selection Switch (Toggles Controller PTT and Manual PTT)
- CAS to COR Converted
- DC Blocking on all Audio Lines
- Built-In Comm-Spec TS-32P CTCSS Encoder/Decoder
- Backup PL-Encoder (Unsure of model)
- Front Panel Selection of CTCSS Encoder
- Front Panel LED's Indicate TX, RX, Radio Power, Control Head Power
- All Outputs Terminate to Link-Communications Compatible DB-9 Connector

---

Sinclair Hybrid Ring Duplexer
Price: $175
Features:
- >100dB Isolation at 500kc Seperation
- (4) 7" Diameter Cans, (2) Per Side
-New Cabling on Receive Side

Includes:
- Owners Manuals
- All Cables
- Female 'N' Connector Inputs And Ouputs

NOTE: These require experience in tuning and have have been known to
work poorly in enviroments prone to wide temperature swings.

These also need work, there might be some additional cabling problems
causing random bursts of RF to get into the receiver. Sold AS-IS.

I would prefer selling the whole thing as a package, and am willing to take
a little more off the total package. I'll let it all go for $1,000 and
I'll pay for shipping via UPS Ground in the lower 48.

For more information, please visit my web site at: http://mypage.ihost.com/unitedsound

Thanks,
Steve White

Tracy...

You've obviously missed totally the point of my post, haven't you???

I'm saying this activity shouldn't have to be in the freeband area. There
should be some band like 40 or 80 meters where virtual code classes could be
held. Not the 'BROADCAST MODE' of ARRL!

1030. Help with Icom 725

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-19 00:00:00 UTC
From: geomac@hop-uky.campus.mci.net
Message-ID: <geomac-1910981708490001@s09-pm39.snwestsac.campus.mci.net>
Source record: 159863
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.boatanchors

Hello,

I have an Icom IC725 which has developed a problem I have not seen before. There is no RF output on the 40 meter band, although 18-20 amps of current is still being drawn in the key down position on 40, and when modulated in the upper or lower SSB position, the power supply shows normal voice peak current draw. 40 meter receive is perfect.

The rig functions perfectly with full output on all the other bands and in every mode on those bands. I thought it might be a problem with the bandpass filter, but I would have thought this would shut down all current being drawn from the PA.

If anyone has any thoughts I would appreciate them.

Thanks and 73
George

>As the resident NY'er here, (at least who posts--there are probably
>thousands lurking) my story should get interesting.
>
>In any case, we should probably set aside some common place to meet,
>perhaps a physical location, perhaps a ham radio frequency, who knows. We
>can't just let csy-2k die.

Been done already, check DejaNews.

In any event, I'll repeat it:

The Y2K Rollover Net will commence on 31 Dec 1999 at 2000Z. Primary Net
Frequency is 28.350MHz USB +/- QRM. Primary NCS is N4ZHG, alternate NCS is
AH6GI/4. Secondary nets will be established as needed, and may turn into a
full blown ARES/RACES operation.

One hopes not.

If it weren't for the fact that such is not legal, I'd suggest calling the
net by playing a certain track by R.E.M. (wonder if I can apply for a
one-time variance from the FCC? It'd probably go over like a fart in
church...)

For those who aren't ham radio aware, the frequency is in the middle of the
Novice 10 meter allocation. By the time rollover hits, we should be getting
some good skip on that band.

1035. NEW HAM RQSTS ADVICE

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-19 00:00:00 UTC
From: KD5FJE@webtv.net
Message-ID: <28992-362BF5FE-16@newsd-133.iap.bryant.webtv.net>
Source record: 159868

I just got my license (Tech-Plus) and hope (no make that will) pass General in Dec. I'm sure you experienced hams have heard this question multiple times so I apologize for any redundancy.
There are two schools of thought on how to buy a first radio(s). 1- Buy the best radio that one can afford that does it all (my choice would be a Yaesu FT847) or, 2-Buy multiple "inexpensive" (relative) radios to cover each band group so if one goes down, you are not off the air completely, nor are you out 2500.00!
I tend to lean toward the logic of the second option so that radios can be purchased a radio at a time as money permits and because of the already mentioned. My choices would be: 1-HF....Yaesu FT840.
2-6M...Alinco DRM06TH mobile (used primarily as base). 3-VHF/UHF 2M/70cm.....Alinco DR605TQ mobile (primarily used as base).
I already own a DJ191TH (HT) and love its ease of use and quality. I tried a Shack 202 HT and thought it was a piece of junk and extremely user UNfriendly. I chose Alinco for my wishlist (above) primarily because I can get a 3yr warranty for 20 bucks from Fry's electronics (they fix or give you a new one and they don't carry any other brand but Kenwood which I have heard many have had trouble with despite reputation). Ham stores provide little customer service, if any, once you walk out the door. If it doesn't work when you get it home, tough, call the manufacturer. Sorry but that won't fly when I'm spending this kind of money.
Any ideas on which option you would pick and why? P.S. I love code, and will do very little mobile but they are cheaper to use than a base and provide flexibilty to use mobile for wx spotting, etc should the need arise. Thanks to all!! All the best and I hope to QSO w/ you sometime!

An interesting note is that I explain how to do the complete freeband mod
without even having to use someone else's rdf and tpl files. I concider it much
cleaner cause lord knows what settings others set their radios to and you'll have
/their/ defaults.
You can find the faq at http://www.blarg.net/~tdragon/faqs/ If anyone has any
questions or problems, feel free to ask me for help.
BTW, this /will not/ work on the newest ft-50s. They've had the freeband mode
completely removed and if you try to set the radio to freeband mode, it'll act
strangely and erratically til you restore it to a valid country code.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 19/2330Z OCTOBER 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 19 OCTOBER AND FORECAST FOR 20 OCTOBER - 22 OCTOBER
STATUS INDICATORS SOL:GREEN MAG:** RED ** ION: ** YELLOW **

1A. SOLAR SUMMARY
Activity 19 Oct: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number for 19 Oct: 118/70

GOES satellite data for 18 Oct
Daily Proton Fluence >1 MeV: 4.5E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 4.00E+06 (normal)
X-ray background: C1.6
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
20 Oct 21 Oct 22 Oct
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 20 Oct: 115/66

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 19 Oct: Major storm

Estimated Indices 19 Oct : A K
Learmonth 51 4635 7544
Fredericksburg 35
Planetary 50

Observed Indices 18 Oct : A K
Fredericksburg 7
Planetary 10 1233 2233

2B. MAGNETIC FORECAST
Date Ap Conditions
20 Oct 25 Active
21 Oct 15 Unsettled
22 Oct 10 Unsettled
COMMENT: IPS Geomagnetic Warning 34 was issued on 16 October

and is current for interval 18-20 October.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
19 Oct Normal Fair-Normal Fair-Normal
PCA Event : No Proton/PCA Event In progress

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
20 Oct Fair Poor Poor
21 Oct Normal Normal Fair
22 Oct Normal Normal Fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
19 Oct 98

Observed Australian Regional MUFs:
Darwin: Near-20% above predicted monthly values.
Townsville: 15% above to 15% below predicted.
Sydney: Near predicted during local day then 15-30%
depressed.
Hobart: Near predicted during local day then 30% depressed.
Christchurch: 15-30% below predicted monthly values.

Predicted Monthly T index for October: 96

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
20 Oct 65 about 20% below predicted monthly values
21 Oct 80 about 10% below predicted monthly values
22 Oct 95 near predicted monthly values
COMMENT: IPS HF Communications Warning 59 was issued on 16 October
and is current for interval 18-20 October. Depressed propagation
conditions eventually started during local night in response
to the inceased geomagnetic activity that started October 18/2000UT.
Depressed conditions are expected to continue for at least the
next 24 Hours.

1044. Tapping Ladder Line

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-19 00:00:00 UTC
From: Max <maxwell@amdyne.net>
Message-ID: <01bdfaf4$ea01e980$LocalHost@brendaba>
Source record: 159915

Does anyone know of an easy way to strip the insulation off of ladder line in the middle of the feedline, rather than at the ends? I'm trying to connect wires to my ladder line without having to cut the ladder line and resplice it together, that reduces the strength of the ladder line. I'm trying to attach to the ladder line right in the middle of the webbing part, so the total feedline retains the support of the plastic webbing. Right now I'm just slowly whittling the plastic away to expose the wire, but I run the big risk of cutting in to the wire, not to mention the long time it takes to do it that way.

Thanks for the help.

You are using a highly unique and special situation. The issue
is general emergency preparedness.

In any case, is the requirement still as you describe for
an RO on a ship?

>Whether it be the maritime or amateur service, segregating operating
>and electronics knowledge should not be encouraged.

I never said it shouldn't be encouraged. I said in any emergency
it is operational skills and alternatives that make the difference.
In emergencies, the need for electonic expertise is probably
well after the fact.

Cheers,
Bill K2UNK

1052. AURORA WARNING: Middle Latitude Auroral Activity Warning - 19 Oct

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-19 00:00:00 UTC
From: oler@holly.cc.uleth.ca
Message-ID: <70em5s$bap7@mars.online.uleth.ca>
Source record: 159923
Cross-posted to: sci.astro,sci.astro.amateur,rec.radio.amateur.misc,rec.radio.shortwave

/\

MIDDLE LATITUDE AURORAL ACTIVITY WARNING

ISSUED: 06:00 UTC, 19 OCTOBER

/\

VALID BEGINNING AT: 06:00 UTC ON 19 OCTOBER
VALID UNTIL: 19:00 UTC ON 20 OCTOBER

HIGH RISK PERIOD: 19 OCT (UTC days)
MODERATE RISK PERIOD: 19 - 20 OCT

PREDICTED ACTIVITY INDICES: 70, 20, 12, 10 (19 OCT - 22 OCT)

POTENTIAL MAGNITUDE OF MIDDLE LATITUDE AURORAL ACTIVITY: HIGH

POTENTIAL DURATION OF THIS ACTIVITY: MAIN BELT = 12 TO 18 HOURS
MINOR BELT = 24 HOURS

ESTIMATED TIME OF OPTIMUM OBSERVING CONDITIONS: NEAR LOCAL MIDNIGHT

EXPECTED LUNAR INTERFERENCE: NIL

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM MIDDLE LATITUDES: GOOD TO
VERY GOOD

AURORAL ACTIVITY MAY BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

OREGON TO EXTREME NORTHERN UTAH TO EXTREME NORTHERN COLORADO TO
NORTHERN KANSAS TO MISSOURI TO KENTUCKY AND POSSIBLY NORTHERN
TENNESSEE TO NORTH CAROLINA.

ACTIVITY MAY ALSO BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

NORTHERN FRANCE TO GERMANY TO POLAND TO NOTHERN RUSSIA INCLUDING
PERHAPS A GREAT PART OF ENGLAND AND IRELAND, ALL OF NORWAY, MOST
OF
SWEDEN AND ALL OF FINLAND. OBSERVATIONS OF STRONG ACTIVITY WILL
ALSO
BE POSSIBLE FROM NEW ZEALAND AND EXTREME SOUTHERN AUSTRALIA.

NOTE: Serious observers interested in real-time conditions are encouraged
to investigate the SWARM software at:

http://solar.uleth.ca/solar/www/swarm.html

SYNOPSIS...

An unexpectedly vigorous interplanetary disturbance impacted the
Earth
late in the UTC day of 19 October. The disturbance, thought to be related
to
the coronal mass ejection from a recent eruption of a solar filament, is
currently associated with very favorable characteristics for producing
strong
levels of auroral activity. Already, auroral activity has intensified
notably
and minor to major geomagnetic storming is developing. The main phase of
the
disturbance arrived early in the UTC day of 19 October and is expected to
continue to produce periods of high to intense auroral activity over the
high
and many central middle latitude locations throughout the next 12 to 24
hours. The lack of lunar interference will result in optimal observing
conditions for most middle latitude dark-sky sites. This disturbance
should
begin subsiding later this UTC day (19 October) or early on 20 October.

This warning will remain in effect until 19:00 UTC on 20 October. It
will then be updated or allowed to expire.

Near real-time POLAR spacecraft auroral imagery is available at:

1053. AURORA WATCH: LOW Latitude Auroral Activity WATCH - 19 Oct

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-19 00:00:00 UTC
From: oler@holly.cc.uleth.ca
Message-ID: <70em80$bap8@mars.online.uleth.ca>
Source record: 159924
Cross-posted to: sci.astro,sci.astro.amateur,rec.radio.amateur.misc,rec.radio.shortwave

/\

LOW LATITUDE LATITUDE AURORAL ACTIVITY WATCH

WATCH ISSUED: 06:00 UTC, 19 OCTOBER

/\

VALID BEGINNING AT: 06:00 UTC ON 19 OCTOBER
VALID UNTIL: 19:00 UTC ON 20 OCTOBER

HIGH RISK PERIOD: 19 OCT (UTC days)
MODERATE RISK PERIOD: 19 - 20 OCT

PREDICTED ACTIVITY INDICES: 70, 20, 12, 10 (19 OCT - 22 OCT)

POTENTIAL MAGNITUDE OF LOW LATITUDE AURORAL ACTIVITY: LOW - MODERATE

POTENTIAL DURATION OF THIS ACTIVITY: MAIN BELT = 12 TO 18 HOURS
MINOR BELT = 24 HOURS

ESTIMATED TIME OF OPTIMUM OBSERVING CONDITIONS: NEAR LOCAL MIDNIGHT

EXPECTED LUNAR INTERFERENCE: NIL

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM MIDDLE LATITUDES: FAIR

AURORAL ACTIVITY MAY BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

OREGON TO EXTREME NORTHERN UTAH TO EXTREME NORTHERN COLORADO TO
NORTHERN KANSAS TO MISSOURI TO KENTUCKY AND POSSIBLY NORTHERN
TENNESSEE TO NORTH CAROLINA.

ACTIVITY MAY ALSO BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

NORTHERN FRANCE TO GERMANY TO POLAND TO NOTHERN RUSSIA INCLUDING
PERHAPS A GREAT PART OF ENGLAND AND IRELAND, ALL OF NORWAY, MOST
OF
SWEDEN AND ALL OF FINLAND. OBSERVATIONS OF STRONG ACTIVITY WILL
ALSO
BE POSSIBLE FROM NEW ZEALAND AND EXTREME SOUTHERN AUSTRALIA.

NOTE: Serious observers interested in real-time conditions are encouraged
to investigate the SWARM software at:

http://solar.uleth.ca/solar/www/swarm.html

SYNOPSIS...

An unexpectedly vigorous interplanetary disturbance impacted the
Earth
late in the UTC day of 19 October. The disturbance, thought to be related
to
the coronal mass ejection from a recent eruption of a solar filament, is
currently associated with very favorable characteristics for producing
strong
levels of auroral activity. Already, auroral activity has intensified
notably
and minor to major geomagnetic storming is developing. The main phase of
the
disturbance arrived early in the UTC day of 19 October and is expected to
continue to produce periods of high to intense auroral activity over the
high
and many central middle latitude locations throughout the next 12 to 24
hours. The lack of lunar interference will result in optimal observing
conditions for most middle latitude dark-sky sites. This disturbance
should
begin subsiding later this UTC day (19 October) or early on 20 October.

This WATCH will remain in effect until 19:00 UTC on 20 October. It
will then be updated or allowed to expire.

Near real-time POLAR spacecraft auroral imagery is available at:
http://solar.uleth.ca/solar
in the Aurora section (or see the side panel).

PLEASE REPORT OBSERVATIONS OF AURORAL ACTIVITY TO:
http://solar.uleth.ca/solar/www/auroras.html

** End of Watch **

1054. WARNING: Potential Major Geomagnetic Storm Warning (19 Oct)

POTENTIAL MAJOR GEOMAGNETIC STORM WARNING

ISSUED: 05:50 UTC, 19 OCTOBER

/\

USERS SUSCEPTIBLE to geomagnetic storms are encouraged to investigate
the software at: http://solar.uleth.ca/solar/www/swarm.html

(See Appended Comments for Synoptic Information)

HIGH RISK PERIOD: 19 Oct (UTC days)
MODERATE RISK PERIOD: 19 - 20 Oct

POTENTIAL LOW-MIDDLE LATITUDE STORM INTENSITY: MAJOR
POTENTIAL HIGH LATITUDE STORM INTENSITY: MAJOR TO SEVERE

POTENTIAL DURATION OF GEOMAGNETIC STORM: APPROX 24 TO 36 HOURS
DURATION OF MAIN BELT OF ACTIVITY: APPROX 18 TO 24 HOURS

POTENTIAL PEAK LOW-MIDDLE LATITUDE K-INDEX VALUES: 7-8
POTENTIAL PEAK HIGH LATITUDE K-INDEX VALUES: 8-9

EXPECTED DOMINATING LOW-MIDDLE LATITUDE K-INDEX: 6
EXPECTED DOMINATING HIGH LATITUDE K-INDEX: 6 - 7

POTENTIAL FOR LOW LATITUDE HF DEGRADATION: MODERATE
POTENTIAL SEVERITY OF HF DEGRADATION: STRONG MINOR
EXPECTED HF PROPAGATION CONDITIONS: GOOD TO FAIR

POTENTIAL FOR MIDDLE LATITUDE HF DEGRADATION: HIGH
POTENTIAL SEVERITY OF HF DEGRADATION: MAJOR
EXPECTED HF PROPAGATION CONDITIONS: POOR TO USELESS

POTENTIAL FOR HIGH LATITUDE HF DEGRADATION: HIGH
POTENTIAL SEVERITY OF HF DEGRADATION: MAJOR TO SEVERE
EXPECTED HF PROPAGATION CONDITIONS: VERY POOR TO USELESS

POTENTIAL RISK FOR GEOSYNCHRONOUS MAGNETOPAUSE CROSSINGS: 20%
PROBABLE

SUSPECTED SOURCE OF OBSERVED/EXPECTED ACTIVITY:
Coronal mass ejection related to a solar filament eruption.

--------------------------------- ---------------------------------
EST. POTENTIAL GEOMAGNETIC IMPACT EST. POTENTIAL IONOSPHERIC IMPACT

--- ---
SEVERE STORM : 30 % LOW LATITUDES : MINOR
MAJOR STORM : 40 % MIDDLE LATITUDES : MAJOR
MINOR STORM : 30 % HIGH LATITUDES : MAJOR-SEVERE
ACTIVE OR LESS : 0 % POLAR LATITUDES : MAJOR-SEVERE
--- ---
PROBABLE SI ASSOCIATION : 90% ESTIMATED GLOBAL IMPACT: MAJOR

ESTIMATED FORECAST PEAK PLANETARY 24-HOUR A-INDEX DURING STORM: 60 - 75
---- ---

COMMENTS:

A currently significant interplanetary disturbance is passing through
Earth's space environment. It contains some highly attractive conditions
for
producing periods of major to severe geomagnetic storming. The main phase
of
the disturbance has arrived and is expected to continue to influence
activity
for roughly the next 12 to 18 hours. Thereafter, conditions may begin to
abate.

** End of Warning **

Wow, that's a shame. Like you, I packed my gear away in the late 80s, although for different reasons (marriage+kids+school+job=no time). Just recently, when we moved, I thumbed through my old logbooks; comments like "great ragchew," notes about the person's family, interests, etc. abounded. I remembered friends like Ira WA1W (no kidding) and Jim (N1DDU) who were good friends made through ham radio.

In fact, about half of my log entries contain some personal notation about the other ham, indicating that I had acheived some reasonable level of communication with them.

Thankfully, having moved, I threw up a sloper, pulled the gear out of the attic, and am active again on HF.

It is interesting that I so much missed in ham radio what you claim to have never experienced.

Avery

1056. FT-8500 cable help

Newsgroup: rec.radio.amateur.misc

From here in Nebraska, I watched a nice but low Auroral arc from about
0400 to 0630 UTC. It was a nice bluish-green color, and had a few faint
rays, although it didn't get much more than 10 or 15 degrees above the
northern horizon.

jimheath@foothill.net "Jim Heath" wrote:

> No problem. But, what is the emergency?

If there was a real emergency, the proper request for a declaration would be directed to an FCC EIC, and the state of emergency would be declared by the FCC itself.

It was posted by someone who doesn't know where their caps lock key is, or how to spell rescinded, but wants a clear of channel for their very important net. A voluntary emergency is an oxymoron, not that the person posting the notice would know what that meant either.

Did anyone ever pull a stunt like this before or is this a first?

This all rings very true to me, except for the bit about the 31 foot paraboloid. I attended a presentation some years ago at the National Radio Astronomical Observatory, where they showed pictures and video of a reconstruction of the original antenna. As I recall, it was called something like a "Z Curtain", and was a rectangular zig-zag affair. The vertical parts of the zig-zag were the radiating phased array elements, and the horizontal parts performed the phasing function. He had it set up on a circular track so that the whole thing could be rotated.

Am I confusing Grote Reber's antenna with something that came later (or earlier)?

Indeed. Here is the *correct* text of the bulletin. You'll note it
was declared by the FCC, and *does* relate to the current
Texas storms.

ZCZC AG85
QST de W1AW
ARRL Bulletin 85 ARLB085
From ARRL Headquarters
Newington CT October 17, 1998
To all radio amateurs

SB QST ARL ARLB085
ARLB085 FCC VOLUNTARY COMMUNICATIONS EMERGENCY DECLARED

The FCC has issued a communications emergency at the request of
South Texas SM, N5NAV due to severe thunderstorms and flash flooding.
ALL AMATEURS ARE REQUESTED TO COOPERATE BY RECOGNIZING THE EXISTENCE
OF A VOLUNTARY COMMUNICATIONS EMERGENCY AND THEREFORE RELINQUISHING
THE USE OF FREQUENCIES 7285 KHZ (EMERGENCIES) AND 7290 KHZ (HEALTH
AND WELFARE) DURING THE DAY AND 3873 KHZ (EMERGENCIES) AND 3935 KHZ
(HEALTH AND WELFARE) DURING THE EVENING HOURS. THE FREQUENCIES ARE
TO BE CLEARED WITHIN 3 KHZ EITHER SIDE OF EACH FREQUENCY.

THE COMMUNICATIONS EMERGENCY REMAINS IN EFFECT UNTIL RESCINDED.

A quick scan of my '56 ARRL License Manual and '57 ARRL Handbook
indicates that "mic" and "mike" were used about an equal number
of times. I vaguely remember "mick" occasionally being used.

Howdy,

Ham radio is STILL a very interesting and entertaining hobby for me. I work 160 through .7 m wid the exception of 222 MHz band.

I wrk AM, FM, SSB, and CW. Six meters is still my favorite band. I started on six with a Heathkit Sixer way back in 1960. It was my first home station. Prior to that I used the club station at Rose Oolytechnic Institute.

The Sixer put out abt 3 W into a Hygain 5-el beam I purchased from Allied for $19. I STILL use this antenna for six meters.

Even though there have been great changes in ham radio, there is still something for everyone. When I feel the need to relax and forget about the cares of the day, I go into my shack, close the door, put on the headphones, and work a little CW. I never did get vy fast but a CW QSO sure takes ur mind off of everything else!

Much of the general public cannot think past 2-m FM repeaters when it comes to ham radio. Two-meter operation is the LAST thing I wud demo to someone who is interested in maybe becoming a ham.

Ham radio is fb as far as I'm concerned. Just don't get involved wid the whackos!

Whew! Quite a few pointed opinions in this thread, huh? Personally, I love CW. But to each their own. But we could do away with the CW requirement for all tickets. Then, if one wanted to operate in the CW-only part of a given band one would obviously need to know code ï¿½ a self-enforcing setup that provides its own incentive to learn code.

Of more interest to me personally is the legal power limitï¿½Iï¿½d like to see it raised to about 10 KW on 40 meters so we could blast those foreign broadcasters back to where they come from.

Have a good one, and 73

Avery OM,

I could not agree more. Every day, twice a day, I am on the air for 30-45 minutes, morning and evening, on my way to/from work. 40M CW mostly. Almost every day I have a great QSO with someone, and we cover all kinds of ground from family, QTH's, antennas, rigs, weather, bio's, you name it.
This morning on 40CW I got a call from an old friend from 18 years back. We both flew the same kind of airplane (Mooney M18 Mite) years ago, so we had a lot to talk about. Just one example.
There are LOTS of FB ops out there, at least on CW. I can't provide any info re: phone, since I am not a phone man.

73 and Enjoy,
Don, W6JL

I agree completely, Dave. If one plans to operate almost exclusively from a car or home (or perhaps even *mostly*), a mobile rig is far as away a better choice. My complaint is that so many people seem to push mobiles as *the* rig of choice, and neglect to point out that for many people, an HT is better. I can't afford a mobile (yet). For an only radio, an HT is the *only* choice for me - and for many others.

>
> Just curious.

I posted the question and then forgot about it - I should have replied
sooner. I will admit that the question was partly meant to be troll. I
was wondering if any the ham radio righteous were paying attention. The
r.r.a.m and r.r.a.p groups are littered with arguements over
technicalities when it comes to the rules.

To answer your question - you do not need a "license" if you only think of
a license as a government issued document with you name on it stating you
are authorized to transmits on some frequency. Your authority to operate
a CB station is granted in part 95. You are "licensed by rule" - but only
if you obey all of them (95.404). A TS850 cannot be used in accordance
with 95.409 which means you have no authority to use it as such. You are
essentially bootlegging on the citizens band 9is that even possible???
<grin>) - basically the same as operating without a license.

Bootlegging on the CB is not likely to "tick off" any licensed amateur since most don't give a rat's butt end about CB anyway. And as long as you are not causing harmful interference, I personally don't care either.

Happy listening, and good luck should you pursue amateur radio as a new hobby.

Regards

Curtis

1090. The ham genie

Genie

A man found a bottle and was dusting it off when a genie appeared. The genie said, "I will grant you only one wish, what will it be?" After thinking a moment the man said, "Well, I have plenty of money, a nice house and a wonderful family, but there is one thing I would like to have: a vacation. I know, I would like to go to Hawaii, but I don't like to fly, and boats make me sick. What I want you to do is to build a bridge from California to Hawaii so that any time I want to go there I can drive." The genie replied, "WOW, do you realize what a tremendous request that is? That is over a thousand miles and across probably the deepest part of the Pacific ocean. Can you comprehend how much steel and concrete that would take? That would be a tremendous undertaking. Are you sure there isn't something else you would like to wish?" The man thought for a minute and said, "Yes. Please explain hams to me. They are so boring, they repeat things, they never show any guts and they hide behind their mikes. How can anybody have a life like that? The genie replies
"Will that be 4 or 6 lanes."

I have two satellite dishes plus parts for the asking. I will be removing (via crane) unused dishes from the roof of a bank building in Milford, NH, where the studios for WNHQ used to be located. Once on the ground, these dishes will be free for the disassembly and taking promptly. The crane date is not yet known, but it will hopefully be on or shortly after the 30th of this month.

One dish is a six foot fiberglass, the other a 12 foot fiberglass. Both are fixed position. There is also the mount for a 10 foot fiberglass, the panels of which have recently been damaged, but I have yet to go up to see what condition they are in.

In addition, I have a 10 footer in storage in Concord, NH, that I have no plans to use (tho I need to deal with the Milford ones first).

If you are interested, please call me promptly at 603/228-9036 (d), 603/495-3983 evenings.

They could get their no-code tech license and have legal nets on 6m.
They could get their 5wpm tech license have have legal nets on 80,40,15,
and/or 10m.

What's the problem?

Greetings all,

We are extremely proud to announce the "5" star rating we just received on
our newest product Time-n-Measures !

Time-n-Measures brings a world of information to your desktop. Quickly
and easily determine what time and day it is anywhere in the world at
the click of your mouse. Times are displayed in both a customizable list
or on an interactive globe. Time-n-Measures conveniently and accurately
converts between English and metric measurements-distance, area, volume,
weight and temperature. This robust utility is an essential tool for
anyone involved in sharing information and fostering communication on a
global scale-business executives, sales professionals, shipping
companies, researchers, scientists, students and teachers.
Time-n-Measures is fun, easy and educational. Supports Windows 95/ 98,
and NT.

Our trial version is the real thing. Its not disabled in any way so you can
get a
TRUE feel for our product.

visit us at:
http://www.qmlabs.com/time-n-measures/
to download your FREE trial version and see what all the fuss is about.

Our sincerest thanks go out to all of our end users and their terrific
feedback that made this product
the best of its class !

Thanks again,

_____

The receiver signal does not flow through the tx bandpass filter, and VSWR foldback
is sampled past the tx bandpass filter. Since no power is reaching the REF side of
the bridge, the radio is attempting to produce full output minus any ALC activity.
First, run the VFO through the BPF transition steps. 3.999-4.000 and 7.999-8.000.
Does the relay activity sound the same? Or does it only sound like one relay energizing on the faulty segment as you rock back and forth through the transition?
If not, open it up and check the steering logic to make sure L3 segment is getting
relay driver voltage. If that's ok, time to go further.
By measuring RF power at the connector P5 (where the PA looks into the bandpass
filter), you should see 40 meter power just duckie into 50 ohms. Basic continuity
checks through the L3 bandpass filter SHOULD reveal a relay failure on one end
or the other. This is a common problem in "solid state" radios.
Good luck,

Hey, Chip...if you're working on the code, you're not the
problem and definitely don't fit the profile noted. Many
no-code techs have no ambition to learn code, and are
satisfied where they are, as VHF operators. That's fine,
just as long as they are HAPPY, and don't insist on screwing
up the entire hobby for the rest of us via their
unenlightened No Code International etc nonsense. THEY are
the target of the epithet that Vince delivered, not you and
others working to upgrade. I wish you the best of success,
just keep on track and don't be dissuaded by all the
nonsense you see posted here. THIS is not ham radio nor
anything near it. You will not regret your decision to
upgrade. It's the greatest hobby for those of us who know
and enjoy it. Sadly, too many people posting here have no
idea what it is they are really talking about. There's
plenty of room for all interests-old and new. And you may
find that with the skill you develop, CW is FUN!

Learning the code seems much harder than it should,
particularly if one has a mindset against "having" to learn
it in the first place.
If you determine that you WILL learn it, half the battle is
over right then. From there, use short periods of practice
regulary adhered to, (30 minutes tops) using whatever means
that seems to work out best for you. To build speed I used
the W1AW code practice sessions off the air each day, but
hey, that was before cassette tapes!

You beepers still don't get it, do you? The bands do not belong to you.
Eventually, the Morse hazing ritual will be eliminated. Doesn't matter really,
though, since those of your mindset have already killed the hobby prematurely.
Not to worry, though...commercial users will certainly establish a nice
memorial for the ham operators that made use of the frequencies before them,
back in the "old days."

I supposed FEMA and rural fire districts could be labeled "pretty boring
and useless," too. ;)

Ham do a lot in between disasters: build gear, refine what they've built,
have training sessions, have picnics together, work contests to refine
their communication skills, experiment with different antennas, ragchew
with one another (which builds fellowship amongst the local gang) -
a hundred other items could be included here.

With each contact we've polished our communication skills just a bit
more, tested the efficiency of our equipment, and had some fun!

Without daily contacts and weekend contests, I'd fail miserably
in handling emergency traffic at Oahu Civil Defense Agency during
our next hurricane.

>I have no idea why hams are generally considered boring people....

By whom? I have high regard for my fellow hams. People outside
ham radio probably think of us in the same manner they think
of say, coin collectors. It's not until a coin collector sits
the person down and explains the process of coin design, minting,
minute defects (which raises the value of a coin over its face
value), circulation, proof sets, et cetera, does that outsider
begin to appreciate that hobby. If folks outside ham radio
consider us boring, it's only because a ham (yourself?) hasn't
taken the time to thoroughly explain the ARS, its mission, and
its history.

Hey, that's a great idea. Actually I love those French cars, that still have that handle, which you can use for changing tires AND for cranking your car. If your battery was empty enough not to turn the starter motor, but not dead, you just needed to crank two or three turns and the car ran again. Came in handy sometimes.

Those crank handles are no absurde idea. Only absurde idea is to think they were absurde.

Given the alternative of cranking a few minutes OR waiting three hours for AAA to arrive on the scene, I would chose cranking. You seem to prefer wasting time. But then, Time is what Life is made of, and it never is a good idea to waste something as valuable as that.

>I already own a DJ191TH (HT) and love its ease of use and quality.

Doug,

Welcome to the hobby.

My first suggestion would be to not try to do everything at once, which is what it looks like you are trying to do with the list of radios above. Even if you have the money, you'll probably find that you don't have enough time <g>. I'd try to find some other local hams and play with their stations to get a feel for different bands and see which ones you like.

I do agree with getting separate radios for different bands. The current crop of HF/VHF (UHF) radios appear to be adequate, but are compromises compared to a dedicated HF radio.

If you are interested in code, make sure you get a radio with (or with options for) a narrow (preferably 500 Hz or less) CW filter. It really helps to eliminate QRM.

I'm not real familiar with the Yaesu 840, but I see that it is priced around $800. The manufacturers seem to shoot for various price points with different radios. The $800 range rigs are pretty much entry level. They'll probably give you solid performance, but will be lacking features on the higher priced models. If you get seriously into things, you'll probably wish you had those features. You may find that you're selling (at a loss) your almost new radio to upgrade, when buying the upgrade first would have made more sense. Another option is to buy a used radio. The going price seems to be about 2/3 the new

cost. I've bought used radios from dealers and had good luck.

I assume that you have heard bad experience with Kenwood HT's. I have been a fan of Kenwood for most of my ham career, and I think that they make very good (or great) HF radios.

Right now, I have 2 current generation HF radios, an Icom IC-756 and a Kenwood TS-870. The bottom line comparison (without getting into individual features) is that I find the 756 easier (and more fun) for routine operating, but in tough situations, I think I have a better chance of working 'the tough ones' with the 870. I also have an older Kenwood TS-940 which is about the best of the non-DSP radios. You can find these used for under $1100 and you might want to consider one instead of the 840.

Some things to think about,
Mark

Conversation is what you make it. If you didn't like the topic, you can change it can't you? People talk about radio's because thats usually the first thing that comes up. I've never had any trouble changing the subject. The part about talking to foreigners I don't understand. I don't talk to them any different than I do stateside. I've never viewed dx stations as cb'ers or children. Just another station as far as I'm concerned. I've spent hours ragchewing with dx. Ever try 160 m? Plenty of interesting conversation on that band. If you hear hams using banal conversation , maybe you should jump in and debanalise it. MK

1115. Help finding glue for Bakelite

Hello Manos,

I bought a FT990 a few weeks ago. I must say this is a great rig.
It replaced my TS930, which I'm gonna keep for backup radio.
the advantages are, nice, fast and quit tuning, built in keyer
very good receiver (same as the FT1000).

If you have the chance to buy one for a good price, don't hesitate...

What is the largest rotor which can be used in the Tri-Ex W51 tower? My rotor (HD-73) is too small for the larger 2 meter boomers I am using on the tower. After 5 years of twisting a 34' boom on 2M, it has taken its toll on the rotor. The HD-73 has been an inexpensive workhorse, but I need a larger solution.

The HD-73 just fits! I suspect that a Ham IV may just make it....

Thanks in advance and 73,

Al, NW2M

This appears to be a MARS net. They typically use 3 letters ahead of the number. I used to be AFA1xx which was Air Force MARS. It would sound like AAR is Army Mars. If you find NNN9xx it probably is Navy MARS. You may hear stations with call letters such as AIR, WAR, NMN, NAM, etc which are military stations which send health and welfare traffic via MARS operators. These are licensed amateur operators who have been granted licenses AND training by the various MARS groups and operate on frequencies assigned to the military for MARS purposes. You will usually find them a short distance outside of ham frequencies. Mods to XCVRs for MARS frequencies is legal for MARS licensed operators.

Fully legal. Your state MARS directors for Navy, Army, and Air Force probably would be glad to have you join.

1123. Routing HF antenna coax and power on Ford Explorer?

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-21 00:00:00 UTC
From: Jeff Crilly N6ZFX <jeff@communities.com>

I want to put my TS 440 HF radio in a 96 ford explorer.
For an antenna I've got some ham sticks for various
bands that I've successfully used in another vehicle.

My problem is that I have no idea how to route
the radio power cables from the battery, and the
antenna cable into the interior.

(I'm sure someone out there has solved this
problem already... I did check dejanews but
nothing popped up.)

Is there a plug in the front to get from the engine
compartment to the interior?

I'm thinking of mounting the antenna on the rear
bumper ball hitch mount. Is there a place in the
back where I bring the coax in?

I'd rather not drill holes, but I suppose I could
if they aren't visible.

Also, should I ground the radio chassis to the car
car body? I did this in my other vehicle, but with
this talk of noise from the fuel pump on the explorer
maybe I should skip it.

Thanks

jeff

I use a Ham IV in my WT51. It is a bit of a trick to get it in the tower,
you have to position it just right for it to go between the bracing, but it
will fit. This tower/rotor is in the So. Ca high desert area and with a 18
foot mast and 6 antennas totaling about 15 sq. ft. of wind load, it has
survived exposure to 50-70 mph winds on many occasions.

1131. Lightning Protection

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-21 00:00:00 UTC
From: Douglas Keachie <keachie@swland.org>
Message-ID: <362E5377.3976D68B@swland.org>
Source record: 159758

My house sits on a granite knoll about 100 feet in diameter at the top, sloping downwards at perhaps 20 feet per 100 to a radius of 300 feet on two sides and 5 feet per hundred on the other two sides. It is a one bedroom wood frame house, surrounded by 12 ponderosa pines, ranging from 50 to 100 feet high. Lightning storms due occur from time to time in the foothills, elevation 2,000 feet.

I have a couple of lengths of 3 inch sewer pipe extending up to the peak of the house (15 feet off the ground), offset from the house the distance of the eave, so that it touches the eave as the final 4 feet reaches to the antenna rotor box, and another 4 feet goes up to the antenna, the biggest one RS sells.

The previous owner built this, and has loose fitting wires with no insulators at all on either end, joining the mast 2 feet above the roof. One was just attached to a roof venilator, just above the hot water heater.

What I need to know is:

Should I place insulators at both ends of the guy wires, if so, how far from the ends, or end ? Should I use marine grade stainless backstay cable which I have in quantity, the regular RS cable, or nominally non conducting nylon climbing rope ? Where do I stick what in the coax line to the amplifer and then to the switch between the tv and the FM to shunt lightning strikes? Should the guy wires have 8 gauge copper to ground rods ? I have some huge (1 foot long) insulators leftover from the Presidio, any harm in using them ?

My AM antenna is about 200 feet of 22 gauge wire thrown up in the trees and pointing towards the Bay Area. Gets KSFO fine most of the time, KGO from time to time. I have the potential to extend it 1,000 feet. Worth the bother ?

My phone line I run through a Panamax protector. I have a CB antenna up one tree next to the house. I plan on disconnecting the AM and CB in the event of storms, but I can see driving off in sunshine, and forgetting to disco. Any sugesstions ? Beyond having insurance paid up ?

thanks in advance, can pay with tractor time, if you'll ship it to and from <grin>

Keachie

The Astron supply will operate as a constant voltage charger...
it will keep the battery charged (just donot set the PS to 14+ volts..
the voltage AT the battery connection/after the diode should be
13.8v UNLOADED....this way it will not boil the battery dry!)
This is how commercial battery chargers at telecom sites work.

The Astron recommended series Schottky diode will drop about 0.4 v.
so the battery will not get a full charge. A shorting switch around
the diode would charge it a little more when not in use. Or a real
battery charger can be used when the battery is not in use.

I'm flabbergasted! All citizens of Nepal should boycot RS.
The ARRL should send a fact finding junket.
The next time I hear a station from Nepal on 2 meters, I will ignore him
out of protest.

If by "can't afford a mobile" you mean you can't afford a car, then I
agree with you. But if you meant a mobile *rig*, then I disagree. You
can buy a used mobile rig for about the same money as you'd
spend on a used HT. (Buying new is for people with more money
than sense, let some other sucker take the depreciation hit that
comes with opening the bubble wrap.)

That gives you a much more robust receiver, which means less
pager crud, and more transmit power, which means you aren't
a pain to listen to on the repeater, as well as enough audio to be
heard easily in the car. With a HT, you wind up having to hold the
thing up to your ear to monitor over the road noise. That is unless
you own a luxury car, and if so why are you complaining about the
cost of a radio? :-)

You can also use the mobile rig at home, use a slide mount so
you can move it easily from car to house and back. All you need
in the house is 12 VDC and an antenna. 12 VDC can be had on
the cheap with a battery and charger (that gives you emergency
power too).

The only advantage of the HT is that it can be hung on your belt
when you're walking about. That's a bit tough to do with a mobile
rig and gell cell unless you have an Alice rig to keep it from dragging
your pants down. :-)

I know people who do carry their mobile and a gell cell in a backpack,
however, so this is possible. It gives you a hell of a portable signal
in a manpack configuration. (Of course you look like a geek, but
then hams often look like geeks anyway.)

One simple soloution would be to use the all *NEW* mini circuits
HELA-10 this little amp looks as an IC with 16 pins but delivers
1 watt output 50-1000 MHz with 10 dB gain. Noise figure is 3.5 dB.
IP3 out +47 dBm and IP2 +88dBm
Price 20 dollars...

Cheers

This has got to be a troll but still looking for the best in people I
reply.

The AAR callsigns are Army MARS callsigns. They are not "green" they
just operate under a strict formality of operations. They are most legal.

That's really not fair.
Most hams are not lazy; they simply don't have the
technical knowledge to comprehend digital networking,
much less "improve" it. This doesn't make them "bad"
or "lazy." Technology is simply changing far too quickly
for the average hobbiest to keep pace and it's unreasonable
to expect them to do so. I barely have time to say "wow"
before some new wonder comes down the pike, making the
last one obsolete.

The FCC tried in 1974 to open the ham bands for true
exploration and experimentation by adopting
a bandwidth-based, rather then mode-based, frequency allocation.
Any emmission would have been "kosher" as long as it met
the standard. The ARRL, short-sighted as always, talked them
out of it. Darn pity. We might actually have been able
to do something "new" and useful by now. No... we can't compete
with the young turks in multi-million dollar labs and big funding.
A few of us, like perhaps you, can hope to make some progress
in our limited fields of expertese. Don't damn everyone
else for being different from you.

That was Army MARS (Military Affliated Radio System).
And yes they are legal. They are hams of course, with
membership in MARS.

Al OM,
The HAM I through IV rotors will fit. I have been using a HAM II for
20 years
now, turning stacked vertical 12 el yagis on 2M, over a TA-33 tribander,
over
a HyGain 2L 40M beam on a 13 ft mast. Probably 200% overload at least,
on a
W-51 tower. 15 years in So Cal and 5-1/2 years in Washington State
(but I did
not have thte 2M arrays up there). You may want to replace the stock
(pot-metal?)
brake locking gear with a stainless one from CATS antennas in Ohio.
Mine
developed a crack after >10 years, which I discovered during a routine
inspection,
although it did not fail to function. You can find Ham II's around
cheap if you
scrounge.
Any 2M antenna seems a trivial load to me.

1170. Hamfest in Montreal Oct 24th

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-22 00:00:00 UTC
From: Michael Black <blackm00@CAM.ORG>
Message-ID: <Pine.GSO.3.94.981022164437.1363B-100000@Stratus.CAM.ORG>
Source record: 159702

I just posted a message about this in one of the local newsgroups, mtl.vendre-forsale but then I though perhaps there are some local hams who might be reading this newsgroup and not the local ones.

le Club Radio-amateur de la Rive-sud de Montréal is having their annual hamfest this Saturday on the South Shore of Montreal. I guess it's fairly insignificant compared to the monster events elsewhere, but it's healthier than the other ones I've seen locally. Of course, a lot of computer equipment shows up, but I've found there's always something I buy. Picked up some nifty surplus boards last year for fifty cents each, and the parts were well worth much more. The hamfest is well attended, both by sellers and buyers, and there is usually a number of dealers with tables.

Anwyay, the information below is from the club's website at http://www.cam.org/~ve2clm If anyone needs further details, I'm sue contacting someone at the club will provide it.

Radio's don't list!!

When the VEs turn new hams lose, there is no work done or coaching on what to do, or not to do! That is the problem with alot of this stuff we bitch about day after day.
Here is a list of the new annoyances, that are driving alot of us nuts!!!!!!! Things not to say.

* The continous asking for a signal report, or how am I sounding, and doing it through a repeater! Referring to a signal report in "pounds".
* 10 codes.....using a repeater, when the person you are talking to, is two cars in front of you!! Referring to a signal +10 or stronger, as the strawberry patch!!! Using Q signals on phone!!!
* Unnessary lingo, such as:
I heard that, I did.....Thats for sure.....making the trip.....I guarentee you..... Channels..... boy, your loud!!!....the constant use of the word, "there".....and the list goes on and on! Why can't we just talk? Do you say all of that on the phone? Whats the next step, testing sessions in truck stops? How about a Ham fest at the weight scales??? Yeah, I know its ridiculous, but none of it would shock me! Oh, and PLEASE refrain from giving "mile markers" over Ham Radio.....geeezzz!!!

Source record: 159706

Unless I witness whatever crime this person committed, why on earth would I ever testify against them either in court or in a letter-writing campaign? Thou shalt not bear false witness, etc? As an ex-police officer, this type of thing is not only immoral but would be an offense (filing a false report) since I know nothing about what this person has done, nor have I witnessed it.
How can one ask me to write in for you or "the hobby" in light of the above. I think "the radio is drawing power but the SWR is 5:1".
Besides, like the FAA, the FCC is a pussycat. Why do you think they have the ARRL do all their compliance monitoring for them?
The only organizations I know of that will "go after" (and eliminate if need be) people based on no proof anonymous accusations whether they are guilty or not, can not be mentioned because if Janet sees the posting, she may "sic" the jackboots on me and my kids (and my pets) for no reason other than she doesn't like my opinions! Uh, oh...I'd better start watching out for approaching helicopters and cattle trailers now....
All the batf...I mean All the BEST to you... :-)...a little typo there...and God bless. (oops, now I've REALLY gone and done it...now that I said God bless, I'll be considered a religious wacko "Cultist"!)
Me and my big mouth...goodbye all...it was nice knowin' ya...I think I hear helicopters...(what's the matter, can't ya' take a joke?)

Sorry for the crossposting, I hope no one is offended by it.

I have a TS-820S that didn't come with a manual. I need to know
what pins in the 9-pin connection on the back need to be shorted so I can
use the VFO (the connector that usually does this is missing too!) If
anyone knows about this, and/or has a manual they could photocopy for me,
it would be greatly appreciated!!
Please reply privately via e-mail - I don't always have the time
to comb through the newsgroups. My email: gtmiller@buffalo.edu

1180. Ohio/Penn DX Bulletin #380

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-22 00:00:00 UTC
From: kb8nw@barf80.nshore.org
Message-ID: <$opdx.380.1998@ampr.org>
Source record: 159712
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.dx,rec.radio.info

SB DX @ WW $OPDX.380
Ohio/Penn DX Bulletin No. 380

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 380
BID: $OPDX.380
October 23, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, N4GN, KE5BR, KL7J, NA7DB, W0YG, CX1JJ, CX1JK, CX5JF, FR5FC, G4BUE & DX News Sheet, HA/W0YR, LX2AJ, VK6APH, YL2TQ and ZP5MAL for the following DX information.

EDITOR'S NOTE: Due to the upcoming CQWW SSB DX Contest and some additional announcements of stations participating in the contest, I felt that an earlier release of the OPDX bulletin was warrented.

A22, BOTSWANA. Charlie, W0YG, will be returning to South Africa on November 4th. He states that he will probably not operate from there this trip, but he will go to Botswana on November 15th, where he will again be active from his vehicle as A22/W0YG. He will attempt some 80 meters operation when in the bush, but he is not optimistic because mobile antennas on the low bands are more or less dummy loads. Charlie will be on the WARC bands regularly as well as the normal bands, 40 through 10 meters. As before, QSL to W0YG. SPECIAL NOTE FROM CHARLIE: "Please do not include cards from other operations in the same envelope with A22 cards. Send requests for QSL's from other operation in separate envelopes. I do not yet have cards from my recent A22/W0YG or Z21/W0YG operations. While they were ordered immediately upon my return, they have not yet been shipped. I have been assured that I will have these in hand the first of next week, so I should be able to at least get some cards out before I leave."

CP6, BOLIVIA. Olli, OH0XX, will operate CP6AA in CQWW SSB Contest as a Single Op/All Band entry. QSL via Suite 599, 1313 So. Military Trail, Deerfield Beach, FL33442, U.S.A.

CX125, URUGUAY. A group of operators in Salto City will participate in a special event station on October 30th, 31st and November 1st. They will be celebrating the "125 ANIVERSARY" of an important local Institution. They will be active on 2, 10, 15, 20, 40 and 80 meters during the 3 days.

Five stations will be active working on SSB and CW using the special callsign CX125J. Special QSL cards and Diploma will be available. Listen for details. The QSL to: CX-125-J, P.O.Box 164, Zip.Code:50.000, Salto, URUGUAY. NOTE: For any requests, suggestions or more details; write to: P.O.Box:164 Zip.Code:50.000 Salto URUGUAY or by E-mail: tvnet@adinet.com.uy

CX5, URUGUAY. "The 59(9) DXReport" states to look for Jorge, CX6VM, to sign CX5X in the CQWW SSB Contest, most likely on 10 meters. QSL via W3HNK.

E3, ERITREA. Zoltan (Zoli), HA5PP, is currently in Ashmara, and has just received the callsign E30HA. He has been on 10 meters and will try to get on 20-15-10 meters during his stay. At the moment, he is only on SSB, there may be CW later. He is using a TS-50 with some antennas fashioned from tubing and 50 meters of wire and an MFJ tuner. QSL via HA5YPP (his wife).

FS, FRENCH ST. MARTIN. Look for Brian, N3OC, to be active as FS/N3OC from October 27th through November 3rd. Activity will be mainly on 160, 30, 20 and 6 meters. Also, look for activity on 20 meters RTTY. QSL via homecall.

JW, SVALBARD. The "DX News Sheet" reports that Tor, LA9XGA, will be active October 30th to November 4th as JW9XGA from Longyearbyen. Activity will be on CW/SSB 160-10 meters. QSL via home callsign.

JY, JORDAN. "The 59(9) DXReport" states that Ken, K4ZW will be active on November 5-16th as JY8ZW, especially on 160 and 80 meters, mostly CW and 10 meters.

QSL INFO AND NEWS......
QSL information for the following Scouting Callsigns: LX1JAV via LX2AJ, LX9LGS via LX2AJ and LX9KGS via LX2AJ.

TO150 DXPEDITION. Activity is planned on top of "Piton des Neiges", an island off of Reunion, with an altitude about 3069 meters. Activity will last for 3 days. On December 18th, 19th and 20th, look for TO150 (Tango Oscar One Hundred Fifty) to be activated by 10 operators on CW/SSB/RTTY on 160-2 meters. A special QSL will be available. The special callsign is in celebration of the 150th anniversary of abolishing slavery on Reunion Island on the December 20, 1848.

TN, CONGO. Haxel, TN7OT, is back in the Congo doing missionary work for another year. Hazel's home call and QSL route is AL7OT. Her home is Soldotna, Alaska, and she frequently contacts KL7J. She has 100 watts and a dipole and will work a few stations after contacting Alaska usually on her sunset or sunrise.

VK9X & VK9Y, COCOS KEELING AND CHRISTMAS ISLANDS. Jack, HB9TL, and Erwin, HB9QR, will be active on all bands from 14 to 28 MHz as follows:
Cocos Keeling - VK9CTL and VK9CQR October 24th to 31st
Christmas Island - VK9XTL and VK9XQR October 31st to November 14th
QSL direct to HB9QR only - Erwin Fink, Toedistr. 7, CH-8572 Berg, Switzerland with SASE and 2 IRC or 2 green stamps. They request that

when calling, use complete call signs only (PLEASE) - no part callsigns.

VP2E, ANGUILLA (Update). Joe, W1EK, reports to OPDX that his assigned VP2E callsign will be VP2EJR. He will be on island only October 21-26th inclusive.

XR3, CHILE (Update). XR3J will be active during the World Scout Jamboree from December 28th to January 5th. Operators are: PA3BAR, HB9AOF, M0AEU, PA3GVR, ZL2APE, OH2BXB, K2BS, PY2RAR, PU5TAZ, PD1AIL, OZ1JRD, LW4DYZ, LW1ECO, PA3EFR, LX3DL, LX2AJ and G7VFD. QSL via HB9AOF.
Also, look for XR3M to be on the air. Operator will be CE3/W9FW (ex-CE0/W9FW, XT2JB, TU4EI, TU5EV). Special cards will be printed and W3HC will furnish the cards and be the manager.

XW, LAOS. The "DX News Sheet" reports that Shin, JA7SGV, hopes to be active now until October 30th from the XW8KPL club station while working in Laos.

XZ, MYANMAR. The following is a press release by Dan Brown, NA7DB:
"XZ1N will return to the airwaves beginning November 21, 1998, through December 6, 1998. The operation will take place from Yangon, Union of Myanmar. Most of the team are members of the Central Arizona DX Association, with some members of the original XZ1N operation in 1996. This will be a multiple station operation covering 160 through 10 meters including the WARC bands. Modes of operation will be CW, SSB, & RTTY. There will be entries in the CQWW CW Contest and the ARRL 160 meter contest.
CADXA and the team members are very honored to be invited back by the government of Myanmar. Since there have been no other Amateur operations for the last two years from Myanmar, we are sure the DX community will be as excited as we are. The solar cycle upswing leads us to believe this can be a very successful operation. We are also honored to have Bob Brown, NM7M, do our propagation studies.
Original team member WA6CDR, Robin, will be returning and will dedicate the bulk of his time to 160 meters. Planned improvements over his successful 1996 efforts give us great hope for even greater success in 1998. Returning YL operators, Millie, WY7K, Sally, KM5EP, and Jessica, N7ZRD, will give the operation a unique flavor and an added incentive for those seeking YL contacts with a rare country. Mike Bill, N7MB, a veteran DXpeditioner and current President of CADXA, will be active on CW and RTTY.
Additional team members, web site address, propagation information, and other details will be available in upcoming news releases."

YL80, LATVIA. Amateurs from Latvia are allowed to use the special prefix YL80 in October and November to celebrate the 80th anniversary of the proclamation of Republic of Latvia (November 18, 1918). An award is available for contacts made during this period. For further information, please visit the WEB site: http://www.hamradio.lv/

ZF2, CAYMAN ISLANDS. Robert, KE5BR, will be operating under the callsign of ZF2UH again this year from Georgetown, Grand Cayman, from November

6-14th. He will work 40 meters in the early mornings SSB and all bands during the day. During evenings he will work 10 meters, and after a hour or so on SSB he will go to CW (as he states, "the five hams on Cayman don't operate CW and there are those who need CW contacts from ZF-land!"). QSL via KE5BR. SPECIAL NOTE: He will also be operating on the NOVICE CW bands, and asks that no calls other than NOVICES call him while in the NOVICE sub bands. Robert enjoys giving the new comers the thrill of DXing and getting a color picture QSL for their collection. He will QSL all NOVICE contacts as soon as he returns to the states. Robert states, "During the day I will be all over the bands and will be giving daily info to the Kansas City DX Club and the Santa Fe Trail ARC members of my activities so they can put it out on packet. Thanks again and hope those who need ZF will try to get me."

ZP6, PARAGUAY. Juan, ZP5MAL, will be active during the CQWW SSB Contest as ZP6T, Single Operator, Single Band (15 meter, HP). QSL via ZP5MAL. The the Paraguay bureau is also "OK".

MORE CQWW SSB DX CONTEST STATIONS (Quick List). The following was put together from various bulletins (OPDX, DXNS, DXNL, ARRL DX Bulletin, The Daily DX, National Contest Journal, QRZ DX...(ed. GEEE... I hope I named all of them... TNX to all).....

This new ham (tech-PLUS) is looking for a good entry level HF that will last and provide years of service. If it is relevant, I should be upgrading to General by the end of the year. Will this unit provide too much of a challenge at 50W for voice on 10M..or for CW for that matter..and ruin the fun, or do you think it is sufficient?
If you are familiar w/ this unit, advice is appreciated. I have already received great and kind advice from many in here which I appreciate sincerely!
Ps>I don't care about "looks" (lots of $2000.00 knobs) but I want a unit with which one CAN work the world effectively, even if skill is inolved...and if it WORKS for this purpose, I will not be "upgrading" my radio...instead I'll use the Scout for my only HF rig. With this in mind, heeeelp :-)
Thx!! All the best.....

Back to DEFCON 5 Mr Herman...thx for the clarification....locked and loaded there for a minute :-).....but if I hear the clown, I will join the campaign! (That is IF I know for certain the person using these call letters is in fact the owner of those call letters...which I assume the writer knows for certain, either because they know the clown's voice or they have "birdogged" his signals to his home).
So....even if I HEAR the clown...I still won't be writing. Hopefully, the people the writer was addressing all know for SURE who is transmitting illegally, despite the call sign given. I now defer to my earlier post, minus the imminent missile launch status..:-)

> --

I'm not sure what the origional poster had in mind *exactly*, but I was referring to broadcasting. Playing PBS radio on the ham bands. Both ARRL and K1MAN *own* frequencies and if you happen to be on one when they start, too bad. In the *old days* ARRL had a special dispensation to do it and if anyone else tried it their license was in jeapordy. Nowadays I'm not sure exactly where the law is, but with lax enforcement I suspect anyone could start up with little worry.

> nuts!!!!!!!! Things not to say.
> * 10 codes........> KC4KMG

Actually when FM first started being used on 2 meters the 10 codes were used by many VHF'ers and considered normal operation even though the the HF guys kinda snickered. Like much of ham jargon it was picked up from other radio services. That was before repeaters became popular and the rigs were old surplus police and taxi tube radios. But of course times change.

Everyone I know that has one, likes it. On CW they have a noticible
small frequency jump (correction) every so often that can be annoying.
It's not noticible on SSB. However the *lack* of bells and whistles can
be refreshing....

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 22/2330Z OCTOBER 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 22 OCTOBER AND FORECAST FOR 23 OCTOBER - 25 OCTOBER
STATUS INDICATORS SOL:GREEN MAG:GREEN ION: ** YELLOW **

1A. SOLAR SUMMARY
Activity 22 Oct: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number for 22 Oct: 115/66

GOES satellite data for 21 Oct
Daily Proton Fluence >1 MeV: 1.1E+06
Daily Proton Fluence >10 MeV: 1.9E+04
Daily Electron Fluence >2 MeV: 2.30E+08 (moderate)
X-ray background: B7.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
23 Oct 24 Oct 25 Oct
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 23 Oct: 115/66

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 22 Oct: Unsettled to active

Estimated Indices 22 Oct : A K
Learmonth 18 3333 4433
Fredericksburg 16
Planetary 20

Observed Indices 21 Oct : A K
Fredericksburg 16
Planetary 23 4454 2443

2B. MAGNETIC FORECAST
Date Ap Conditions
23 Oct 15 Unsettled
24 Oct 12 Quiet to unsettled
25 Oct 10 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 35 was issued on 20 October

and is current for interval 21-23 October.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
22 Oct Fair-normal Normal-poor Normal-poor
PCA Event : No Proton/PCA Event In progress

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
23 Oct Normal-fair Normal-fair Normal-fair
24 Oct Normal Normal Normal
25 Oct Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
22 Oct 35

Observed Australian Regional MUFs:
15 to 40% below predicted monthly values

Predicted Monthly T index for October: 96

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
23 Oct 70 15 to 30% below predicted monthly values
24 Oct 90 near predicted monthly values
25 Oct 90 near predicted monthly values
COMMENT: IPS HF Communications Warning 60 was issued on 20 October
and is current for interval 21-23 October.

That has to be the longest word I've ever seen!

I hope you don't send code like that on the air, OM. The space between words is supposed to be three times the space between the letters of a single word. What you've written looks as if it's a single word containing dozens and dozens of letters.

I'm glad you added that last paragraph, Gary, for the environment in which
sea-going radio equipment resides means even the secondary gear is
not always going to be available when the primary equipment fails.
Salt and moisture become permanent and destructive residents. Eliminating
the ROs might have saved the shipping companies some money, but sadly,
the costs will now be lives lost.

Sadly, no. The maritime industry was not immune from the down-sizing virus. Now the lives of our merchant mariners will depend solely upon digital communication equipment residing in a highly corrosive moist salt air environment.

>>Whether it be the maritime or amateur service, segregating operating
>>and electronics knowledge should not be encouraged.

>I never said it shouldn't be encouraged. I said in any emergency
>it is operational skills and alternatives that make the difference.
>In emergencies, the need for electonic expertise is probably
>well after the fact.

Here's a counterexample: 1.5 weeks ago Hawaii participated in the ARRL's Simulated Emergency Test; the "emergency" was hurricane-related flooding on a massive scale (27 inches of rain in 24 hours). I was NCS for the county civil defense RACES. The exercise was to begin at 0800, but apparently Murphy had had too much coffee - he struck us. We had equipment failure - a battery of soldering irons and expertise were needed to get us on the air. (Our equipment is tested monthly, but a tropical environment can take its toll in short order.)

Again, please don't discount the need for electronic expertise during emergencies.

Gentlemen,

I am now attempting a letter writing campaign in reference to amateur radio station K1MAN as operated by Glenn Baxter.

The FCC has refused to press anything in this case even though they admit Mr. Baxter is in violation of several FCC reuls and regulations.

As amateur who love our hobby we must take a stand somewhere and this to me is a good start.

Please send your comments about K1MAN as operated by Mr. Glenn Baxter to:

US REP. Tom Allen
ATTEN John McLaughlin
234 Oxford Street
Portland, ME 04101

Don't do this for me, do this for the hobby we have all come to love.

I'm using a Ham-M rotator in my WT51, its a close fit but it will go
without too much trouble. I dont think you can get much bigger rotators in
there though.

Actually MARS nets are more regimented than HAM communication and the
'out' you heard is part of net protocol. If you listen for a while,
you'll here that there is a very definite protocol that is followed
more closely than on ham radio nets.

Also, a comment, while you have to be a ham to get a MARS license, you
cannot use your ham license on MARS frequencies. IOW, you need to get
a MARS license (all you have to do is apply for a temporary permit -
there is a test later) before transmitting on these frequencies.

First of all, Don, if you're referring to the output power on AM or FM that is the output power. For SSB, just turn up yourMIC gain control on the outside of the radio. Although 40watts output on AM/FM is kind of low, I believe that in the instruction manual turning the DRIVE control will increase the output power. Going inside of the rig to boost the output power on AM or FM can be injurious to the TS-850S in that the radio doesn't have the adequate cooling ability for the 100% duty cycle that you're looking to get out of the rig. For SSB operation, the TS-850S/AT will drive the Ameritron 811 amp just fine.

tell you about. Because of that event, and a succession of other
events, what you're listening to right now is my final broadcast on
the air."

A search for interesting news events in Pahrump about a year ago reveals
this article...

http://www.lasvegassun.com/sunbin/stories/archives/1997/jun/06/505971364.html

As the URL implies, this is a news article from the Las Vegas Sun on
June 6, 1997. It begins...

Pahrump substitute teacher arraigned on sex charges

PAHRUMP, Nev. (AP) - A 32-year-old Pahrump substitute teacher
accused of befriending boys by giving them alcohol and marijuana
and then soliciting sex acts from them was arraigned Thursday on
11 counts.

The substitute teacher is accused of having homosexual relations with
several Pahrump teenagers, who are not named in the article. The
teacher, who was convicted in May 1998, was HIV positive. See also:

http://www.lasvegassun.com/sunbin/stories/archives/1998/may/07/507185157.html

Could this be connected to the "threatening terrible event" that
happened to Bell's family?

>

I just got a new explorer and would also be interested in knowing about what others have done. The firewall does not seem to have any extra holes and those that are there have no room to squeeze power cables through. It looks like the only solution is to drill through the firewall. That does not seem like that big of a deal but I would like to know what locations for drilling others have found useful or if there really is a useable hole that goes through the firewall someplace.

I would also like to know if anyone has any shortcuts for fishing the coax from the roof to the floor. It looks like the only place to do it is the brace between the front and rear doors.

I am going to install a 2m/70cm rig very soon and am waiting on an hf rig till I get to see Yaesu's new mini hf rig that is due out 12/1.

Well, that remains to be seen. It should be noted that in tropical climates,
spares should be in hermetically sealed containers. The military has used
"canned" spares for tropical environments for a long time. I got some mil
surplus 3CX100A5s that were still in their cans after having been on ships
for a very long time (1979 date code). When I got out the can opener and

opened them up, the tubes were as bright an shiny as the day they left the factory. Full equipment spares are also stored and shipped in dry nitrogen pressurized containers. Flyaway sat packs, complete with antenna, are routinely packed this way. They also are as factory new when the seal is broken. If a little intelligence is used, corrosion of spares should be a non-problem.

Corrosion of the installed primary equipment is more of an issue, of course. Use of tropical conformal coatings offers good protection for circuit boards, however, as does use of corrosion resistant materials for exposed equipment, and good seals on equipment enclosures. In port maintenance by the shipowner's tech support contractor should deal with most other problems before they become serious (I know that's sometimes been a joke in the past, but now it has to be taken more seriously since there's no RO on board to take care of things). We aren't talking about HF wire antennas strung from the masts anymore. Most of this stuff is ruggedized for the intended environment, and is fairly low profile so it isn't likely to be torn away by wave and wind.

I apologize if these questions take up unnecessary bandwidth. I searched for a FAQ at www.faq.org, and couldn't find one. If there is a FAQ, and answers to these questions are in it, I would be grateful for a pointer. With that said ...

I do a lot of wilderness and backcountry travel, both in the USA and in South America, and am a Wilderness First Responder; I am interested in using 2-meter and 70-cm primarily for use in case of backcountry emergencies (I can talk to my scattered companions using FRS). I have started studying for my Technician license, but the materials I am using don't answer some basic questions.

* Repeaters in different places receive on different frequencies. To use a repeater in a different part of the country, or in another country, I have to know what frequency to use. The only way to find that out is to look it up in a book, such as the ARRL Repeater Directory. So if I am out in the Sierra Nevada, say, I should find out the local repeater frequencies ahead of time, write them down, and bring them with me. Is that all correct, or am I missing something?

* Some repeaters are available only to members of the clubs that pay for them. While not disputing the principle, how does that work when you are traveling away from home? If I have a wilderness emergency, am I limited to the range of my HT without a repeater?

* Some (most? all?) autopatching services on repeaters are available only to members of the clubs that pay for them. Again, while not disputing the principle, how do I access autopatch while traveling away from home -- for example, in the wilderness? Am I limited to seeking help only within the range of my HT?

I appreciate any help you can give me.

>73, Hans, K0HB

Hans, the problem I had with K1MAN had to do with intentional interference. A number of years ago I was in QSO on 20 meters when K1MAN started his broadcasting. He did not come on and ask if the frequency was clear, he just started his broadcast. I was unable to continue my QSO and since he was just transmitting it didn't matter to him if someone was using the frequency or not.

As defender of the value of HT's, I was tempted to insert a "funny"
diatribe about scratchie-talkies and how you should get a mobile
radio. I decided nobody would understand my odd sense of humor,
least of all Steve, and someone would MIS-understand and be offended.

> * Repeaters in different places receive on different frequencies....
<snip>
> ... I should find out the local repeater frequencies ahead of time,
> write them down, and bring them with me. Is that all correct, or am I missing
> something?

Yes, I would recommend that you look up the local repeaters ahead of time.
If you forget to do so, you might be able to find repeaters by scanning,
although I would hate to depend on this in a life-and-death situation.

Two other alternatives are the established protocols for contacting help
via simplex - LiTZ and the Wilderness Protocol. I found a web site with
some description:
http://www.durhamradio.ca/litz.htm

<questions about accessing private repeaters/autopatches snipped for brevity>

In an emergency, I would not hesitate to use *any* repeater anywhere.
I would hope that no amateur operator or radio club would be so
selfish as to object to such use. Indeed, I would think you'd get
plenty of help. Autopatch systems are often operated via non-published
DTMF codes, so you will probably have to ask a local ham for help in
using such an autopatch system.

Be a bit careful about counting on ham radio for emergency help. It is
true that you can call out some distance to get aid, but the radio path

might be blocked by surrounding mountains or simply by distance. You may need to climb a high hill to get your signal out, and you may not reach someone when you most need to do so. It ain't no cell phone (but then again, cell phones probably can't work where you'd go anyway). I'm not suggesting that you should drop your plans, only that you educate yourself well about ham radio's capabilities, strengths and weaknesses.

I had a radio along on a family canoe trip into the Boundary Waters of Minnesota. It was only afterwards that it occurred to me we were >25 miles from anything resembling a town, with no hills to climb and plenty of dense foliage to attenuate my signal. I wondered if I would have been heard in an emergency.

Welcome to the hobby, Steve!

Bob, KI8AB

CHU is on 7.335 kHz, which is 5 kHz away, I've never noticed interference on CHU from MARS operators either, so the poing is moot. I note that CHU is really a carrier with only the upper sideband rather than both sidebands, so a station 5 kHz away isn't likely to be heard on a selective receiver.

I have to agree with Hans, while I don't listen to his informational bulletins,
regulary, I don't recall ever hearing something which would constitute a rules
violation during them. Considering all of the other things on 20 meters
and 75 meters to complain about, somehow his imitation talk show
with 3rd party traffic, and his other bulletins aren't quite as offensive
as jammers, and folks who want to insult each other on the air usually
without bothering to give a callsign or otherwise operate legally.

HAMFEST October 25, 1998 - Lindenhurst, LI

GREAT SOUTH BAY AMATEUR RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST-COMPUTER SHOW - OCTOBER 25, 1998

LINDENHURST, LI - NY

On October 25, 1998 the Great South Bay Amateur Radio Club will again sponsor an indoor Hamfest-Computer Show. The location will be at the:

Knights of Columbus
400 South Broadway, Lindenhurst, NY.
This is an ARRL approved Hamfest.

There will be radio equipment, electronic componets, computers and access-ories, softeware, books, technical manulas, ARRL information, Amateur Radio License Exams, Door Prizes.

[SOLD OUT]
Advanced registration is $15.00 each table. Tables at the door are $20.00 each. Contact Peter Portanova WB2OQQ at 516 541-4886 for table reserations. NO TABLES WILL BE RESERVED WITHOUT PRIOR PAYMENT due to the space available.

General admission is $ 6.00. $5.00 with coupon. (Coupons will be available at the door.)

VE - ARRL - 12:00 NOON
For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID),
and the examination fee, to the exam seesion. 1998 ARRL/VEC fee is $ 6.35, exact change is appreciated. Novice exams are free.
The VE team is from ISLIP ARES Group and GSBARC. Thanks guys.

Talk-in will be via GSBARC Repeaters on 146.685 4Z(136.5) PL.

Food Service during the Hamfest will be provided by members of the Knights of Columbus Council.

Information is also available during the GSBARC 2 meter info net every Monday evening at 7:00 pm following the Newsline Report on the W2GSB repeater, 146.685 -600 4Z(136.5) PL required. You may also write to:

Great South Bay ARC
P.O. Box 1356
West Babylon, NY 11704

E-mail GSBARC at info@gsbarc.or or visit GSBARC online at

From: bruce@pixar.com
Message-ID: <70qrsi$4u8$1@atlantis.pixar.com>
Source record: 159661

Rob,

Thanks for your note. Isn't the net wonderful? Write about the most
difficult-to-reach place imaginable and you get an answer from someone
who was there.

I guess Nepal can do what it wants with 2M as long as the HTs stay
out of the _satellite_subband_. That's currently a problem with Guatemala,
they have put taxicabs and so on in the 440 satellite subband and the
sats are repeating their communications over a 6000-mile area.

I would hate to hear of people using this same equipment for practice
climbs on Mt. McKinley or perhaps somewhere in Europe like the Eiger
(where 2M might be authorized but I don't know if that's the case).

Thanks

Bruce K6BP

From: rob_rowlands@my-dejanews.com
! Bruce,
!
! I happened to visit the base camp of an American expedition on the north side
! of Kangchenjunga in May 1997, and noticed that they were using 2M Radio Shack
! handhelds. Perhaps this expedition provided the photos you refer to.
!
! It is my understanding that these were authorized for expedition use by the
! Nepalese government, who are maddeningly meticulous in all matters
! bureaucratic relating to climbing the bigger mountains. Use of 2M by other
! expeditions from around the world probably allows interworking between
! different expeditions that promotes safety in the very hostile and remote
! environment of these big mountains. If suitable VHF/UHF "commercial" HTs
! from the US were used, then these would be nore expensive and probably not be
! compatible with equivalent equipment from other countries - 2M is almost
! universal - and manufacturers' economies of scale reflect this in the price
! of these HTs. For your interest, there were 100 climbers from 9 countries in
! the area when I was there. My personal feeling is that Nepal can do what it
! wants within its borders, though RS was probably unwise to use the photos in
! their ads for the US market without disguising the frequency being used.
!
! You may like to contact Daniel Mazur, the American expedition organizer, if
! you need more info. See www.mountainzone.com/climbing/kangchenjunga
!

Most parts of the country today should have at least one good 2 Meter repeater that can be accessed even from a wilderness locale, especially if you are up on a high mountain where your line of site may be 100 miles or so, you should be able to "hit" at least one good repeater in an emergency. Let me know if you need some links to sites that have repeater freqs and I will e-mail them to you. Good luck!

From Tad Cook, K7VVV
Seattle, WA October 23, 1998
To all radio amateurs

SB PROP ARL ARLP043
ARLP043 Propagation de K7VVV

Solar activity was up again last week, but not by much. Average sunspot numbers increased from 95 to 113.6 and average solar flux was up from 119.7 to 125.9. The big event of the week was a major geomagnetic storm on Monday, when the planetary A index shot up to 52. The planetary K index was as high as 6 and the high latitude K index reached 7. This was all due to a coronal mass ejection on October 15.

Conditions should be fair for the CQ Worldwide DX Phone contest this weekend. There is a chance that coronal holes could disrupt geomagnetic conditions, but on Thursday night the predicted solar flux is around 115 for Friday through Sunday, and a planetary A index for the same three days of 15, 12 and 10. Beyond the weekend, the solar flux is expected to stay around 115, then rise around November 3, to peak near 125 on November 4 and 5. Look for unsettled conditions around November 3 to 6.

KB4NEW sent word about an interesting chart on the NASA Space Science News website. Go to http://www.astronomynews.com, then click on ''Oct 19: Sunspot Activity Increases.'' An article follows which talks about Cycle 23 predictions at the Marshall Space Flight Center, and clicking on the graph will reveal a large high resolution chart showing actual sunspot numbers against a very smooth predicted graph.

W2PAT sent some interesting statistics on PSK errors when detecting data on the CHU signal on 7.355 MHz. His records show an average number of 43 errors on each day from October 12 to 18, but on October 19 the errors went up to 422, the day with the big geomagnetic storm conditions.

Sunspot Numbers for October 15 through 21 were 113, 120, 107, 136, 116, 104 and 99 with a mean of 113.6. 10.7 cm flux was 131.1, 131, 135.4, 125.9, 118.5, 121.2 and 118.3, with a mean of 125.9, and estimated planetary A indices were 6, 4, 9, 10, 52, 17 and 23, with a mean of 17.3.

>Real men read the instructions

Dave,
At Timewave, we sell PK-232 radio cables with the IDC connector already attached. Call or e-mail John Douglas (651-222-4858 or jdouglas@timewave.com).
Timewave also provides phone and email tech support, repair, upgrades and accessories for most of the data controllers built by the former Advanced Electronic Applications, Inc.
Pk-232 owners will be particularly interested in our new PK-232/DSP upgrade for the PK-232/PK-232MBX. It substantially improves the PK-232 performance in the presence of noise and QRM. Check our website for further information - http://www.timewave.com.

73,

Randy Gawtry, K0CBH

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <704>
.....
>From the Editor's Desk:

Have your or your organization given any thought toward helping your public safety agency this Halloween season with a 'Pumpkin Patrol'? This easy to set up communications exercise involves deploying communicators throughout the area to observe and report to any situation that may arise that may concern the local authorities, such as a traffic accident or other emergency. With so many young children on the streets after dark, many police agencies have come to rely on volunteer communicators to give the agency some additional sets of 'eyes' on the street. It's fun, it's a good demonstration of your communications resources, it's great PR, and helps keep the local community children safe. Talk to your agency about setting up a 'Pumpkin Patrol' this year!

Stay safe, everybody -- see you next week! Dave Larton, Editor
.....

>From the Mailbag:

(John Peterson from NASA's STONEFLY Newsletter received this inquiry and has asked us to help. Please send any responses to wrtheuer@alaska.net directly. -ED)

From: "William Theuer" <wrtheuer@alaska.net>

John,

Do you know anything about the convergence of the internet and amateur radio? I previously have taken digital photos on location during emergency response but had no method to transmit the images from the field. In parts of Alaska, there is no cellular service. What do you know about using packet radio to send data?

I would like a solution which incorporated GPS with image or textual data connecting my laptop through a TNC to a dual band hand held transceiver. It might be interesting if I could use this system with an amateur satellite? Any suggestions would be timely and appreciated. I haven't purchased any radio equipment because I have not quite finished my no-code tech class. If any of our volunteers are knowledgeable maybe they could send info.

Cheerio, 73
William

Current Events:

From: Dave Colvin <ppddgc@JULIAN.UWO.CA>

There is an excellent conference coming up in Windsor Ontario (Nov. 9 to 12) that may be of interest to List members. Sponsored by APCO (Association of Public Safety Communications Officials) Canada, it is attracting speakers from across North America.

Some of the seminar topics include:

- Bigger and Worse Disasters - Lessons from the Great Ice Storm of 1998
- Death in a quiet Cove ^ The Crash of Flight 111
- 3-1-1 on track in CHICAGO
- NYS EMS/Fire Amalgamation Update

It is a really affordable event... for complete details, see their website at: http://www.apco.ca/

(For US visitors, Windsor is conveniently located across the river from Detroit and the convention site is right downtown. Day passes are available.)

What's New on the Web:

From: "Robert W. Sanford" <rsanford@pipeline.com>

ABAG Offers Earthquake Information

October 17 is the ninth anniversary of the Loma Prieta Earthquake and a regional agency is advising residents of the Bay area to remain prepared for the next big one.

The Loma Prieta quake struck at 5:04 p.m. on Oct. 17, 1989. The magnitude 7.1 temblor, centered in the Santa Cruz area, caused widespread destruction throughout the region -- and some deaths, most resulting from collapse of the Cypress Structure freeway in Oakland. The Association of Bay Area Governments has a number of reports available at its website: http://quake.abag.ca.gov

There are copies of hazard maps showing earthquake faults, a study of the projected effect of a quake on housing units in various area and an analysis of the impact a major quake could have on transportation in the region. There is also information on such quake hazards as liquefaction and dam failure. Residents who do not have access to the web can call ABAG at (510) 464-7900 to purchase reports, CD-ROMs or hazard maps.

This week's EMCOMM Bulletin:
EMC154 Keeping up with Disaster Communication Technology 3/3
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio
By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC154 Keeping up w/ Disaster Comm. Tech. 3/3 10/19/98

Joel Kandel KI4T ARRL Technical Coordinator, Southern Florida

Reprinted from QST Magazine, October 1998, with permission from the author.

"What would that mean to the image of Amateur Radio? It would mean that they would be thought a lot less of in after-action reports, and eventually be taken less into account in the Comprehensive Emergency Management Plans of local emergency management agency. Eventually Paragraph 97.1 (a) of the FCC Regulations, the primary reason-for-being of the Amateur Radio

Service would come to have less meaning:

"Recognition and enhancement of the value of the amateur service to the public as a voluntary noncommercial communication service, particularly with respect to providing emergency communications.

"We must make the effort to learn about the new technologies, integrate them with Amateur Radio if technologically and legally possible, and continue to develop ourselves as "communications commandos" who are masters of all emergency communication technologies. I believe it is a matter of our survival as a radio service.

"To this end, I have asked the Telecommunications Committee of the Florida Emergency Planners Association (FEPA) to make available training to all ARES and RACES members in the new technologies that are adopted by county and state emergency management agencies. These should include radio systems, computer systems, satellite communication systems, Internet uses, disaster management software, telephone systems, weather systems, and any other technologies that the ARES or RACES members may come in contact with during a disaster.

"Start at your end as well. Do a mental inventory of systems you are not familiar with at your respective EOC's and inquire how your group may receive training on these systems.

"The investment in training by the emergency management agencies are minimal compared with the potential return on investment: namely access to telecom specialists who are willing to master these technologies and be available to manage them during a disaster. When it all blows over, we will be remembered for how useful we were to the response effort; not whether we were using our own equipment or just doing a better job with someone else's."

(End of series)

Joel Kandel KI4T, is a veteran leader in the public service community, as an amateur and as a professional in the telecommunications industry. He is a former chairman of the ARRL National Emergency Response Committee (ANERCOM), and a member of the Blue Ribbon Committee on Emergency Message Traffic, and the Public Service Advisory Committee. Joel was the author of the QST article on the amateur radio response to Hurricane Andrew.

Bruce,

I happened to visit the base camp of an American expedition on the north side of Kangchenjunga in May 1997, and noticed that they were using 2M Radio Shack handhelds. Perhaps this expedition provided the photos you refer to.

It is my understanding that these were authorized for expedition use by the Nepalese government, who are maddeningly meticulous in all matters bureaucratic relating to climbing the bigger mountains. Use of 2M by other expeditions from around the world probably allows interworking between different expeditions that promotes safety in the very hostile and remote environment of these big mountains. If suitable VHF/UHF "commercial" HTs from the US were used, then these would be nore expensive and probably not be compatible with equivalent equipment from other countries - 2M is almost universal - and manufacturers' economies of scale reflect this in the price of these HTs. For your interest, there were 100 climbers from 9 countries in the area when I was there. My personal feeling is that Nepal can do what it wants within its borders, though RS was probably unwise to use the photos in their ads for the US market without disguising the frequency being used.

You may like to contact Daniel Mazur, the American expedition organizer, if you need more info. See www.mountainzone.com/climbing/kangchenjunga

Best regards,

Rob Rowlands ZL2AXQ
San Francisco

Yes, and as long as old timers complain about the consequences
instead of offering to help, it'll never change.

> Here is a list of the new annoyances, that are driving alot of us
> nuts!!!!!!!! Things not to say.
>
> * The continous asking for a signal report, or how am I sounding, and doing
> it through a repeater!

Yes, we probably have a Newbie here who is interested in using
his/her new radio, and doesn't know how to initiate a random
contact. Instead of replying and introducing yourself, just ignore
the user and be annoyed. Better yet, two minutes after the request,
call your buddy on the same frequency and begin a conversation as
if the person was never there. Whatever you do, DO NOT offer a
forum for the newcomers, such as an evening roundtable net for all
on a popular repeater. That would only encourage them. If you
ignore them enough, they might go away.

> Referring to a signal report in "pounds".
> * 10 codes........

Yeah, I liked it better in the old days, when you heard "fine
business, old man!" every 30 seconds. These new guys have no
respect for the old traditions, when we spoke clearly and without
those annoying catch phrases.

> using a repeater, when the person you are
> talking to, is two cars in front of you!!

Yes, you NEVER heard of THAT practice in the old days...uh...right?
Operators were much more likely to tie up a frequency across the
entire continent by ragchewing across town on 80 meters with their
kilowatt for hours and hours.

> Referring to a signal +10 or
> stronger, as the strawberry patch!!!

YEAH! Those of us who've been around a while know that the proper phrase is "you're full-scale, old man"!

> Using Q signals on phone!!!

Yep, we never heard THAT before "restructuring" - it's completely new...

> * Unnessary lingo, such as:
> I heard that, I did.................Thats for sure.............making
> the trip...........I guarentee you..... Channels..... boy, your
> loud!!!....the constant use of the word, "there"......and the list goes on
> and on!

Once again, I'll say..."Fine business, old man...". I guess that's what happens when a particular group is singled out as pests. Instead of talking to the old timers and keeping the old ways, they seek each other out and establish their own culture, completely forgetting about old timers in the process. Not exactly what old timers had in mind - approaching with heads bowed seeking approval and acceptance, is it?

> Why can't we just talk?

An excellent question! - Remember that the next time you hear someone new and unfamiliar on "your" repeater.

> Whats the next step, testing sessions in truck stops?

WOW! Imagine all those trucks out there with radios scanning for a call. The next time you call on 146.520 from the middle of nowhere 'cause your engine overheated, there might actually be someone in range to help you!

> How about a Ham fest at the weight scales???

Now that's an idea! A very high-profile way to expose Amateur Radio to the travelling public - get started right away!

> Yeah, I know its ridiculous, but none of it would shock
> me!

'Bout the only thing that would shock me is seeing the old farts supporting and encouraging the next generation of operators instead of alienating them. I find the new Hams' interest and enthusiasm refreshing, and enjoy the gratitude and respect I'm shown after spending an evening in the shop helping one build a regulated DC supply for the new rig, or a two-meter beam antenna. It's kind of nice to know the the only thing to worry about at the next antenna-raising, or when the time comes to drag the new repeater up to the hilltop, is finding enough coffee cups to go around. Not to mention the fleet that's available during the next public service event or emergency. - Oh, but I forgot, to participate effectively in events requires us to encourage and train them, and we're trying to alienate them so they'll either kiss our butts

first, or go away.

> Oh, and PLEASE refrain from giving "mile markers" over Ham
> Radio.....geeezzz!!!

There's one marker I'll make sure they never fail to give. It'll
rest over the old timers' heads after their last QSO, and it'll say:
"Here lies the previous generation of Ham Operators - and the
arrogance and intolerance that went with them".

I agree, I've totally given up on trying to listen to 2 meters
especially through the repeaters. The worst one I always hear in my
local area is "Roger Roger," please, give me a break with some of this
crap on the repeaters people! Most of these people that are so strung
out on only talking on the repeaters or think the whole amateur band
revolves aroung 144-148 MHz I would'nt give you two squirts of piss for
to begin with, and that's just my two cents worth on the matter.

Jeff,

I'm no fan of K1MAN, but I have never heard him commit any rules violations on the air. Can you identify any credible person who has witnessed a rules violation from his station?

(Note that the following are not acceptable "credible person equivalents":

1. Dogs, cats, flying insects and other life forms, regardless of whether they possess human names.

2. "Patti Port-a-Date," "Mr. Sta-Puft," and similar inflatable companions.)

That's the truth. Anyone who knows me knows I am not lazy, especially where my hobbies are concerned. Ham radio, being one [just one] of my more passionate interests, gets its share of my attention. Problem is, I see new modes, new activities and new developments nearly every day. At first, I say to myself "Wow! That's cool! Bet I could do that too!" Then reality hits. 9k6 packet, for example, requires a better radio than I have, deviation monitor and other test equipment, time to learn the theory and time to develop a workable set-up. What do I give up in my life to try it out? Where does the money and time come from? Sorry, but until 9k6 is an appliance, it won't be seen in my basement. Other pursuits in ham radio - and other hobbies - have already claimed my time and money. Does this make me a "lazy ham"? Nope. It makes me appreciate the people who *have* put their enthusiasm to work for the betterment of the amateur radio community, however.

I meant I can afford only one VHF/UHF rig, and it's got to be an HT,
due to my pattern of use.

> You can also use the mobile rig at home, use a slide mount so
> you can move it easily from car to house and back. All you need

> power too).

I rarely operate from home. I operate from my car or my wife's car,
from my office, and from the host of other places I've already listed.
Only about 25% of my VHF/UHF operating is in places where a mobile
[rig <sigh>] would work.

> The only advantage of the HT is that it can be hung on your belt
> when you're walking about. That's a bit tough to do with a mobile
> rig and gell cell unless you have an Alice rig to keep it from dragging
> your pants down. :-)

This, Gary, is the advantage that makes ALL the difference to me.

I ran a license class for Boy Scouts last year, and plan to run it again
soon. They use their radios for car-to-car (in whatever car comes with
the volunteer driver) and in the back-country. Even gel-cells are *not*
carried by serious backpackers. I am careful to explain the pro's and
con's of the various radios, but these guys are examples of a large class
of ham radio operators who need HT's. How many others might be out there
listening to your condemnation of HT's and not realizing the tradeoffs
involved? Many, many I suspect.

I respect your opinions (and indeed have started to pine for a mobile rig), but please - if you are recommending rigs to newbies, do not just insist that they buy a mobile. At least take the time to point out the situations that might make an HT a valid choice for their only radio. If you do not do so, you are *not* doing them any favors.

How about ONE license? You pass the test, you get the license and the
privileges. Simple. No more caste system. Of course, this would eliminate
layers of bureaucracy, so neither the government nor Oldington will approve.

>something?

Bring the book (it is pocket size). Depending on terrain, you may not be able
to hit *any* of the local repeaters. But you may be able to hit a distant repeater.
Or maybe not. Perhaps the best choice is to run one of the terrain analysis
programs which can plot signal contours on a geodetic survey map, and bring
the map. That way you'll know which repeaters may be shadowed from your
location, and which ones might have a chance of receiving your signal.

Do realize that no one may be monitoring the repeater when you call. In many
areas, the repeater is only used during commute time. The rest of the day and
night, no one may be listening.

>* Some repeaters are available only to members of the clubs that pay for them.
>While not disputing the principle, how does that work when you are traveling
>away from home? If I have a wilderness emergency, am I limited to the range of
>my HT without a repeater?

Some repeaters are "closed". IMHO that's a despicable, though legal, practice.
Often, however, there will be one or more repeaters in an area which are dedicated
to the travelling amateur. One of the oldest machines in the Atlanta area even
IDs as "serving the travelling amateur". They are there for your use, as well as
the use of the locals. In an emergency, even a closed repeater group should
permit you to use their machine. But the problem is that you may not know the
access method required to bring it up. In that case, no one will ever know you
are even trying to use it.

>* Some (most? all?) autopatching services on repeaters are available only to
>members of the clubs that pay for them. Again, while not disputing the
>principle, how do I access autopatch while traveling away from home -- for
>example, in the wilderness? Am I limited to seeking help only within the range
>of my HT?

Autopatch codes are nearly always kept confidential today. It wasn't always that way. At one time, most patches were star up and pound down, but that went away due to too much abuse. Some repeaters would respond to 911 by autodialing the emergency services, but that's mostly gone now too due to abuse, and due to the way the E911 system operates, IE emergency services were dispatched to the *repeater site* because that's the address which shows up on the E911 console. After a number of "false alarm" runs, emergency services started *fining* the repeater trustees. That ended that practice for many.

Now the rules say that a control operator must be present any time the patch is in use, so that's your out. Just call for the control operator and let him make the call for you. If no control operator responds, then the patch isn't legally available anyway, so the matter becomes moot. It is doubtful that you'll find a repeater with a patch anywhere outside the US in any event. Most nations don't have as liberal a third party traffic policy as the US does.

When I'm in the back country, I do carry a HT, but I don't depend on it for emergency communications. I carry a cellphone for that, and a small beam to extend its range. That works in the areas where I go, though I occasionally have had to climb a bit to hit a cell. If I were out of the country, or in some very back country part of the US, I'd carry a satellite cellphone. That works anywhere, anytime. They're now under $1,500, including a built in GPS, for Imarsat, and I figure my life is worth at least that much. That price should fall as Iridium, Teledesic, and some of the other satellite providers come on line.

Note that if you do decide to limit yourself to just a HT, at least get one of Arrow's walking stick yagi antennas to use with it. That gain may make the difference between being heard and not being heard in an emergency, or even just for fun. (An alternative is a J-pole made from twinlead that you can hurl into a tree. Not as good as a beam, but much better than the rubber dummy load on the HT.)

While there are exceptions, especially if you are in the high country, don't expect much more simplex range from your ham HT than you'll get from FRS radios. To use a handheld over extended distances, you need a good repeater to do most of the work.

Now the ideal repeater is a satellite. There are a few hamsats you can use. AO27 can be worked with a dual band HT and a handheld beam. But it isn't available very often, and is often dominated by high power alligator stations when it is, so it may not serve. You can also access the pacsats. That's better. You can usually get in every visible pass with just a HT, but you'll also need a TNC and computer (a PacComm micro TNC will do, and you can use a palmtop like the HP95 that I use). It is possible to do that while backpacking without becoming a radio mule. Frankly, though, I'd reserve the amateur gear for fun and depend on something more reliable for emergency comms.

It is a usenet term dating back to the early days of the net. It may have crossed over to amateur radio due to the large number of amateurs on the net.

You were given false information. It is perfectly legal to use
commercial radios on the amateur bands (assuming you have
an amateur license of course). There is no Type Acceptance
for amateur equipment. You can use *anything* that emits a
clean signal, and these radios certainly do.

There is a catch, however. If you have to physically modify
the radios to get them to work on the amateur bands, you
may have voided their Type Acceptance for use on the
commercial bands. But if I recall correctly, there are no
physical mods required of the radios you list to get them
programmed onto amateur frequencies. So you should
be good to go. The only drawback is the limited number
of channels you'll be able to program into them.

Outside the Region 2, the ham band (in Nepal, etc) is 144-146 Mhz
and 146-148 is commercial or public safety....144-146 IS amateur
world wide by international law and treaty....BUT....
I dont know what freq was displayed on the dial; if it were a
146-148 Mhz freq, it was probabaly 100 % legal there....

Would a nuclear driven EMP pulse wave shut down all these modern CPU
enhanced rigs? I think maybe the old glass rigs would fare better.

Yaesu makes the best HF rigs in my opinion. There is an article in QST, October 1997 on the FT 920. Check it out. The FT-1000 is the rig to get.... but it has a big price tag.... You can get a FT-920 for at least $1,000 less. I don't think you will go wrong with the FT-920.

My opinion,

Bruce,
you obviously are not up on International law/treaty...the 2mtr band
is 144-148 ONLY in the US, possessions and Canada and most other
parts of Region 2 of the world....in Europe and Asia, 2mtrs is
ONLY 144-146 MHz....the 146-148 is commercial......JUST because
it is so here does NOT make it so there...

Hi.

I would like to know if anyone is interested in buying the e-mail address such as yourcallsign@radiotelephone.net

I don't mind selling it for $1~$2/month per one e-mail account (no spam allowed).

I just wanted to see how many people would be interested in such deal.

Thanks.

This number drops each year. Ham radio is dying, and the declining number of those having affiliation with Oldington reflects this trend.

I'm sure you'd love that Dumbo, that way your lame ass could get on HF legally
and you wouldn't have to upgrade to General, which seems to be quite a hurdle
for you.

As in "I am famous."

Please visit my World Wide Web Site, you have never seen a page like it.
You will see:

1. How to pass the A+ Certification
2. See Hillary do something naked.
3. A blond naked chic being held by a female ham!.
4. Take the Burt Poll, about Clinton ham spouses, girlfriends
5. Attacks against Burt K1OIK's opinion of ham radio in a national publication
for broadcasters
6. Burt's opinion on the First Affair in the White House with a picture of the
new fist couple.
7. The writings of me and others on ham radio, hear a typical ham contact.
8. The warm side of K1OIK, hear me speak, see me with famous people.
9. A test for your SVGA monitor
10. Pictures of me and my family.
11. Did common German's enable the holocaust?
12. See now the future of ham radio.

>Nevada, say, I should find out the local repeater frequencies ahead of time,
>write them down, and bring them with me. Is that all correct, or am I missing
>something?

Some new HTs have an auto repeater offset feature, so all you would have to
do is tune around the band and stop on an active frequency, the rig will use
the proper offset (I.E. -600 or +600). Some repeaters (not all) use PL tones,
you'd have to know which tone it uses.

>* Some repeaters are available only to members of the clubs that pay for them.
>While not disputing the principle, how does that work when you are traveling
>away from home? If I have a wilderness emergency, am I limited to the range of
>my HT without a repeater?

If your in need of help use ANY REPEATER you can hit. NO ONE will refuse you
assistance I'm sure.

>* Some (most? all?) autopatching services on repeaters are available only to
>members of the clubs that pay for them. Again, while not disputing the
>principle, how do I access autopatch while traveling away from home -- for
>example, in the wilderness? Am I limited to seeking help only within the range
>of my HT?

To use autopatch you must be in range of a repeater. If your NOT a club
member but in need of help most clubs SHOULD allow you to make an emergency
call with no problem, certainly someone listening could make a call for you if
need be.

Good luck on your test! Let us know how you do!

73,
Tom

Well, PROVIDED the "opened up" radio is being used for the protection of person
or property I'd say such an act is COMPLETLELY LEGAL owing to the "use any
means available" clause in the FCC rules. I'd have to re-read to see if this
applies only to hams - whether or not the guy is a cop is irrevelent...

1303. A question.....

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-24 00:00:00 UTC
From: spack@ezwv.com
Message-ID: <3631756c.0@news.ezwv.com>
Source record: 159678

I have a question for the Hams out there.

I am a paramedic studying for my amateur radio license and have the
following "commercial" portable radios:

Motorola MT1000 VHF 144-176 mhz

Motorola MT1000 UHF 438-470 mhz

I was told by a licensed ham that it would be illegal for me to use
these radios on the 2 meter or 70cm amateur bands because they were
"professional" radios after I recieve my ham license.

The EMS services I work for operate in the 450-460 mhz and the 155 mhz
ranges. I thought it would be nice to be able to use these for ham
radio and not have to buy another radio right now.

Is this true or am I being given false information????

Thanks.

Steve

> hardly an old timer.....

I've always considered an old timer to be a state of mind, rather
than a specific age threshold.

An individual with years of experience, who has kept up his
knowledge and skills, and is willing to share them with beginners
is an absolute gem - and there's plenty of examples of this in the
rec.radio.amateur.* groups.

For those who spend their time critisizing the way things are while
making no effort to contribute in a positive manner, if you were
offended by my post, then good - it's exactly you that I had in
mind. Unfortunately, there's also plenty of these individuals in
the groups. There seems to be plenty of them on the air, too.

Hi folks,

We have a new addition! The Crystal Swapping Bulletin Board!

Sell those unwanted rocks & put them to use!

Or even give them away to someone who needs them if you wish!

Now you can find CRYSTALS for your radio FAST!
Post instant ads and find just what you need. Look through the listings and you may locate just what you need in a hurry!

No more waiting days or weeks for your ad to appear!

FOR SALE, TRADE and WANTED ads are welcome
You can even post a list of frequencies.

Visit today - Check out:

http://pluto.beseen.com/boardroom/b/21532/

And a thank you to everyone who has supported the old Crystal Swap Page at:
http://www.mnsinc.com/bry/xtalpage.htm

It will remain up until the new page is fully charged up with ads!!

What this person told you was wrong. You can program your commercial
band equipment for amateur frequencies and use it in both services
(assuming you are licensed for both) but not the other way around. You
cannot legally use modified amateur equipment to operate in the
commercial bands.

Good luck on getting your ham ticket.

False. Commercial equipment can be used on the ham bands. Apparently this individual (wrongly) assumes that you can't have transmit capability in more than one band on one radio. Look at it this way: commercial radio certification is more stringent than that for ham rigs, so HTs like yours exceed the ham requirements. Use them all you want and have fun!

That is *exactly* the same thing that W1AW does. If you want to complain
about K1MAN doing it, you have to complain about W1AW doing it too.

You can't claim this is intentional interference, at least you can't in the
case of W1AW. That's because they *don't even have a receiver* tuned
to their transmit frequencies. So they can't be intentionally interfering
with you because *they don't know you're there*. W1AW just fires up
those Harris broadcast transmitters of theirs and lets fly without even
the pretense of listening first.

IMNSHO, if they want to play broadcaster, they ought to get a broadcast
license and do it in bands designated for that use.

Bad info, or you got it 180* out of phase!

Hams can build, or modify, equipment for their use. Its one of the great things about ham radio. So go ahead and use them on 2m or 440MHZ.

BUT..... it is not legal to use ham equipment on non-ham frequencies(MARS excepted). Ham gear is not subjected to the requirements of "Type Acceptance," and equipment used in commercial service must.

More HAMBO mis-information. It is perfectly legal to use commercial radios on amateur frequencies. What is not legal is the use of amateur radios on commercial frequencies. This is because amateur radios are not type-accepted for commercial specs.

Which brings up another big myth: HAMBOS mistakenly think that everyone who purchases a modified 10-meter or other amateur radio does it so that they can bootleg in the ham bands. Not so. Most freebanders have no interest in transmitting above 28Mhz. Why would they WANT to? Conversations with "real people" about "real life" take place on the freeband. Above 28Mhz, it is an endless procession of robotic-sounding operators, mumbling the standard phrases of "my QTH is...the weather here is...my 10-10 number is..."

zzzzzzzzz......

Guess we are lucky in Fl. The system is far from perfect but provides 90%
reliable connection on the direct connect(2 way radio) statewide except
tallahassee...the state capitol...figure that one out.
System in calif works well too. I have a business there and use it from LA
to Vegas. I have a plan for $50 per mo. which incl. unlim. 2 way radio.
I find the NEXTEL people to be very interested in improving servie. My
salesperson said, honestly, that many system have been oversold and cant
yet handle the load. That is sad.Like overbooking a flight.

Assuming you don't want to buy another antenna, try this

(1), turn down your power to the lowest possible to reduce "activating" the distant machines

(2) turn you squelch up (if those machines aren't full scale) as high as possible to receive the local repeaters and filter out the distant

Really other than moving or getting a different antenna system you are a perfect example of a great location working against you

Good luck

Some of the things that I have done to help with this common problem:

If you have receive decode ability, you can set your rig for encode/decode for the machines that use a PL tone. For those that do not you can try 1) setting your squelch just low enough that the local repeater will break it, or 2) switch to a directional antenna and point it at the machine of interest.

I've had mine 3 years now with no problems. The DSP noise filtering is very effective at my noisy location. It picks things out of the noise my TS50 won't. The only annoying thing for me is that one of the several fixed auto tuner bands changes at 7030. Everytime you cross the freq the tuner activates to the new band memory setting. If you don't work CW it won't bother you. The manual gives you the control codes so you can write your own custom control programs if you want. As with most modern rigs repair by the owner is unlikely. And from what I've heard about Kenwood service you better hope it doesn't break.....

1339. IC-Q7, clone, 0-30MHz, here it is.

Newsgroup: rec.radio.amateur.misc
Date: 1998-10-25 00:00:00 UTC
From: Ingra-Beton@t-online.de
Message-ID: <70uop9mbc2@news00.btx.dtag.de>
Source record: 159546

Since 02.08.98 we all know that the IC-Q7 is PC Programmable,
a great thank to OK1OMX, and his page http://www.hamradio.cz

The Interface is a simple OPC478 compatible interface that ICOM
Uses for all radios, you can use also the interface for the YAESU
FT51/FT50/VX1 or any other HALFDUPLEX RS232 to TTL converter, there
are many variations on the web.

You can find a VERY simple one at http://www.hamradio.cz
The parts are not more then 3 US$ or 5 DM.

So here is the first complete Software solution, with this
Software you can do everything that is allowed by the Firmware,
and beyond.

You can download from http://home.t-online.de/home/Ingra-Beton
the current 0.99 beta version.

The most interesting thing is entering Frequencies below 30MHz,
Yes, yes, the IC-Q7 is complete capable receiving down to 0.5MHz
and below, it has the same (or almost the same) receiver part
as the IC-R2.

The IC-Q7 has excellent sensitivity in the 0-30MHz.

The current Software only demonstrates this capability, full
Implementation to up/download 0-1599MHz Frequencies and opening
a WideRXMode do dial from 0-1599MHz (without gaps) will be
implemented in the version 1.00 (in a couple of weeks), after
clearing bugs and solving some little problems :)

Bugs, suggestions,... to my Email please.

Greetings, ...

Thanks to: Riku Kalinen (OH2LWO), Eric Free and OK1OMX
Hey Riku, I have vorgotten you in the readme.txt, sorry :)

I am a NEXTEL "direct connect" (2 way radio) user in Florida.I do not have any connection to Nextel Comm. Although I
am a ham radio operator, I have found this service to work extremely well for statewide communication and have met a lot of nice people on NEXTEL'S system who also
like to engage in casual conversation.See my website at
http://www.geocities.com/SouthBeach/Coast/2863
If you are on Nextel in Florida and subscribe to the "statewide builders fleet(network#35043), or want to know how to do this, I'd like to add you to our growing list of like
minded NEXTEL users.
Hope to hear from you soon and please check out my website.

Nextel in Massachusetts and Rhode Island suck. Disconnections because of lack of towers, time delays in the transmissions and a hefty fee for the equipment make Nextel no bargain around here.

I've been running my TS-50 from the cigarette lighter with a ground strap under the dash, and a coax thru the window to a hamstick on a mag mount on the roof of my pickup.

I've worked GREAT DX this way with typically 5x7 and 5x9 signal reports.

I recommend you DON'T bumper mount, as this creates a lousy ground plane to radiate off of. Definitely roof mount if possible, and the mag mount (3 big pancake magnets) is the way to go.

IMHO - Rudi - KF6RLQ

But it is very important to have a ground strap directly to the chassis when using a mag mount. Those magnets are not enough capacitance to ground to function well on the lower frequency bands. W8JI has reported arcing without the ground strap.

Most tube type gear runs on AC power. There wouldn't be any
of that coming out of the wall sockets. Your AC generator
probably has solid state controls and wouldn't work.

Thanks for the very good information, Gary. I've thought
that EMP would almost surely have similar characteristics to
lightning, IE being a huge transformer primary to every
conductor within range of the EM pulse acting as secondary
windings and inducing voltage, each acording to it's
proximity, length and orientation to the EMP wave. What was
missing was any information as to the intensity of the EM
pulse generate-could it really be that much more intense
than a lightning superstrike? Information on this was
elusive to say the least. You have shown that research says
it is NOT as devastating as once thought.
This clears the way to mitigate its effects.

> The hazard is to equipment connected to long exposed conductors. While

> to the telephone grid because the cummulative effect becomes huge.
>

I had always thought the best way to mitigate an EMP was
the same as lightning mitigation--unhook all equipment from
all associated wiring--both antennas and power mains, as
well as ground. Of course it can't be used unhooked, and
vastly more sophisticated means of mitigation for lightning
and EMP must be employed for gear that is kept in service.

But it means that your backup rig sitting unhooked and idle
on the closet shelf should be pretty well immune and will
survive to be placed into service.

> below 11 VDC, you've found your culprit.

I'm not so sure that this would cause what you see. When I trasmit on my
8100, my voltage often drops to below 11 Volts, and I've never had a problem.
I talked to Yaesu about damaging the radio, and they said that 11.2V is just
what they want to take responsibility for ensuring proper operation for...in
reality, I was told that the radio will operate properly well below that
"limit" And that is the case that I have found. Also, the built-in voltage
meter on mine always reads low, and cannot be corrected following the
instructions in the manual ---- To get me quicker, please email me at
darell@jps.net
